Oh dear.. this sounds just like IRC went through a phase with me... Did I
suggest before playing around with the amount of memory you have allocated it in
the default.scr?.. When I had mine too high I kept getting bombs. I've settled
for 200000 now, and its worked FAULTLESSLY for quite a while.

I used to /love/ that game and got pretty far. There is no "solution" to the magic, you have to work it out for yourself. You do it by using the icons on the right of the screen to make different combinations. When you have got a combination click on it and see if it has an effect. You have to work out what the spells do. Keep practising them and the characters improve at them.

Hope this helps.

3556. What is a good picture converter?

Newsgroup: comp.sys.atari.st
Date: 1996-02-19 00:00:00 UTC
From: Stephen L Harding <sh5655@bris.ac.uk>
Message-ID: <Dn0wqq.B1@uns.bris.ac.uk>
Source record: 150222

I am looking for a screen converter to change daft PC screen formats esp. 16 colour Gifs into ST neochrome or uncompressed degas format. The only problem is that my ST is currently out of commission.
I was wondering if anyone on the group knows of a decent program to do the conversion at the PC end. If you do then please E-mail any infomation you have directly to me at sh5655@bris.ac.uk.

Thanks!
Steve.

> and it just freezes, with the sound effect of a locked game !

I had the same problem - I couldn't work out what was going on. I reset my machine a couple of times and got the same problem.

Then for some unknown reason I turned on my printer while the game was stuck, and the cycles started moving. I turned the printer off again, and haven't had any problems since. My guess is the program looks at the printer port for some reason. So if you've got a printer, maybe you should unplug it to play.

BTW - I have an STE, TOS 1.60, 4Mb, Canon BJ10sx, Minis 105Mb HD / Link setup.

Hmm, interesting - and would you like to hazard a guess as to who my CPU lecturer is??
The bloke who was chief engineer of the ARM! (Professor Steve Furber) He knows his stuff
pretty well so I'm not going to argue with him. Well, anyway, his notes say...

"They have also announced the 'Coldfire', a new processor architecture based on the 68000
but with many instruction set features omitted. Coldfire is:

* not backwards compatible with the 68000
* about 3 times faster than the 68060!"

I'm no expert in this area, so I guess I'll leave it there :-)

S.Lai

P.S. Yes, the notes also mention the Coldfire in embedded systems...

: If the latter corresponds to the the file you want to download, use the
: cursor-left key to back out of the '=' display and then type 'D'.

He might have used lynx to download the file. If you (or the sysadmin)
set up the lynx.cfg to allow Zmodem downloads, when you press D to download
the file, you have two options: save, or transfer using Zmodem. For some
reason, lynx transfers the file as .html, and simply passes this filename
to sz. It's a nice feature, but one I stopped using some time ago.

This is at least lynx 2.3. Perhaps 2.4 has fixed this?

>
>are you useing JAR or something else?

I'm not using JAR but HSMODEM. My system is very similar to yours:
TOS 1.4, autobooting neodesk and some other autofolder programs as well
as accessories. All ACCs and Auto programs are loaded thru a little
program called LOADER which allows you to choose the programs needed
during your next session before set up. But I can't imagine that this
is of any interest for you. It should run with normal setup, too.

Make sure that your autofolder programs are loaded in the right order
(see neodesk manual). Anyway, I never had the slightest kind of problem
running it and I have no idea what's the trouble at your site.

Hope you can fix it,

Yours

Alex

Don't be dim! The game looks at the printer port to check if a four player adapter is present.
Simply leave your printer on, or disconnect it and all will be well. Maybe, a four player adapter
is a good idea, I like it!

Scott.

Why not check out "ftp://sunsite.doc.ic.ac.uk", they have loads of maps, cheats and magic guides
somewhere near "packages/atari/umich/Games/...". The same goes for Chaos Strikes Back too!

Scott.

This is one of the advantages of STOS... GEM based programs cannot do this...

>Photochrome, a non-STOS program has the same ability.

its also non-GEM...

>If this is the case, and it is so easy for all STOS programs and
>Photochrome to manage it, then why isn't it possible to have a small program
>or .acc that you can run which will change the screen resolution for you
>without having to re-boot the whole system?? :|

This only works if the program does not use GEM. when you change video mode, the VDI routines are informed, as is Line-a (I believe). however GEM is not informed, so all of the dialogues etc. will be wrong. Under MultiTOS, it is possible for a program to request a resolution change, but all programs (including the requesting program) must terminate, making this pointless.

Perhaps this could be addressed in XaAES? (I guess no use to you Alistair though..)

Actually, you find scrolls that tell you what to cast. Each symbol has a
name and the scrolls will say something like, "Cast Zo to open doors".
The first set of symbols are power symbols then after that you get into
the actual spell symbols.

Some BBSs or ftp sites might still have the text files that explain the
spells.

Hi,

You can not use a standard PC tower unless you modify the backplane of the case. This is not easy.

To get a Tower case contact System Solutions. They can hopefully supply Big Tower. Big Tower is made by Hard & Soft in Germany, and it is very nice. Avoid Desktopper, as it has no power supply, and it is uggly!

If System Solution is unable to supply Big Tower, order one from Hard & Soft in Germany. If you want the address or you have questions concerning Towers for the Falcon, please send me an e-mail.

: Does anybody know any way to attach an Atari TT030 to Ethernet? I have
: seen various texts discussing AMD Lance cards (attached via mods),
: D-Link Parallel port adapters, and Riebl cards. Does anybody have any
: experience with these, or know where I can find one?

Hello everyone!

For a TT the obvious way would propably be to purchase a single height
VME Ethernet card. The problem is that it will propably not come with
any driver (at least neither for TOS nor for MiNT). However you should
be able to do one yourself with the docu that comes with it. To implement
the protocols you can use the TCP/IP package from the Technical University
of Vienna (Austria) as a starting point. They did an Implementation for
the Riebl card (which is no longer availible because the manufacturer has
gone bancrupt...). If your card is equipped with a LANCE chip (which is
quite probable) you're lucky: the Riebl card has one too so you will only
have to make minor modifications to Vienna code.

Hope that helps.

Thanks to all for the comments on uninstalling minixfs,
After reading the instructions for minix.ttp, I managed to un-install
it, I suppose that's where I should of started !!!
This would of been okay if I just wanted to use the partition but I
also wanted to resize it.
For those who asked I use SDManage, who's partition headers seem to
be an odd size !, so had to re-get the partition header from disk to
resize the partition.
Well that's not the end of it, I want to re-install the minix
partition but..... I want it big ! even though the partition is
100MB but I only get one of 15MB so someone HELP !!!

Thanx again
Ade.

Source record: 150248
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Eric March (diehl@io.org) expounded:
: My editor recently lent me a Keyboard Gizmo from Chro-MAGIC to allow me
: to use a PC keyboard on my Atari. As my Mega ST's keyboard is slowly
: dying (keys are becoming _very_ unresponsive) I figured this'd be ideal.
: Problem is, the Keyboard Gizmo's designed to plug into a 1040-type
: keyboard connection (i.e. 8 pin) and my Mega's keyboard is a 16-pin.
: I've mailed Jim Collins about it, but I havn't recieved a response yet,
: so I'm trying here. Anyone know if it's possible to hook this gizmo up
: to a Mega ST?

That's odd. I wonder if Chro-MAGIC made more than one model of these?

We have one at home that's connected to a Mega 4ST. All we had to do was
to disconnect the little J-connector from the back of the Mega keyboard, and
plug it into a matching socket on the Keyboard Gizmo. There was another
round din-style plug for the PC keyboard.

This is not to say that we haven't had problems. The Mega requires between
two and five reboots before the PC keyboard starts working. The manual for
the gizmo doesn't say it right out, but it does imply that the Mega ST's
power supply may be marginally sufficient to power the device.

>He recently got hooked on a rather old game, Dungeon Master.
>Alas, with no docs he is stuck.

First, there is a good chance that you can still get the rule book form the company. It will be very helpful.

Second, you can do magic by experimenting. There is a little box that has funny symbols in it. You say a magic spell by pressing on those symbols. A spell has 2 to 4 symbols. The first one is always the strength. The rest of them determine the spell. Many combinations don't do anything. Some only work if you have a flash in your hand. Try out the short ones first. As you pick things up, you will get some hints, but for most hints you need the manual, which gives the conversion between spelled out symbols and their funny shape. Still, you can get by with just doing experiments.

As much as possible I leave "snap" enabled in the resource editor.
Turning it off still produces character co-ordinates but also allows a
pixel offset from the character offset. There is no way for my
resource editor to just use pixels.

>The only solution is to use characters and pixels as normal, but with
>code to fix up the pixels for the current character size when the

In fact my Pug thing does that, hopefully for each resolution it comes
across. It can even press its own buttons to a certain extent but I
never came up with a satisfactory solution for external objects like
the file selector except for "forget it - let the specific application
deal with it - as it knows best".

It'd be nice if we could get an unmoderated group, and get people with
unlimited 'net access, to trawl through the FTP sites, like Hensa,
and Umich, and CNAM and search out the best of Atari Software ! I
reckon that there would be a fair number of binaries going through....

3599. Broken Mega STe

Newsgroup: comp.sys.atari.st
Date: 1996-02-20 00:00:00 UTC
From: tderrick@acpu.com
Message-ID: <9602231901282784 2@acpu.com>
Source record: 150014

HQBA73D@prodigy.com (Jason Hansen) spake thusly:

JH> Allright guys, my Mega STe is broken and I can't figure out
JH> exactly what's wrong with it. The power light turns on and
JH> everything.....It has something to do with the disk drive,
JH> which I just barely bought a new one, and the haard drive
JH> doesn't work. I just gives me the "Drive A: is not
JH> responding." [cancel] [retry] It's really annoying. I have
JH> the Ajax chip and Tos 2.06 and the new drive is a HD. I was
JH> also wondering which order the power supply cords are supposed
JH> to go into the connector, because me being the dumbshit that I
JH> am took them out for some odd reason and I don't know which
JH> order they go back in.

Uh, oh. I have an article lying around here about installing High D Drives that says the data ribbon cable goes in upside down to the way it does in the original (Epson smd-380) drive. And the guy who wrote the article says that doing it wrong corrupted his hard drive, too. Stop what you are doing right now. Find a copy of Atari Interface July 1992; article by Gary Lentz of SWAG (user group, I suppose). If you cannot find a copy, all I can suggest is that you find an expert who can help you.

From: mnb20@cam.ac.uk
Message-ID: <4gc7b3$m98@lyra.csx.cam.ac.uk>
Source record: 150104

In article <Pine.ULT.3.91.960219160651.26088B-100000@mhc.mtholyoke.edu>,
Katherine L Ellis <kellis@mtholyoke.edu> writes:

> What is tex ?

TeX is a typesetting system. It's not as easy to use as a modern
wordprocessor (you control it by putting commands into the document)
but the results are the best you will get anywhere, particularly for
maths formulae.

> What is poscript ?

Postscript is a language that is used by many laser printers to tell
them what to print. It is also used as a picture format. You can
get programs such as ghostscript which allow you to preview postscript
output on the screen or print it to non-postscript printers.

> What is GNU ?

Gnu stands for Gnu is not unix, and is a project by the free software
federation to provide a completely free unix replacement. The kernel
isn't finished yet but many of the tools are, including an excellent
C compiler.

> What is Gem-dos ?

Part of the Atari's operating system, the part that handles files and
processes.

> What is E-mac ?

Emacs is a text editor. It's seriously bloated, but it does have some
very nice features and can be extended easily with its built in lisp
like language.

From: chriswil@southern.co.nz
Message-ID: <4gbvhl$jvd@orm.southern.co.nz>
Source record: 150108

Hi There...

John Norton (jnorton@ra) wrote:
: Chris Wilkinson (chriswil@southern.co.nz) wrote:
: : I run NVDI 3.01 with the demo version of BlowUp030. All is tickety boo
: : (New Zealand slang for OK ;^)) with that setup. Perhaps your NVDI
: Does BlowUp030 have a 640.400. 16 color mode? And, do you run it on a SC1224
: monitor? Do you also run a web browser with it installed? If yes, how
: does that setup work? Does NVDI run it fast enough to be of practical use?

AFAIK, BlowUp030 demo will not work on an SC1224 monitor. It will only use an (S)VGA screen. I am developing an information disk that uses the CAB WWW browser as an offline front end for new users in our Atari club here in Christchurch, New Zealand. It works nicely at the higher resolution and NVDI seems to have -=NO=- trouble keeping the screen updates snappy. One bug perhaps, whenever I boot BlowUp, the 68030 CPU cache is off, even if it is on as a default in the General CPX save option etc...means I have to turn it on with General CPX from XControl...

I have the items mentioned in the subject line and a few disk drives
(one custom 2 drive enclosure, 2 SF314s, 1 SF354- doesn't work)

AND

50+ games - on original disks some with docs
couple of random joysticks
Supra 2400 data/9600 fax modem
I will give this all to you for $150 + shipping anywhere in the US.

So that's 3 computers, 3 monitors, and other random stuff for $350

PLUS I have

PageStream 2.2 and 100+ fonts with original docs and disks - $20
WordPerfect - $10
Le Redacteur with original disks and docs - $35 (an awesome wordprocessor)
Lattice C 3.0.4 - $10
TOS Developers disks (5) - $10
First Graph with docs - $10
Diamond Edge - $10
Xboot $5
Diamond Back II - $10

or just give me an offer

I WANT TO GET RID OF THIS STUFF!!!!!

help me out, I need the money and my TT works for me just fine :)

3608. Re: Q: irpnII demo probs

Newsgroup: comp.sys.atari.st
Date: 1996-02-20 00:00:00 UTC
From: efac001@alpha.qmw.ac.uk
Message-ID: <4gc6ie$5d6@epsilon.qmw.ac.uk>
Source record: 150112

On hsideras@mettav.demon.co.uk, Harry Sideras (hsideras@mettav.demon.co.uk) typed away:
: a> I installed a demo version of irpn II for accelerating the output of
: a> data at the centronics port. Now I realised some strange phenomenons
: a> obviously caused by irpn II.
: I don't know what your problems are caused by or what the solution is, but
: you could always just switch to FPPrint or FREDWEST - they do the same job I
: think.

I would like the original poster to inform us of what the strange
phenomenons are.. I have never come across any.

As for the other printer accelerators, iPRN is different because it
speeds up output by 8 times.. much faster than the other two you have
mentioned.. even Calamus output is speeded up.. yes! iPRN also gives
printer status tracking which means that if for some reason there is
something wrong with the printer and it can not output, you will get
the error message straight away, instead of after 40 seconds that
TOS/MagiC waits.

Alastair Shortland <ashort@mettav.demon.co.uk> wrote:
>
>What about Speed... is Gemview faster at processing GIFS/JPGS than Speed Of
>Light or Picswitch?

I'm a bit hurt that noone has mentioned MGIFv5 yet. ;-)

While MGIF will not use tricks like SPOFLT to get more colours, it will run
in any graphics mode and should be faster than all the others at
loading/displaying GIFs. It also has colour dithering that will give
results comparable to GEMView IMHO, and a very good 'flicker' mode for
monochrome screens.

JPEG loading is not very fast in colour, but for greyscales it's not bad
at all. Targa, PPM and (X)IMG can be read as well and GIF, Targa, PPM and
IMG (any size, with dithering) can be written.

If you want to play around with image processing, there's a lot of that
in MGIF. Most of it pretty fast.

The best part of it all is that MGIFv5 is FreeWare.

MGIF v5.01 will be available in a couple of days, by the way, but the
improvements will most likely only be useful for Falcon owners:

I've finally written some DSP code!
The convolution filters run about ten times faster on a Falcon!
(Around a second for a 3x3 convolution to a 640x480 image)
The median filter runs about five times faster on a Falcon!
(Around four seconds for a 640x480 image IIRC)

3610. Pattern-based music sequencer (for Atari)?

Newsgroup: comp.sys.atari.st
Date: 1996-02-20 00:00:00 UTC
From: jat5@york.ac.uk
Message-ID: <4gc7e6$il0@netty.york.ac.uk>
Source record: 150114
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth,comp.music.midi

I'd like to know if there is a real-time pattern-based sequencer available for the Atari ST.... The sort of thing that I'm after would store a number of different patterns (of different lengths) and would allow the user to select which patterns played at which time. The closest thing to this in `the real world' is something like the old Roland drum machines (the TR606 in particular, coz' that's what I've got) where you can start the thing going, and then select different patterns on the fly. New patterns don't start until the current pattern reaches it's end, thus allowing perfect synchronisation.

Hmmm, I don't know if I've explained that very well :)

I know that there are programs like `Notator Logic' which allow compositions to be built from patterns, but I'd really like to be able to manipulate things in real time....

Thanks!

john..

You can't access most ftp sites with a terminal emulator (unless you also
have a dialup unix shell account of course, which is very unlikely in the
UK) Hensa has modems you can dial up directly.

It's not really one number at all. It's major version 1 and minor version
2. Whether you call that 1.2 or 1.02 or 1.002 is irrelevant, although
more recent Atari documentation uses the two digit style, as in TOS 2.06
so calling it 1.02 seems logical.

> What sysinfo program do you think is "the best"?

Probably Mark Baines' one, profile.

Are you sure it does not auto-park ?

Many modern drives do this, you can hear a load click when Seagate drives
are parked.

The park command on my STFM sends all of the drives to sleep.

Both are correct.

"Officially" you have 1.02.

Most people just call it 1.2.

As to "the best" sysinfo prog, print out a list of what you have or can get,
close your eyes, and point to one.

There seems to be little difference between them nowadays. (The old ones
are crap. The current, new ones are all pretty similar)

3622. LPMUD v3.12 ...

Newsgroup: comp.sys.atari.st
Date: 1996-02-20 00:00:00 UTC
From: c4sy@dmu.ac.uk
Message-ID: <4gcs4h$8c6@macondo.dmu.ac.uk>
Source record: 150126

I recently found (on ftp.uni-paderborn.de) a file called LPMUD312.LZH
(/pub/atari/games)

This is supposed to be an LP MUD game for the Atari running under MiNT ...
but you guessed it- I can't get it to run.

Has anyone else succeeded in getting this to run ??

It's supposed to unpack to Drive E: only and I run the correct binary files
first but it just hangs there ...

Any feedback would be good !

A > before Atari. Never heard of a hobbyist market?

Actually, I have been thinking about Mr. Purdom's post a little bit, and I, too, must disagree with him. As the Atari market seemingly implodes (my term for it), the used hard- and software market will stay pretty hot for quite a while. The diehards like myself will look around for used software and gear that they could never afford before, and the newbies will be trading away STuff that they got with their hardware and gobbling up other things. It doesn't do much for the retailers and developers, but it's great for cheap guys like me.

This may be the perfect time to start a .marketplace. newsgroup, as long as we can get people to post and subscribe to it. Several people have mentioned that they would like to lose the fsale/wtb posts to this one.

From: ai066@FreeNet.Carleton.CA
Message-ID: <Dn31zn.3Au@freenet.carleton.ca>
Source record: 150129

Hi! Whcih IRC server are North American users setting as default for use with STiK, and which default response to identd are you using? (1,2,3?). The servers that I've tried kick me out when they try identd.

I seem to be bale to connect Ok, other than this problem. I have only ever managed to grab one link through CAB, but I'm trying to sort that out too.

What do you mean 'needs to'? I believe the questions about having Magic in
ROM instead of disk is to be able to simply switch on the computer and have
everything there, as well as save RAM space.
So, would it be possible to do this?

It's the same thing. People have always been mixing the x.0x and x.x.
But it should probably be 1.02.

I have version 2.06, but many people call it 2.6.

3629. IDEALIST 3.7 uploaded!

Newsgroup: comp.sys.atari.st
Date: 1996-02-20 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3129ffb4b7f7e08@sn.no>
Source record: 150133

The printer utility 'Idealist' version 3.7 has been uploaded. It's the latest version which I got on a disk directly from the author.
As he doesn't have any possibility to upload it to the Internet himself I've promised him to try and upload it to several sites myself.

Since I don't know who to contact and the individual procedures of uploading programs to the different sites, I thought it would be an idea that if people representing FTP sites were reading this, could get it from my FTP area and put them in their own sites themselves.
(or alternatively mail me and tell me how to upload them, if they're interested in having these programs at their site).

Please notify me when/if this has been done, so I can get back to the author with the information.

FTP to: ftp.sn.no /user/hallvart/atari/

368K ideali37.zip Idealist 3.7- ASCII/1st word/RTF print utility
155K ideatool.zip Idealist tools- utilities/tools for Idealist

Here's part of the 'readme' file that came with it:

What is IdeaList for?

IdeaList is a versatile tool used to print out ASCII files and files in First Word Plus format or RTF. When used it can save up to 80% of paper consumption. Also when you use this program because it has a printer driver exclusive to your own printer you can control all of your printer functions and you can also print the files in better quality. In other words it takes all the hard work out of printing files.

Features

- There are 10 different fonts and sizes and two text attributes selectable.
- Text can be printed in up to 9 columns; IdeaList will automatically sort out the text.
- Lines that are too long will be divided automatically at word boundaries.
- Separate output of front and back pages.
- Optional output sorted in reverse order.
- Editable header and footer (you can edit this so it will show the name the file and its date, or the present date or time, the page number and many other options...).
- All margins are individually adjustable.
- Adjustable tab width.
- Line numbering option (each line can be numbered so you can keep track of split up lines).

- Simple adaptation to any printer via an editable ASCII file (If your printer is one of the printers not included then it is just a matter of modifying the file - and there are not a lot that are not included!).
- IdeaList can use GDOS output, using GDOS fonts or freely scalable vector fonts (Speedo GDOS or NVDI 3), oriented in four directions.
- Download fonts can be used by LaserJet and dot matrix compatibles (more details about this below).
- Converting EMail text attributes (*bold*, _underlined_ /italic/...) into 'real' attributes.
- Separate management of continuous and cut sheet paper (both types of paper are catered for).
- Chain mode (saves paper by not feeding to the end of the page at the end of every file printed; specially useful printing a number of small files).
- Body copy mode to use as much of the width of the paper as possible.
- Skip page mode (using this you can decide at the start of the page if you want to print it or not).
- Selection of the pages and number of copies to be printed; printing can be stopped at any stage.
- "Raw modes" to print Bold and Underline with printers that cannot do this by themselves.

I had instant succes with stik, I managed to get into my own providors ftp site and get the directory, test uploaded and dowloaded files no problem,
My providor then gave me a login and password so i can get to my own web page to change and update it, but the stik,ftp software kept returning "error while PWD XPWD being processed," but typing ftp got me in the public area?

I know the password is correct, a case sensative problem maybe?, so i got
my providor to change my password and loggin to all uppercase, but that dident solve the problem either, now I get either closed too busy? or doesent understand type?

Has anyone succesfully got into ANY site, if so then please post how :)
Lets have some traffic on this subject, or am i missing something, is there another way to ftp upload on my 2meg ste, I do have access to slip or ppp,

Cheers.....!ynoT

From: azog@gti.net
Message-ID: <4gdefp$a5l@gti.gti.net>
Source record: 150142

Ok, with my federal income tax refund coming shortly, I find I have a surplus of available funds :-) And rather than being mature and saving it, I figured I'll buy a new toy or two.

So one of the things I am looking at is the FX accelerator board; I think I saw it was list about $250 at Toad? I was curious about how it is - I don't really care about long rows and columns of numbers (with FX, without FX - you know what I mean). I am interested in "real world" information, and mainly how easy it is to install? I don't have a problem with a soldering iron, but I am wondering if there are any gotchas I should look out for (like system board rev).

Uh, oh. I have an article lying around here about installing High D Drives that says the data ribbon cable goes in upside down to the way it does in the original (Epson smd-380) drive. And the guy who wrote the article says that doing it wrong corrupted his hard drive, too. Stop what you are doing right now. Find a copy of Atari Interface July 1992; article by Gary Lentz of SWAG (user group, I suppose). If you cannot find a copy, all I can suggest is that you find an expert who can help you.

Any idea what the update fee is to go from v1.09? I'd like to have the
color version since I'm using a Falcon with an Epson Stylus Color II
printer.

Also, having never used the SL version, I'd like to know more about the
base package _AND_ modules. What modules will I want that won't be part
of the update package and how will that affect my "update costs"?

3643. Panther Graphics Card?

Newsgroup: comp.sys.atari.st
Date: 1996-02-20 00:00:00 UTC
From: jyoung57@delphi.com
Message-ID: <J3JrK5V.jyoung57@delphi.com>
Source record: 150147

Is the Panther card available yet?

Will it work with:

Pak 030
Multiboard

How much slower will a 16mz system run using this card?

Thanks,
Jeff

3644. Re: Do I have TOS 1.02 or 1.2? (Great, yeah..;)

================================================================================
TOWNS' LITTLE GUIDE TO REVISIONS - VERSION 1.0
----------------------------------------------
Written by John Townsend, Atari Corporation
================================================================================
This is a small document that explains in very terse terms the
differences between the TOS revisions available for ST/MEGA/STE/Mega
STE/TT machines, what patches are needed for what revisions, the formats
they are available in, and any notes I can think of.
I hope this will clear up some of the confusion with the different TOS
versions. If you have any questions on this document, please let me
know here on GEnie. My GEnie Address is: TOWNS.
Special thanks to Leonard Tramiel, Allan Pratt, and Doug Wheeler for
their involement with this little Document. Thanks again!
Comments are welcome..

-- John Townsend
Atari Corp.

ROM TOS (TOS 1.0)
-------
The original ROM TOS, this version shipped in 520ST and 1040ST machines.
It is no longer shipping in any machines.

Formats: 2 chip ROMs, 6 chip ROMs
Machines: 520ST, 1040ST
Utilities: FOLDRXXX.PRG

FOLDRXXX.PRG will add more entries into your OS Pool. In TOS 1.0 and
TOS 1.02, the limit for the number of directories that you can enter is
around 40. With this program you can extend that limit much higher. If
you are using a hard drive, this program is recommended highly. It will
work with all TOS versions and will improve the performance of your
system.
```

Notes: GET TOS 1.04 TODAY! TOS 1.04 is the latest version of TOS for
520/1040/MEGA owners. It is MUCH faster, has faster, better
disk I/O, many other improvements.

MEGA TOS (TOS 1.02)

This is commonly referred to as MEGA TOS. This version of TOS fixes some
minor problems in TOS 1.0 and has support for the BLiTTER chip and Real-
Time Clock chip.

Formats: 2 chip ROMs, 6 chip ROMs
Machines: 520ST, 1040ST, Mega 2, Mega 4
Utilities: FOLDRXXX.PRG

FOLDRXXX.PRG is explained above.

Notes: See notes for TOS 1.0.. GET TOS 1.04 TODAY!

Rainbow TOS (TOS 1.04)

TOS 1.04 or Rainbow TOS, as it is commonly known is the latest version
of TOS available for 520/1040/MEGA owners. It has been available as a
dealer upgrade for awhile now. It has much more robust Disk I/O,
Autorunning of GEM programs at boot up, a fix for the 40 folder limit,
and much more. Most of all is it much faster than previous versions of
the Operating System.

Formats: 2 chip ROMs, 6 chip ROMs (available as Upgrade!)
Machines: Stacy
Utilities: TOS14FIX.PRG, POOLFIX3.PRG, CACHEXXX.PRG, FOLDRXXX.PRG

TOS14FIX.PRG solves some small problems in the AES (for additional
information, please see the documentation that accompanies the
TOS14FIX.PRG program).

POOLFIX3.PRG fixes a bug in GEMDOS. Documentation that accompanies the
POOLFIX3.PRG program explains (in detail) the problem that it fixes.

CACHEXXX.PRG is a new program that adds GEMDOS buffers to your system.
The caching of data and disk directories by GEMDOS (when this program is
used) will result in your system running much faster! This program is
highly recommended and requires TOS 1.04 or higher for full benefits!

FOLDRXXX.PRG is explained above.

Notes: Please use the utilities available and if you haven't upgraded
to this version of TOS yet.. please consider doing so. It's a
very worthwhile upgrade.

There are some disk-based versions of _early_ developer only
releases of TOS 1.04 floating around n BBS systems here in the
United States and abroad. Please don't use them! They are bad
news! They have some very nasty bugs and have been known to
corrupt data!

STE TOS, Rev 1 (TOS 1.06)

TOS 1.06 is the TOS version that is shipped with the 1040STE and 520STE machines. It is essentially TOS 1.04 with support for the new hardware that the STE has.

Formats: 2 chip ROMs
Machines: 520STE, 1040STE
Utilities: STE_FIX.PRG, POOLFIX3.PRG, CACHEXXX.PRG, FOLDRXXX.PRG

STE_FIX fixes the infamous Desktop Medium/Low resolution bug. The problem is that there is a bug in the desktop code in this version of TOS that prevents the user from booting into Medium Resolution. The patch program STE_FIX will solve the problem. Once it is executed in the AUTO folder, the problem no longer exists.

FOLDRXXX.PRG, CACHEXXX.PRG, and POOLFIX3.PRG are explained above.

Notes: This version is only available in 1040STE and 520STE machines. It isn't available for upgrading. It won't work in older machines.

STE TOS, Rev 2 (TOS 1.62)

This is a slightly revised revision of TOS 1.6. It fixes the POOLFIX problem in GEMDOS and the problem in the Desktop that was present in TOS 1.06.

Formats: 2 chip ROMs
Machines: 520STE, 1040STE
Utilities: CACHEXXX.PRG, FOLDRXXX.PRG

CACHEXXX.PRG and FOLDRXXX.PRG are explained above.

Notes: This version is only available in 1040ST and 520STE machines. It isn't available for upgrading.

Mega STE TOS (TOS 2.05)

TOS 2.05 is the version of TOS currently shipping in the Mega STE.
Formats: 2 chip ROMs
Machines: Mega STE
Utilities: CACHEXXX.PRG, FOLDRXXX.PRG
CACHEXXX.PRG and FOLDRXXX.PRG are explained above.
Notes: This version is only available in the Mega STE. It isn't available for upgrading.

TT TOS (TOS 3.01)

TOS 3.01 is the version of TOS that originally shipped in the TT030.
Formats: 4 chip ROMs
Machines: TT030
Utilities: CACHEXXX.PRG, FOLDRXXX.PRG

CACHEXXX.PRG and FOLDRXXX.PRG are explained above.

Notes: This version is only avaible in the TT030. It isn't available
for upgrading.

TT TOS (TOS 3.05)

TOS 3.05 is the latest version of TOS currently shipping in the TT030.
Formats: 4 chip ROMs
Machines: TT030
Utilities: CACHEXXX.PRG, FOLDRXXX.PRG, SERPTCH1.PRG

CACHEXXX.PRG and FOLDRXXX.PRG are explained above.

Notes: This version is only avaible in the TT030. It isn't available
for upgrading.

Mfg,

Wilfred Kilwinger
Support Manager
Atari Benelux,
International Support Center

As you can see, this file was created prior to the release of Falcon030
which came in TOS 4.02 and TOS 4.04 flavors. They still recommend the
FOLDRXXX.PRG...

Also, you can do better than the above recommended serial patches with
HS-Modem.

Good luck!

Don't give up too quickly - these things are usually recoverable.

If you use the ICD PRO s/w you could use its CLEANUP.PRG. Otherwise
Diamond Edge has a good reputation for sorting things out.

After this you are on your own - the best place to look is in the
partition information on physical sector 0. If something here is corrupt it
can stop the OS finding partitions.

3649. Demon NOS cps problems.

Newsgroup: comp.sys.atari.st
Date: 1996-02-20 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <7001dbrewood@nest.demon.co.uk>
Source record: 150153

Can any kind soul help??!?!

As I think everyone is aware I'm using NOS to link to Demon, which usually works very well, but I'm worried concerning my CPS rate.

With the old modem (14k4 Supra)I usually achieved 300-400cps, but now with the Sportster Vi connecting at 28k8 I'm still getting low rates, varying between 300-420cps, with a one off 1200cps.

I had put this down to delays at the Demon server end, but tonightI had a chat with Craig Oldfield who accessed the same Manchester number on his PC. He advises that he averages something like 3200-3800cps all the time!!

Needless to say I'm wondering what I'm doing wrong.

I include my STARTUP.NOS file below to see if anyone can spot any glaring errors!

```
# Sample startup file for KA9Q-NOS ST V0.42

>pixels.

Oops, forgot that one. Actually you can do it as pixels, but then you
get funny results with different sized characters.

The only solution is to use characters and pixels as normal, but with
code to fix up the pixels for the current character size when the
resource is loaded. GEM++ does this for you.

>>There is a res change message, to tell your program to shutdown. What

>appl_trecord() what to do if an error crops up?

Well, you could just remember the window positions etc on a shutdown.

>So what happens if an application does not register?

The user gets the normal message that they can't shut down with
applications active.

Either run something (lots of progs will do it) or hack the files in
a hex editor :) I can't remember what byte it was though, middle of the
second line IIRC.

When you write a program, you set it in the executable options dialogue
box of lattice C.

>monitor? Do you also run a web browser with it installed? If yes, how
>does that setup work? Does NVDI run it fast enough to be of practical use?

Hang on there folks, you lost me.
The falcon has straight VGA output @ 640*480 with either 16 or 256
colours as standard. It only runs 640*400 screens as ST High
compatability mode or so I thought. I'm sure you could get it to
downgrade the display if you really wanted it to!
^^^^^^^^^
NVDI makes the speed loss due to 256 colours bearable.
BlowUP and Screenblaster increase the screen size to something more
workable.
Without NVDI these rez enhancers would slow the machine to a crawl.
Using a multisynch or SVGA or even XVGA far greater screensizes are
available with BU and SBlaster.

CAB looks ace in 800*600*256colours.

Whether it'll run on a sc1224 is another matter entirely.

Buy the best monitor you can. Nothing can do everything.
My multisynch will (with VGA adaptor cable) do 1024*768*16colours
which Ive found is too far (icons are too small for my eyesight)
800*600*256colours which is great for CAB etc. Both these
non-interlaced.

With the Screenblaster detatched and an Atari monitor adapter it will
also do all the ST compatability resolutions as well as the native
falcon modes up to 640*400 Truecolour(but very slowly and in
flickervision) demos seem to preffer these modes ie RGB.

A better monitor will go further than these.

--

--

David Greenhough greeny@spirit.demon.co.uk Kendal Cumbria England
---

If you want bigger than 1024*768 get a 17" or larger.

AS> Gemview?? I have both... so don't want to waste time getting something
AS> which isn't as good! ;-)
Erm, I haven't really tried those progs, all I can say is that you get a much
wider range of import drivers with Gemview, even PhotoCD, but only the
thumbnail sized image, unless I've missed a feature somewhere. It really
needs an update to the manual tho'...so why not get hold of a copy to try

Speak to 'ya later!

3655. Is there newsgroup storage at HENSA

Newsgroup: comp.sys.atari.st
Date: 1996-02-20 00:00:00 UTC
From: ashort@mettav.demon.co.uk
Message-ID: <8673_ashort@mettav.demon.co.uk>
Source record: 150199

This message from Harry Sideras to Alastair Shortland was spewed forth....
AS>> Does HENSA keep archives of news or textfiles/FAQ's in any of its
AS>> directories.. or is it just binaries? :|
HS> Yup. It's got, for example, AEO.

What about non-computer related stuff? Does it have music FAQ's for example?

I could find out by downloading the master-list.... but at that size - NO
WAY! ;-)

HS> What you really need to do is go into directory micros/atari and grab
HS> 00files so that you can search for things offline at your leisure -

I grab the atari/tos/index regularly.... I don't grab the micros/atari one
though because I'm not interested in MiNT. Now I know that there is more to
the ATARI dir's than just TOS and MINT though I will grab it in future! :)

Thanx....

Maarten van den Berg (maberg@xs4all.nl) wrote:

>If you want a real good editor, better try 7up first, it's arguably better.
>It has _all_ things Everest has, and much more too, like:

I agree! the only problem is that the latest version (2.32) is so big- I
wish it would be as compact as older versions of 7up, or like Everest.
I'm actually surprised that nobody else here suggested 7up (except myself
that is).

>-Text-preview

yeah- this is handy (if you don't like wasting paper etc. just to see if
the printout is like what you intended it to be).

>-All 'dialogs' in windows

pretty cool!

>-Unlike Everest, Alt + numkeypad works in dialogs, too.

huh? it works with me, but that's perhaps because I have TOS 2.06.

>-Can do various calculations

yeah- this is a nice 'bonus'

>-Rectangular block-mode possible (if you once needed it, you understand)

Oh yes!!!! This is what I like. VERY effective for copy/paste of vertical
columns or ASCII art. I'm surprised Everest doesn't have this!

There are also a few other things- all in all I find it easier to use than
Everest, but because of CR-LF/LF option in Everest I've been using Everest
lately. 7up has this as well, but not in the smallest version I have
(2.09), but when I need column editing I switch to 7up.

Version 2.2 of 7up is *great*!!!! But the problem is that it's only in
German. I've managed to translate the menues itself into English, but not
the rest (it's not possible without getting access to the source code as
far as I can see).
Version 2.32 has all the bells and whistles as far as I can see, but it's
too big. A great deal of this goes into the TeX docs that come with it, but
it's still a big program.

Anyway, I have all three versions in my FTP area, so if you want to check
them out, go to: ftp.sn.no /user/hallvart/atari/

187K 7up22.zip 7up v2.2 (German/partly English) ASCII text editor
824K 7up232.zip 7up v2.32 ASCII text editor (with TeX docs)
115K 7up209.zip 7up v2.09 ASCII text editor

I also have Everest:

127K evrst35e.zip Everest 3.5 (English) ASCII text editor w/HTML template

Check out my own page- I've got links to several other Atari sites there (which again have even more links I should think) and links to several FTP sites where you can get Atari ST software.

Go to the 'Atari' section (easy to find!) from the URL shown below.

The Swedish Atari User's Association
in cooperation with NoCrew presents

Nordic Atari Show 1996

14 - 15 - 16 of June

We don't give up! Once again we arrange NAS for all Atari lovers. Last year gave us the taste for it, thanks to all the visitors that gave us feedback. This year we're helped by the party elite second to none; NoCrew! The exhibition part is also much better. We look forward to three days full of activity and excitement. Here's a little taster. More information will be out as soon as we know more.

ACTIVITIES

hacker convent competitions for FALCON, STE, ST and Atari 8-bit

exhabition retailers and non-commercial organisations will be there to show you the latest...

demonstrations Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars seminars about programming, Internet, multitasking etc

others competitions for you who are novice at programming (lottery, MidiMaze, mini-harddisk-throwing, CocaCola-drinking etc)

When: 14-15-16 of June *Where:* Lundby Gymnasium in Gï¿½teborg, Sweden

Fees: Payment: SAK member: Non member:_

3-day entrance prepaid 100 SEK 125 SEK
3-day entrance at the door 125 SEK 150 SEK
1-day entrance at the door 50 SEK 75 SEK

We will, of course, be selling T-shirts or pins at the show.

INFORMATION FOR EXHIBITORS

If you want to join the exhibition on NAS you must pay the exhibitors fee of 1000 SEK on our postal giro 491 75 44 - 1 before the 31th of May. The area is 3x3 meters. Non-commercial organisations can join the exhibition for free.

A maximum 2 persons per company and 1 person per non-commercial organisation is included in the fee (which includes entrance to the hacker convent).

Please state your contact person on the postal giro paper.

Since the canteen - that we plan to give the exhibition in - is not the biggest in the world the bootsize will be limited. However the size of your boot will be at least 9sqm. If you wishes to have a bigger boot you should contact us to get specialprizes. Bigger boot will be given as far as the limited space allows it.

"The boot" will be a couple of dining tables plus a suitable amount of chairs that you can have at your disposal. A good thing is to bring white bedsheets or tablecloth of paper to cover the tables.
It's quit gran. A big sign with the companys logo on is recomended too.

We like to remind you that we can't help you in the same way as a real exhibitionservice at a normal exhibition even though we ofcourse will do our very best to support the exhibitors in every way.

The exhibition will have these opening-hours:

friday 14 juni 12.00 - 21.00
saturday 15 juni 09.00 - 21.00
sunday 16 juni 09.00 - 16.00

Ye old tax refund has finally arrived, and it is upgrade time!

I am looking to purchase a Mega STe, preferably in the price range of $300-$350.

The system should have at a minimum, TOS 2.06 and a high density drive, and the host adapter for the internal hard drive.

If the system is already equipped with the full 4 megs of memory and the Ajax chip (I have one already, so it is not critical), it would be a plus. If a hard drive was already installed, that would also be a plus, although how large depends on whether it were bigger and as fast as my current Quantum LPS52S.

I am not saying I will not go higher, but the system would definitely have to offer something special to convince me. $350 seems reasonable, as I have seen at least systems that met my full specs priced at or below this in the past few weeks (unfortunately, before I recieved my tax refund).

Purchase will be via COD, and if needed, I will prepay the shipping and COD charges, unless you happen to live within reasonable driving distance.

Reply via e-mail if you have a Mega STe and are ready to sell.

You shouldn't need to park any modern drive (or almost everything made in the last 5-7 years). Drives are much more robust nowadays - so you shouldn't have any problems. I've carted 5 and 6 year SCSI drives around (by car) without parking - and never broken one.

> an ICD FA*ST box. I tried using the park program (.TOS) that is part

This is designed for really old (10Mb,20Mb etc) drives from the mid 1980s.

:-)

I'm not about to start a flame war (;-) but the TT is certainly not *less*
powerful than a Falcon. Its a different sort of power and has certain other
benefits - but the TT is in its own right an excellent Atari machine.

:-)

DK> something fairly zippy (<12 ms) and big (>1Gb), but this still
DK> leaves a big marketplace.
DK> Do I need a SCSI-II drive per say, or will any SCSI device cut
DK> the mustard.

Hi David,
Older SCSI-Hd's may be too slow both on the seek rate and the transfer rate, so I guess SCSI-II is a better choise.
Also make sure that the drive doesn't calibrate - you can't use such a drive at all with Cubase Audio!
Keep away from the new Quantum drives. They need bus-arbitration and can't be booted from even if your hard-disk driver supports arbitration. I've even tested one of the new Quantum drives and it hung the SCSI-bus completely, even though I have SCSI-tools/HuSHI, which supports arbitration...

Good luck!

Claes

NJ> Can anyone tell me where to get a Tower case for my Falcon?

I guess System Solutions have tower cases.

NJ> Can I use a normal PC Tower Case and adapt it for the
NJ> Falcon?? Any comments will be gratefully received.

If you want to DIY a tower, you'll need a full tower or the Falcon's PCB won't fit. You'll need to cut some holes in the back for all the connectors and make some cables to adapt it all. I'd rather buy a complete tower (like I did :)) - it's a lot of work otherwise.
Best regards,

Claes

Z> I may be a new Falcon owner so I would like to know something
Z> about its specifications and other stuff like:
Z> - I've heard a lot about audio recording using Falcon (on a
Z> hard disk), but where do you plug in and out all the audio
Z> channels ?

There are connectors for audio in and out, but they're not good enough for professional use, so if you want to make records with it you better get a DAT and an S/Pdif interface. Then you connect the source thru the DAT, then send it digitally (either optical or coaxial) to the S/Pdif, which is connected to the DSP-port in the Falcon. Then you have perfect recordings. To get really professional on the output you should get a JAM-8, which gives you 8 separate audio outputs, so you can mix the tracks separately in a mixer. The JAM-8 has balanced +4dB outputs, so it connects to any professional or semi-professional mixer.

Z> - Can I attach a standard PC monitor on ?

Most of the Falcon users have an SVGA-monitor. You'll need a VGA adapter to connect it to the Falcon, but the adapter is rather cheap.

Z> - TOS version

4.04

Z> - I guess it comes with HD floppy (Y/N) ?

It has an 1.44MB floppy and reads/writes PC-compatible files.

Z> - CPU speed (your opinion) ?

16MHz. It's ok, but naturally it's better to get an accellerator, like the FX card, SpeedResolution, Hawk, Barracuda, Afterburner...

More questions?
Don't hesitate to ask me.

From: aj599@FreeNet.Carleton.CA
Message-ID: <Dn3wHu.6Mp@freenet.carleton.ca>
Source record: 150021

The Falcon has only a 16MHz clock, while the TT030 has a 32 MHZ clock. My TT

has an accelerator that runs at 48MHz. Why the Falcon came out with
such a slow clock (only an improvement of 2 in 10 years) is yet another
unanswered Atari question.

The TT030 is still consideded the most powerful of the Atari family. The
main problem is that most are 5 years old whereas Falcons are much newer.

>

Does anyone have experiences in connecting an ST to a PC via the parallel port ?
I used Interlink/interserver from MSDOS 6.22 to transfer data between an IBM-XT compatible Olivetti Quaderno subnotebook and other PCs with the serial port (my Quaderno was only supplied with _this_ cable) and saw just a few days ago that the parallel port connection is so much faster.
When transferring data between my ST and the Quaderno I used GHOSTLINK which works fine, but only with 19200 baud on the serial port. Now I really liked to speed that up.

Did anyone already do that ? Is there a programm like GHOSTLINK or Interlink/Interserver which works with the STs and an IBM parallel port?

Thanks, DIC

>is "the best"?
...

They are both one and the same. For some reason its to do with the way the program reads the info from the ROM chips. The info is stored 1.20 but the minor part should be reversed to 1.02.

Therefore 1.00 is 1.00 ;-)
1.2 is 1.02
1.4 is 1.04
1.6 is 1.06 (STe Only)
And so on...

Andy.

3677. GCC can't find include files?

Newsgroup: comp.sys.atari.st
Date: 1996-02-21 00:00:00 UTC
From: sanders@sci.kun.nl
Message-ID: <4gf9d3$c4h@studs.sci.kun.nl>
Source record: 150032

Hi,

I finally got round to installing GCC 2.6.3 on my Falcon. Having read the
docs by Frank Ridderbusch and having set it up accordingly, GCC still
can't find the include files. My simple hello.c gives an error:
`can't find stdio.h' or something to that extent. I have set GNUINC,
tried GCCINC and even
% gcc -I- -I/usr/include hello.c
all to no avail. Ere the paths hardwired or something? Or am I doing
something very wrong? (Probably... :-( )
Putting #include "/usr/include/stdio.h" revealed one of the possible
causes: GCC said it couldn't find /usr\include\stdio.h (not the
slashes!). I've got UNIXMODE /brUs, as with the reccommended d/brG
init couldn't find my wtmp file and hung.

Thanks in advance for any help,
regards,

I have for sale an Atari 512K STFM computer complete with an Atari mono monitor. It is very reliable & in good condition. Included would be lots of Software mainly games & utils. 150 pounds & it is all yours.

I also have a Spectre GCR Atari/Macintosh emulator for sale. It plugs into the ST and emulates the Mac perfectly. The best Mac emulator for the Atari ever. However, as it is no longer produced I only want 125 pounds.

Lots of Atari mags, Atari ST User & ST Format going back to about 1989 with no issues missing and all with cover discs. I would rather sell each type as a lot rather than split them so only 20 pounds for each bundle.

Finally I have an Apple Macintosh Stylewriter II printer for sale. Works perfectly but only used to test print. Cost 180 pounds. I want 135 pounds for it.

E-Mail me or if you are in the UK my telephone no. is (01323) 893294 after 6:00pm.

Geoff Hockney

A couple days ago, the author of the ftp client (I don't have his name or
Email at hand :-( ) wrote in the german atari newsgroup, that the program
has problems with passwords or anonymous ftp that actually checks the given
Email address. So this might be your problem.
He is working on it, but why don't you contact him directly, he is interested
in all detailed bug reports.

Hope this helps

Source record: 150037

In article <4gefcf$ce4@orm.southern.co.nz>
chriswil@southern.co.nz (Chris Wilkinson) said:-

>Correct me if I am wrong, but isn't STiK unable to use a port speed
>higher than 19200? I try for 57600 on my 14k4 on my Falcon, but STiK
>always says 'Incorrect speed - defaulting to 19200 baud..." or words to
>that effect. I dont run HSModem (my modem barfs), only FPATCH2.PRG and

Stik or more precisly the device.lib used by stik does not work
properly without hsmodem without hsmodem 19200 is the highest speed
availble which works properly. Hsmodem should not do anything to your
modem I find it gives me faster and more reliable connections. Which
version of hsmodem were you running? and were your running the correct
parts of the package in the correct order? eg on a Falcon drivin.prg
then scc.prg (in that order in the auto folder)

>have no trouble with the modem except that STiK doesn't work for me
>almost at all. A Falcon without HSModem can do 12-15000 cps via null modem
>at DTE speed 115200 (possibly higher but friends TT wouldn't support
>153600) so why wont STiK allow higher on a machine that DOESN'T need any
>serial enhancement...

I just tried 115200 between 2 Falcons with a null modem cable without
hsmodem and with it the higest reliable connection I got with connect
between the 2 was 19200 at every other speed it was timeing out and
getting errors. with hsmodem it went up to 115200 no problem I didn't
even try higher speeds.
The Falcons serial port code is as buggy as the st's basically, and
yes I did have fpatch2.prg in on both attempts.

Hello,

I've decided to sell my STacy 4 because I just don't use it enough.

Atari Portable STacy 4
4 MEG RAM
52 MEG SCSI internal hard drive
720 3 1/2" floppy
External Power Supply
Corduroy/nylon carrying case with handle and shoulder strap
Has standard ST ports. MIDI, Parallel, Serial, Mouse, Joystick, DMA, Monitor
Has built in track ball, but if you wish you can use a mouse
Has built in backlit LCD 640x400 mono screen.
You can hook up either an external color or mono monitor.

Unit is in great condition and works fine. Asking $750 or best offer.

E-mail me or call 216-729-0761 evenings 6:00 - 10:00 PM EST

> next please :),

Oasis includes nos so you dont need the nos file the oasis file should
be a self extracting archive just double click and it should unarchive
if it doesn't try loading it into stzip if it still doesn't work then
I suspect you have a totally broken archive and downloading it from a
bbs or something might be a good bet. Check adlib for oasis 1.35 if
its not there mail me and I will upload it for you.

Flinny.

Source record: 150042

I'd agree with Roland on this one. As a Falcon owner, I feel that,
out of the box, the TT is the more powerful computer. It has
got a 32 MHz 68030 as opposed to the Falcon's 16 MHz 68030. It
also has many more ports and is more expandable RAM-wise.
On the other hand, the Falcon has better graphics, a DSP, and better
sound. For number crunching, get the TT. For more of a "home"
computer (graphics, games, sound) get the Falcon. Of course,
the Falcon can also be upgraded with many accelerator boards
and the TT can be equipped with video cards.
Another thing to consider is that it will probably be easier to
get a Falcon cheaper than the TT from what I've seen in for sale
posts.
These are all obviously IMHO and I am obviously not very knowledgable
about the technical aspects of each machine.
Oh, check out Computer Direct's homepage for info on their TT clones.
I don't know the address but do a search or go through links.
Hope this helps.

They're both the same. I believe 1.02 is more technically correct.
My TOS is 1.062, but it is widely referred to as TOS 1.62.

You have to careful with some of the Sportser models! Some of
them only have error correction and compression if you are running
Windows! It isn't built into the hardware! Kind of like a lot of the
newer printers! Cheaper to make the hardware dumb, and let the computer
do the real work! Only thing is, THEY ONLY SUPPORT MAC AND IBM TYPES! Be
warned and check closely before you buy! One of our memebers just got bit
by a new Zoom FaxModem! Same problem if, if you don't run Windows 95 your
out of luck!

>point (resource creation? loading?) that this occurs :-(

You design your resource with character snap off, so it stores in the
resource file as characters and pixel offsets. When you load the
resource you call a custom load routine, passing the size of the font
used to design the resource. If it differs from the current one (such
as when displaying in medium res) all the pixel offsets are scaled.

The only things that don't come out right that way are icons.

>alternative?

Just different. SMTP is used to store mail on your computer, you have your
own mail domain and all mail addressed to that domain is sent there. SMTP
is the protocol used for all mail delivery on the internet.

If you get mail delivered to another site, perhaps a copmany mail server, or
maybe one run by your ISP, then it is delivered to that mail server, and you
collect mail addressed to your account there by either POP3 or IMAP.

If your mail address is yourname@isp.com then you (probably) have to use POP,
if it's any-name-you-like@yourhost.isp.com then you (probably) have to
use SMTP.

3698. AT-Speed Emulator & Serial Port

Newsgroup: comp.sys.atari.st

Has anyone succeeded in using a modem from within the AT-Speed emulator
(or its cousins, PC-Speed or Falcon-Speed)? There's no mention of this
in the manual (which is somewhat sketchy about other things it does,
too).

I have just received (at long last) Magic4 and Ease4! Hurrah!

I've installed it all on my Falcon and have the following problem:

Ease doesn't seem to recognise my machine's a Falcon.

It will not allow me to change screen resolution (I can select ST low etc.
click on ok and nothing happens).

I'm running NVDI3.02 and PowerUp2 if that's any help.

Any help on this would be much appreciated!

Sorry about this, but Fred Bloggs doesn't really exist. Oops.
It was actually me who posted this (using the wrong user under Oasis2,
sorry)!

I've managed to get Ease into 16 colour mode by running it from MagxDesk
then configuring it.

It still does nothing if I try and change resolution when running directly
from Magic4 (as the shell) though!

Is Ease4 not really designed for Falcons?

But all ESCOM have done is use the Commodore name to badge a new PC and peripheral line ... so its a kind of "licensing deal" I guess . This would be the best chance for any survival of "atari" hardware ... sell the name and TOS to someone who may be interested in using it (anyone??)

Message-ID: <825002092_OASIS_@ajrose.demon.co.uk>
Source record: 150067

Cautionary OASIS tale - users PLEASE READ!!!

After a frustrating night last night where my ISP was refusing to
accept usenet uploads, I made one last attempt before going to bed.

Having failed again I turned everything off after logging off - but
without waiting fully for the log-off process and for the desktop to
reappear. When I switched on this morning I found my OASIS folder
completely empty. I attempted a bit of disk repair, but this only
served to eradicate my Oasis folder as well :-(

Hence a frustrating re-assembly of user details etc., plus I've lost
all my e-mails, e-mail addresses, old news, etc - the lot!

So: beware, and don't make the same mistake as I did

You have been warned.

Andrew

>Anybody point me somewhere or wanna swap software?

Fonty - written by Mathew Carey, and distributed by the FaST Club in the
UK, would appear to be your best choice at a low price.

It allows you to create and manipulate CFN fonts. A small program supplied
with the main package called PFB2CFN reads PS Type 1 fonts and copies it
into a CFN file.

You can also load a Degas PI3 mono file or a GEM font as a background image
to trace around.

The author has quite recently released a program that lists all types of
fonts and outputs them to screen or printer or file. I would imagine that
he is probably still supporting Fonty.

Hope this has been of help.

^^^^^^^^^^^^^^^^

I agree with most of this, but the brand name and logo? Atari's decade-plus of mismanagement has trashed the name and logo in the eyes of all but a few devout fans. While the brand name and logo will go along with any assets the company has, I can't see placing ANY intrinsic value on the brand name and logo alone. They are fine when they must come packaged with "Missle Command" or the arcade classics, but who would want to market anything else under the Atari brand name and logo? If you developed an excellent product for retail sale and marketed it under the Atari name and logo, customers would instantly assume that it is a risky buy and be leary of being left hanging high and dry. Once again, if it's arcade classics you're selling, the Atari name and logo would be fine, but make sure "Asteroids" or "Tempest" or some other well-known hit name preceeds it!!

I'm sure the patents must be worth something if you have an avid legal department on retainer without much to do, but are they not soon to expire? The Tramiels know what patents they have which could be used as cash cows and if they are now selling them, it's because they likely don't see dollar signs in them any further.

Personally, I'd like to see (gasp) Microsoft buy Atari. They did a wonderful job with the "Microsoft Arcade" of Atari classic arcade games. I'd like to see more of those done like the Microsoft Arcade: pixel-perfect, sound-perfect versions of my favorite Atari games. I'm not so concerned with the brand name and logo on the outside of my PC box as I was having TONS of fun with the Microsoft Arcade, and I'd be pleased if they did more stuff with my favorite Atari games. Like 'em or not (Microsoft), they've got the cash and the drive to develop classic Atari games on a modern platform, and do an excellent job of it.
MORE GAMES!! MORE GAMES!! heh.

James

3717. Sometimes it's there.....

Newsgroup: comp.sys.atari.st
Date: 1996-02-21 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <824977948_OASIS_@husbands.demon.co.uk>
Source record: 150072

Greetings from myself!

I seem to have developed a small problem with my hard drive. Here's what happens. From running normally, if I have to reset the machine for any reason by pressing the switch on the back of the ST, when my desktop appears again, all my drives are in place and evrything looks normal. However, when I click on any of the drives, it opens to display NOTHING! O bytes use in O items! This is true except for Drive C which is my boot drive. However, if I power evrything down and restart it up again, it works OK generally (but only about 80 percent of the time).

I use Superboot V.7 to control all my accessories etc.

Can anyone help? I live in fear that one day I may not be able to get anything back! I have backups but would rather not get into that if there is an easier fix.

Thanks!

>init couldn't find my wtmp file and hung.

I have some more info now:
% gcc -I- -I\\usr\\include hello.c
worked. Now what about that; GCC (of all programs!) wants \ instead
of /! Argh! Setting GNUINC to \usr\include didn't help, BTW.
How can I fix this? I want it to be \-free, if possible.

Another thing which I stumbled across seems like a genuine bug to me.
GCC complained about some #defines that didn't match previous
definitions, in compiler.h (mntinc46). At the given line number, though,
there were _no_ #defines. After a lot of fiddling, I found out that
somehow the preprocessor seems to get seriously confused by comment lines
spanning several source code lines, as in
/*
* The comment starts here
* and ends here */

The source file lines aren't counted correctly then. And another
thing that I found out: The offending #defines were _after_ an #ifdef
__TURBOC__, which is none of GNU's business! What was it doing there?

Did anybody get GCC 2.6.3 to work correctly? What newbie errors am I
making?

Please help,

I wish to use CAB with my internet provider . But he gives only PPP type
connection .
I found info about CAB with MINT-NET .
I try to get this software trough some ftp sites , but I'm not able to
decompress files like xxxxxx.tar.gz or xxxxx.tgz and so on .
Can someone help me in some way ?
If it is possible sending the answers both on the newsgroup and also to my
Email address (fov1186@iperbole.bologna.it)

Thank a lot and ciao .

Actually, the company to watch for that is Intel. We've all seen how they started with the microprocessors (which they invented, of course), and when the "PC" architecture came out, they slowly increased their dominance in it. Intel got into PC chipsets, then the PCI bus (which is of course Intel), then entire Intel motherboards (I think Gateway 2000 uses Intel motherboards, though it was just a rumor), and Intel even makes some complete PCs, but they sell them to OEM companies. As much as Intel would like to sell their own PCs, they'd undersell all the PC makers in the world and get some mighty BIG flak. I wouldn't be surprised if they do it eventually, when they feel the profits will outweigh the negative PR.

Give Coma a go. I think the current version is 3.20. It should do all
this but I'm not sure about Vi compatability. It's shareware and
stupidly expensive IMHO but looks very good.

Oof... You better cancel this post, dear Rich, before anybody from alt.religion.emacs gets word of it. I'm certainly not an emacs advocate but let me rephrase your paragraph...

That would be "emacs," a text-based fully programmable, fully configurable, system-independent, LISP-interpreting, fully remappable, originally-designed-in-the-past-for-editing-but-now-capable-of-just-about-anything, versatile, news-reading, WWW-pages-understanding program, available for all computers worth that name. It is about as useful for the average Atari user as a Cray Y-MP is to the average undergraduate maths student (or: as a Stradivarius to the average Wild West fiddler)... etc.

Having said that, of course, REAL men use vi.

Oh and PS, this is of course all :-).

Regards,

If you use NVDI 3.0 or even NVDI 4.0 then printing is very quick, even if
everything is converted to graphics (about 10 s. for a page in 600 dpi is
realistic).

If it's a SCSI drive, odds are that it auto-parks. MFM and RLL drives
usually need a park command, but trying to park a SCSI drive may even
damage it. That's uncommon but not unknown.

Tex and postscript are both languages designed to make printers produce their best possible output. Postscript relies on the printer having the right language embedded in it, thus Postscript printers cost more (although you can get Ghostscript software that will drive an ordinary printer).

> What is GNU ?

GNU is a generic term referring to software from the Free Software Foundation (I don't know why), and is usally using in connection with a particular package, such as GNU C.

> What is Gem-dos ?

That's the basic Disk Operating System (DOS) in your Atari computer.

> What is E-mac ?

That would be "emacs," a text-based line-oriented and fairly primitive editing program available for practically all computers. It is about as useful to an Atari user as a stone axe is to the average businessman. This is not to say you can't use it, just that there are many other, more modern and more powerful tools available that can do the same job.

Unless you're really cramped for space, I'd advise you to get the 486 box also. That way, when it crashes, it won't take your Atari down with it.

>Thanks,

There is no jumper on the CP30540 to disable parity (I just looked at
http://www,conner.com to get the drive's specifications). Software
disabling of parity would probably be the only possibility. I believe
The Link II will work with parity enabled, however. You might want to
call Conner at 1800-4-conner and ask them if they offer an eprom
exchange or if they will disable parity for you.

3733. CAB and CAB.OVL problems

Newsgroup: comp.sys.atari.st
Date: 1996-02-22 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <4gh8qg$9vm@news1.wolfe.net>
Source record: 149961

Here's the setup:

Hardware: Mega STe 4 using Serial 2 and a Hayes Accura 28800 modem, "Y"-cable to feed contol signals (CD, RTS/CTS) from Modem 1, SC1224 (my SM 124 just died).

Software: HSmodem 6 (in Modem 1 Emu mode) locked at 57600, STiK (with 200000 bytes allocated), CAB.OVL, and CAB - the version 1.16 package.

I have identified a "Kmalloc() error" in STiK that was apparently unrelated to the other post today; the memory table was getting corrupted, although I didn't figure out what did it.

Any ideas?

3734. FS: Atari Falcon 030

Newsgroup: comp.sys.atari.st

From: Darryl Godsmark <darryl@dcs.shef.ac.uk>
Message-ID: <4ghegt$25e@bignews.shef.ac.uk>
Source record: 149962

Hi all!

Well, like my subject line says I have an Atari Falcon.
But I don't need it anymore. So, its for sale!

The entire package includes:

Hardware:

* An atari falcon 030!
* Internal 128MB Harddrive
* Originally 4MB, now upgraded to 14/16MB memory
* 68882 fitted
* brand new internal floppy drive

* Replacement mouse

* A 15' svga multisync monitor (does 800*600 nicely)
* Screenblaster II
* 400dpi mono hand scanner

Software includes:

* Devpac 3.0
* True pain (erm, sorry, true paint...)
* Calligrapher gold
* Papyrus gold
* NVDI 3 + lots of true type fonts
* Speedo GDOS
* GFA Basic
* FTL Modula-2
* various scanning packages
* Falcon games: Ishar, Ishar II, transantartica etc.
* plus lots of older ST stuff

Books:

* Official atari falcon developers docs
* Motorola 680x0 programmers handbook
* Motorola DSP programmers handbook
* Stacks of magazines
* Old atari internals (good for old BIOS/XBIOS calls)
* Various bits of online documentation

Still has all necessary leads etc.
Original manuals.

Basically, I am prepared to consider any (sensible!) offer
so if you are interested, drop me a mail at:

d.godsmark@dcs.shef.ac.uk

Buyer must be prepared to pick up goods, and I will happily
demonstrate everything before purchase. That means anyone
wanting to buy it will have to make a trip to sheffield.

Cheers

Paolo,
You need GZIP-TOS to convert tar.gz to tar, and then DETAR (or something
similar) to unarchive TAR files. They should both be available on
archive sites.

Gary Priest (gary@the-gap.demon.co.uk) wrote:
: I've managed to get Ease into 16 colour mode by running it from MagxDesk
: then configuring it.

: It still does nothing if I try and change resolution when running directly
: from Magic4 (as the shell) though!

: Is Ease4 not really designed for Falcons?

Version 4 of Ease is not able to use the features of MagiC 4, i.e.
aliases, long file names, online scrolling (exactly: Ease 3 doesn't work
with this, I do not know how Ease 4 behaves), parallel copy operations,
built in 3D AES objects (Ease has it's own objects), iconification, and
memory saving colour icons (when used with > 16 colours).
Therefore I had to write Magxdesk. Other good choices are Gemini and
Thing, if you have enough memory. Otherwise you definitely should wait
for a new version of Ease.
Besides: You should not use changes.prg as people in this news group
reported problems when used with vt52.prg.

That's not correct. Stefan Scheffler from Steinberg told me that the new version
2.04 (on ftp://ftp.mcc.ac.uk/pub/music/cubase/UPDATES/atari) can now use the
FX-RAM for samples. I haven't tried it myself, but I trust the Steinberg people..

|> SP> 3) Will CAF ever be in color?

3742. Error 403 with CAB?!

Newsgroup: comp.sys.atari.st
Date: 1996-02-22 00:00:00 UTC
From: a2124874@athena.rrz.Uni-Koeln.DE
Message-ID: <4gi38i$ivo@news.rrz.uni-koeln.de>
Source record: 149970

Hello!

Does anyone know, what "Error 403 - Forbidden by rule" means? Whenever I try to download a web-page with StiK/CAB and try to connect with the URL this message is all I get to see!

Help!!!

Andreas

3743. New BBS Software!

Newsgroup: comp.sys.atari.st
Date: 1996-02-22 00:00:00 UTC

Message-ID: <mccallum-2202961018290001@port22.inwave.com>
Source record: 149971

Thought I'd post a little note about the release of Foresight BBS
by Brian Hauer of TSO software. I've been running it for a while
now and its a great ST bbs package for anyone looking for a cheap
but effective way of starting/upgrading a bbs.

The program is Donationware and actively supported by the author,
a wide Beta package is now available - I will attempt to put the
.zip up on ftp as soon as I can a) get connected, b) figure it out.
(look for the file FS_wideB.Zip). Although the package is still
in beta testing, its been running at several sites without problems
for a year and more, that includes the networking modules.

...Worth a download if your in the market for a BBS! :)

If all else fails the zip can be downloaded from the following BBS's.
Mindbomb 608/757-2092 (log in as User:Mindbomb P/W:Support for 1st
time "instant" downloads...)

TSO 310/543-5483 The authors BBS.

...Sorry if this sounds like a blatant plug, but it doesn't seem that
anyone reads or posts in the announce group! :P

3745. Dead Progate 40 Hard Drive

Newsgroup: comp.sys.atari.st
Date: 1996-02-22 00:00:00 UTC
From: Tom Seddon <T.W.Seddon@ncl.ac.uk>
Message-ID: <Pine.SOL.3.91-941213.960222162031.3867A-100000@aidan.ncl.ac.uk>
Source record: 149973

I have a progate 40 hard drive (46MB capacity) for my ageing and decrepit 4MB STe. This drive has always had a bit of a bad sector problem (last count: about 5% of the disk was bad) but recently it has just died completely. I think the bootsector is now corrupt; when booting it makes a grinding noise, as it does when trying to read a corrupt block, and does nothing. I've tried reformatting and everything, but all to no avail.

What I'd like to know is: is there a (cheap!) way of fixing this? Can I plug another SCSI hard drive into the progate? (would be nice... can the ST handle 500MB+ drives?!) Or does anyone have any suggestions?

I don't use the atari much these days, having moved onto a PC, but I still program in 68000 now and again and it's a real pain having to load everything off disk. If anyone has any suggestions they'd be gratefully received. (E-mail preferably)

> I may be a new Falcon owner so I would like to know something about its
> specifications and other stuff like:
> - I've heard a lot about audio recording using Falcon (on a hard disk),
> but where do you plug in and out all the audio channels ?

It comes with stereo audio inputs and outputs. Cubase makes an expander that plugs into the DSP port (Cubase Audio Falcon + hardware) which gives 8 more inputs.

> - Can I attach a standard PC monitor on ?

Yup!

> - resolution and colours in all combinations

About as many resolutions as you can think of in 2, 4, 16, 256, or 35,000+ colors. This is done with software and or hardware. I recommend the BlowUp Hard II hardware/software package. I'm using it now and typing this message to you in 800*608*256 colors. There are also shareware and freeware programs that do this.

> - all interfaces

Appletalk LAN, SCSI2, MIDI, cartridge, Parallel printer (standard centronix), mouse, joystick, 2 extended joystick (jag joypad plugs in these!), RF modulator, & a 9-pin d-sub modem port. Of note is the Processor Direct Expansion Slot!

> - TOS version

4.01-4.04 for Atari models. 3rd party manufacturers also make falcons with other modified tos versions, such as a modified 3.06, which supports fastRAM installations. The C-Lab Falcons, I believe, support this, as do other modified falcons from other manufacturers.

> - I guess it comes with HD floppy (Y/N) ?

1.44Mb floppy built-in. Also 2.5" ide hard drive comes with most falcons, and can be replaced with 3.5" IDE or SCSI drives (with modification).

> - CPU speed (your opinion) ?

Again, the base model runs @ 16MHz, but there are all sorts of 3rd party speed enhancers which can run as fast as 40 or 50 MHz.

> - You name it.

I did! :) I love my bird, and plan to have it remounted into a rack case w.
FastRAM added and a cpu accel. Also plan on adding Expose' digitizer and
486/33 PDES cards to give me 2 computers in one! :) -gkelly@sat.net-

I've heard this warning for years, but I've never once heard a decent
explanation of why it might be damaging to an auto-parking drive to
force it to park manually.

Anybody got a clue about this?

Cliff,
Even if the pop commands are executed too early, would a pop kick
correct this? I still cannot get pop mail to work. I looked at
my friend's setup in Eudora and he simply had to put in his
address for for the pop account. I have my STARTUP.NOS this way:
pop mailbox stirre31
pop hostname maine.maine.edu 3
What else could be messing it up? I'd appreciate any help. Oh,
I do have the Pop mail version. FTP and telnet work fine.
Should I post my STARTUP.NOS?

ISTR that there was a program called MIDIGrid or something similar
around a few years back which did something like the above. I think it
gave you a grid on screen and you could program the squares with
sequences which played when you clicked them. Think I read a review
in one of the ST magazines. Anyone got more info on this one?

I just received my Blowup FX Ram/video expansion/accelerator card, and
have a few questions about it...

1. Is 14meg still the maximum amount of memory that can be used?
(I currently have 14meg with the Wizztronics memory expansion)

2. Is there an advantage of the FX ram expansion over conventional Ram
expansions?

3. Are there any undocumented hints or tips that might assist in getting
the accelerator to run at highest speeds?

Greetings,

I am trying to locate Hans Achim Mueller, the author of the
programs called Voxx and Pterodaktilus for the Atari Falcon. Voxx is a
16-band patchable vocoder, and Pterodaktilus is a software synthesizer.
I would very much like to purchase these programs.

The demo for Voxx included the following information:

Hans Achim Mueller
Nadlerstr. 6
D-69214 Eppelheim
Germany

I sent a letter to that address, and it was returned with the
stamps "Zuruck" and "Unbekannt verzogen". Does anyone have a current
address or e-mail address for Hans Achim Mueller?

Patrick Bass <pbass19@chaos.magibox.net> writes:

>The Subject says it all... Is Jack Tramiel (and Sammy and Lenny)
>behind JTS systems?

The official story is that they are not. I guess ol' Jack wants us to
believe that he's finally wised up and noticed that Sam and Len were
dissolving the family fortune.

On the other hand, it wouldn't surprise me at all that Sam has a stake in
JTS somehow.

Somebody please tell me what JTS gets out of this arrangement? There's got
to be dozens of places to go to get an infusion of cash if JTS is worth
anything at all, why would the owners of JTS want to get involved with
a dirtball like Tramiel?

This may be a long shot, but... The only use I have for my Atari equipment is for MIDI sequencing, and what would really be the best for my uses is to have a STacy. Unfortunately, I don't have large amounts of cash to work with, but I would love to trade all of my current Atari equipment for one.

Here's what I have :

(2) 520ST's with 1mb RAM (each)
(1) SC1224 Color Monitor
(1) SM124 Monochrome monitor
(1) "Monitor Master" switch - hook up Color/Mono ST monitors, or a multisync monitor, RF modulator, or RCA type composite connector
(1) DS/DD external floppy drive

(1) 85mb SCSI drive with AdSCSI + host adaptor, in a case with a 720k floppy drive.

(2) ST mice

Leave E-mail if interested. (jeremy@icw.com)

Thanks.
-jeremy

>Are there any fonteditor/converter for SpeedoGDOS?
>I want to convert Calamus-fonts to Speedo.

AFAIK there is not a CFN to Speedo font editor, probably because Bitstream guard the Speedo format and threaten action against anyone that tries to do anything with it. I do remember that ZZSoft, the people behind Easy Text Professional etc, planned to do such a converter/editor, but it never happened. Best thing we can do is try and get more programs to use True Type fonts alongside Speedo ones, then we have access to cheap fonts. With the release of NVDI 4, and support from various companies/authors we should at last have a decent vector font handling system that works.

Patrick Bass <pbass19@chaos.magibox.net> inquired plaintively:

P > Subject: Is JTS owned by Uncle Jack and Sons The Subject says
P > it all... Is Jack Tramiel (and Sammy and Lenny) behind JTS
P > systems?

According to the press release and news articles, JTS is Jugi Tandon S_____ (systems?). I have seen ads for Tandon drives; same guy, I think. However, there is nothing to say that there isn't some hanky-panky going on regarding the true ownership of JTS.

You can think of the ATC-JTS deal as a way for JTS to go public - an Initial Public Offering. In which case you can look for the publicly traded stock (ATC) to reflect that fact.

In a very real sense, Daddy Jack and sons *are* behind JTS, now. Jack has a seat on their board, and I suppose Time Warner will too, although nobody has said anything about it. I don't even want to think about what their board meetings will be like. Anyway, it hardly matters, unless the license agreements that allow CLab and company to do what they do expire. And MagiC may have that covered. Maybe the Tramiels have become as irrelevant to us as we've suspected all along.

I just had a phone conversation with a fairly well-known Atari programmer who works at Time Warner Interactive - only they still call it Atari Games, at least in-house. That outfit is still apparently alive and well. Look for the coin-op game 'Area 51', coming soon to an arcade near you.

graham@grasper.demon.co.uk (Graham Irvine) typed away:

GI> But all ESCOM have done is use the Commodore name to badge a
GI> new PC and peripheral line ... so its a kind of "licensing
GI> deal" I guess .

According to my sources (a local Commodore dealer), that is not
quite true. Escom *is* using the Commodore logo on their pc line,
but they are also making Amigas - the 1200 and the 4000.

I wish them luck. As somebody's tagline says: 'Death to the tyranny
of MicroSoft!'

dunno about splines, but commercially there are things like CAD 3D V2
(old) and Cyber Sculpt (also old), things like Xenomorph have
modellers.

Shareware, you could try EB_Modeler, although it had problems I recall
with TOS 1.02..... is quite good, and has few export formats !

As english, has strangley become (I think) the 2nd most spoken
language in the world (Chinese=1st), and most of the germans I've met
speak pretty good english, it wouldn't be too difficult to do passable
translations. The second point is that if they speak _already_
resonable english then they have few probs with english progs, whereas
stubborn english bods like me who refuse to learn a foreign language
can have real probs with german progs.

Hello,

here are some known problems with my ftp client:

- some server require an identd server to run on the
requesting host (i.e. your ATARI), this problem
will be fixed in the next version (perhaps this
night, but sure on monday evening available
at ftp.on-luebeck.de)
- for unknown reasons the alternate ram flags have to
be disabled on computers with fast ram or with
MagiC (on FALCON with OUTSIDE the programm runs
without these flags disabled ....)
- sometimes the programm stucks on interrupted
connections, this will be fixed in a newer version

Something about the archive name of the following versions:
The archive will be named like this:
mgftpXYY.lzh where XYY represents the version number X.YY

Bye,
Michael Guse

: (with FX, without FX - you know what I mean). I am interested in "real
: world" information, and mainly how easy it is to install? I don't have
: a problem with a soldering iron, but I am wondering if there are any
: gotchas I should look out for (like system board rev).

FX is very good, once you get it installed, configured and running
reliably. It's compatible to virtually everything, and the speed-up
is more than I expected it to be. Especially in 256-color mode;
Calamus SL and stuff like that really only become usable with FX.

The installation is more nasty than extremely difficult. It takes
time and lots of patience, but it's pretty straight-forward. Not
impossible to anyone who knows how to use soldering iron. Of course,
if one only wants to have e.g. Fast-RAM, then FX is very easy to
install: no soldering at all! I think, however, that the extra
work with Blow-Up, accelerators, and the SCSI-fix, are worth the
effort.

It seems, few people have managed to get the 40 MHz mode to work
correctly. Falcon is a difficult bird with its internal timings!
36/18 MHz mode works fine in my Falcon, as does the 50 MHz DSP.
The only "problem" with DSP-acceleration is that I have to perform
a cold-boot instead of a warm-boot as a reset: otherwise the DSP
doesn't sync correctly. This is a minor problem.

All these modifications together make Falcon a completely different
computer, and a very fine one, I think. It feels like a TT, yet it
offers more possibilities.

Hope this helps a little ..

I put all my POP commands in a separate file which I execute after
the connection is confirmed. NOS doesn't wait for your dial-up script
to finish before executing the rest of STARTUP.NOS. This can cause
the POP commmands to execute too soon; making it impossible to find the
POP server. IF you do a "t s" command and see the POP client sitting
with a status of SYN sent, this is likely what happened.

John,

I think you DID explain what you meant pretty well..... There are a few that I know of that work quite well: Steinberg's Cubase has an 'add on' module called STYLE TRACKS that works very nicely in real time (you don't need the 'Audio' version, the normal one does just fine). It also let's you define new patterns and the channels, voices, velocity, etc that they use. The only other ones I've seen are Dr.T's "M" (very interesting, performs algorithmic "re-composition" on the patterns ala Omega's PVG), and "Realtime" (don't remember much about that one). There's also "Band in a Box". I'm sure that there are more out there, I just can't remember them right now.

I have a Keyboard Gizzmo installed on a Falcon. The <only> problems
that I have encountered are incompatibility with the Alfa trackball
and with VideoMaster Falcon, which crashes as soon as the mouse is
moved. I have tried the serial mouse port as well, with the same
results. The Beatlemouse works fine and have no problems with
boot up or key mapping. The Trackball problem can be fixed with a
little soldering. I talked to Jim today and Gizzmo is trying to
get hold of a copy of Videomaster to check it out. He said that
one person has had problems with Apex Media not working, but the
Gizzmo works fine on this Falcon and Apex-Expose setup.

The program for you is probably KCS Omega by DR.T. I use it plus another seq of theirs called Realtime, which can also do what you want, but is out of print. Omega is still available from Toad and several other places. It allows you to create and store in memory many seq, or patterns and then start and stop them from the computer keyboard. This can either be in step or in realtime. You can also create seq that start and stop the other seq or transpose them! Its also fairly cheap for a very full featured program.

I apologize! If idcheck.prg can't find the clock at id 6 then you
have a problem! I had a AdSCSI+ go bad a year or so ago. ICD exchanged it
for either $45.00 or $60.00. I can't remember which right now! Zippy
service too! Still lucky I had a spare ICD host, even though it is the one
without the clock! I really missed having my d/led files sorted by date!
Give them a call, but make sure it's from a touch tone phone, because you
will have to deal with their voice mail system from hell!

Erm, not off the top of my head, but most of the major ones have a nice selection of demos.

> I'd love to see what The Replicants, The lost boys et al are doing
> now, I haven't seen an Atari gfx demo since Punish your machine!

The ST demo scene is pretty dead now, sadly. Any new ones are for the STE, and it's the Falcon030 that is the new toy for Atari demo coders.

Patrick Bass <pbass19@chaos.magibox.net> inquired plaintively:

P > Subject: Is JTS owned by Uncle Jack and Sons The Subject says
P > it all... Is Jack Tramiel (and Sammy and Lenny) behind JTS
P > systems?

According to the press release and news articles, JTS is Jugi Tandon S_____ (systems?). I have seen ads for Tandon drives; same guy, I think. However, there is nothing to say that there isn't some hanky-panky going on regarding the true ownership of JTS.

You can think of the ATC-JTS deal as a way for JTS to go public - an Initial Public Offering. In which case you can look for the publicly traded stock (ATC) to reflect that fact.

In a very real sense, Daddy Jack and sons *are* behind JTS, now. Jack has a seat on their board, and I suppose Time Warner will too, although nobody has said anything about it. I don't even want to think about what their board meetings will be like. Anyway, it hardly matters, unless the license agreements that allow CLab and company to do what they do expire. And MagiC may have that covered. Maybe the Tramiels have become as irrelevant to us as we've suspected all along.

I just had a phone conversation with a fairly well-known Atari programmer who works at Time Warner Interactive - only they still call it Atari Games, at least in-house. That outfit is still apparently alive and well. Look for the coin-op game 'Area 51', coming soon to an arcade near you.

Yup! Tandon floppy disk drive mechanisms were used in most of
the Atari 810's and 1050's. Tandon was one of the primary suppliers of
5.25" drives in the early '80s. They lost a major order from IBM and
then tried marketing PC clones themselves, but that was quite a while
ago. They are apparently trying to get into the market for removable
media drives for laptop computers using a 3" mechanism originally
developed by IBM in the UK.

3796. Identified error in STiK/CAB

Newsgroup: comp.sys.atari.st
Date: 1996-02-22 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <4gh8n1$9vm@news1.wolfe.net>
Source record: 150100
Body handling: HTML body converted to readable text

Just completed some extensive testing with STiK and CAB and I have identified some detailed symptoms, although I have no idea what they indicate.

I set up a couple of pages on my ISP's server (http://www.3rdplanet.com/~starship for anyone who wants to look; the exact pages I was trying were startrek.htm and pac.htm), and so I had exact information about what the page content should be.

Attempted to access these pages, and while I could go to many palces that did NOT contain a tilde in the URL (www.conner.com for example was no problem at all, and neither is www.toad.net), when I attempted to access my own pages, I would get an error immediately after loading the html code itslef; that is, on a 1279 byte page (html code only, not including the graphics), I would get exactly 1279 bytes transferred, and then a bomb. I could then restart CAB and load the appropriate .HTM file from the cache with no problem.

To refine the test, I entered the URL of a text file located on the same server (http://www.3rdplanet.com/~starship/text/borg.txt) and got the full file with no trouble.

I then edited the startrek.htm file, adding about 50 bytes of text AFTER the tag, just to see what would happen. Again, I got the bombs after the entire file was transferred, INCLUDING the added text.

I tried it with graphics on, graphics off, background graphics on and off, and text instead of graphics, in every possible combination. The results were always the same.

I have a 10mb cache setting, with close to 200mb free on the drive, so that's no problem (and there's no problem with many web pages).

My suspicion is that there's a problem with the tilde ("~") character when writing to the cache, or possibly when reading from it (although I can't prove it either way).

QUERY: Is there any practical awy to turn off caching completely? If I set the cahce size to zero, will that do it?

Well, back to the report at hand: MG-FTP works perfectly, although I haven't tried it anywhere except my own ISP's server. I would like only 2 things that don't appear to be planned (as near as I can tell from the German README file): A medium-rez RSC file, and re-sizeable windows. Oh, and I'd like to have filenames sent to the server in

lower case, rather than upper case.

IRC works fine. The ability to run it in a scrollable window would be nice.

I haven't tried the forecaster yet - maybe later today, after I have some sleep. And I have obtained Swampdog, I'll give it a look soon.

Hope this helps someone.

The cynic in me would say "yes". However, the name of the founder of JTS
is Jugi Tandon (sp), according to a press release. For a long time back in
the 80's, Tandon floppy drives were one of the more common ones used in
PC's (and, if I recall correctly, Ataris as well.)

IMHO its ram-it-down-your-throat advertising, by both MS and Intel,
such that just about any joe public on the street, who's about to buy
a computer, and hasn't had one before, will know of only 1 type of
computer, an Intel PC running Windows..... so many people do not know
of an alternative and consequently PCs become profitable !

I finally fixed the problem, I needed my printer which was connected,
turned on, something to do with the joystick controlled players, even
though they wern't used, it must check the printer anyway.

If you find that the game loads to the music screen and crashes (3/4
bombs) this is due to conflicting DAs and Auto progs, you need to run
it with a clean system, no DAs and No Autos (I think a Hard Disk
Driver may work) and it should go fine !

>backed up on them...

I do a similar thing with the backups of my Harddisk on HD disks
formated to 2Megs........ however I'd like to ask you how often you
read to and write from them, I'm sure you'll find that if you read and
write to them after a very short period of time you will find them
failing !!! try it and see !

Ran 'ZAP' tonight from the STF Wonderdisk. A 12K game packed down to 8K..... I tried running it from the desktop, with 3.2Megs of memory Free (the other 800K taken up by DAs and Auto Progs).

Funny message flashes up 'need more memory, press a key to return to desktop'. Wierd or what, a 12K prog needing >3.2MBytes !!! whats more this was the ONLY file, no data files, nothing.

Anyway ran fine from a clean system with the full 4Megs, strange, must have been 'lazy' coding ! (bet this chap's working for MS now !!! <G>)

> but where do you plug in and out all the audio channels ?
Plug your audio input into the mic jack socket on the back, it samples
D2D, with the correct software.

> - Can I attach a standard PC monitor on ?
Yes

> - resolution and colours in all combinations
this gets VERY complicated:
ST compatible modes

640*400 in 2 Colours (no palette)
640*200 in 4 Colours (262,000 colour palette)
320*200 in 16 " "

320*200 in 256 and 65500ish colours (palette as above)
640*200 " " " " " "

interlaced

640*400 in 256 and 65500ish colours (palette as above)
320*400 " " " " " "

This is what I know from using it with a TV, nb theyare set using
interlace, and 40/80 columns in set video (40 columns = 320 * #, 80
columns= 640 * #)

as for with a monitor, I don't know yet !

> - all interfaces
Printer, modem ports (2 i think), SCSI adaptor, mouse, joystick,
analog joystick (for joypad with Jag), sound input and output,
monitor, LAN port, and a few others as well

> - TOS version
4.01-4.04

> - I guess it comes with HD floppy (Y/N) ?
Yup !

> - CPU speed (your opinion) ?
16Mhz, (in a 68030 CPU) unless its been upgraded (a bit unlikely !)

> - You name it.
anything else let me know !

Does anyone know where I can get the doc files that come with
Backtrack V4.01 by Karl A. ÿygard ???

I found the prog in the Auto Depack V1.2 Archive, however there was no
documentation with it..... Any ideas ?? I've tried places like CNAM
for a seperateversion but they appear to only have a very early beta
test version !

If you can help either mail here, or email me at
vrc@phil4.demon.co.uk

Thanks

3812. Mint user manual exists ?

Newsgroup: comp.sys.atari.st
Date: 1996-02-23 00:00:00 UTC
From: fov1186@iperbole.bologna.it
Message-ID: <fov1186.3.312E4CFE@iperbole.bologna.it>
Source record: 149866

I'd like use Mint , of course with Mint-Net and CAB , so I could finally use my PPP internet access !!
But after downloading a lot of KB of software all around (like Mint 1.12 , MintNet 080 , TosWin , ecc.) and try to "decript" mistical (for me) documentation , I still haven't found what i'm looking for : how can I use all this ?
Can someone help me ? Exists some kind of user manual , or guide , or everything can help who start from zero with Mint ?

Thank a lot to the Atari community !

Ciao

Paolo

Yes, Link II will work with parity, as will AdSCSI+, also from ICD.
Link I was the only one that didn't work with parity, much to my dismay after
I bought, fortunately my dealer(Compuworld) was good enough to exchange it for
an AdSCSI+.

PF> of file ??? If so what's it called ????

Nope. What you do now is find the Magic Shadow Archiver, use it to de-compress your file, which should then resemble a whole floppy disk with a bunch of files; perhaps one or more will have an extension you recognize.

The sixth annual Houston Atari Safari computer show will be held at the Four Points Hotel, 7611 Katy Freeway, on February 24th 1996. Show time is 10 am to 6 pm.

Primarily a vendor show, this is the place to get the latest software for TOS, 8-bit and Jaguar systems. Vendors include 3 of the largest Atari retailers in North America:

Toad Computers
Computer Direct
Systems for Tomorrow

Also developers at the show include:

Branch Always Software
ChroMagic Software Innovations
Crawly Crypt Corporation
Gribnif
Trace Technologies
Binary Sounds

This is the place to get the latest software for your Atari system. Admission is $4, and besides getting into the show, includes a Safari Pak of newsletters, catalogs, brochures, software (ST and 8-bit), etc. Door prizes at the show include ST software (Diamond Back III, etc), 8-bit software (Atari touch tablet, etc) and Jaguar Software (White Men Can't Jump w/Team Tap, etc). See the latest Atari goodies on Feb 24th at Safari '96!

3821. Wanted: Info about reSolution

Newsgroup: comp.sys.atari.st
Date: 1996-02-23 00:00:00 UTC
From: MHOUSER@news.delphi.com
Message-ID: <4gktqr$dlo@news2.delphi.com>
Source record: 149875

In a FAQ I found through the web, there is a reference to a graphics upgrade card for the ST called "reSOLUTION" made by GengTec (Germany) and available in the U.S. from Rio Datel. The 800 number given for Rio Datel is no longer Rio Datel, the other number is incomplete, and I suspect that Rio Datel no longer exists.

Does anyone know if the reSOLUTION upgrade is still available? If it is, where can I get it? It looks like this upgrade would be just perfect for my 1040ST.

Please respond by e-mail, since I haven't frequented usenet much lately.

Thanks for any help you can provide.

Mark Houser
mhouser@remedy.com

Here's the info from the FAQ:

reSOLUTION SuperVGA by GengTec (Germany)
* 8 resolutions, 320x200 through 1600x1200
* 16 colors without driver, 256 out of 256,000 with driver
* 1 mb RAM
* uses a standard VGA monitor
* Mega ST or regular ST
* available in U.S. from Rio Datel, 1-800-782-9110, (702) 454-700
(1024x768 is the highest resolution with 256 colors. Driver is called Multicolor VGA option. Compatible with NVDI and Blitter. Multisync monitor recommended.)

Message-ID: <825036458.26717@grasper.demon.co.uk>
Source record: 149906

Magic 4 arrives in the UK but with a VERY flimsy manual indeed ..

since it comes with device driver support it would help if we knew
how to install (or write ,since NONE are supplied) them !!

Instead it refers you to a Magic developers guide , not supplied , where
can this be obtained from ??

in another section it refers readers to the "mint documentation" but does
detail how much magic impliments mint calls , presumably again the above
guide is needed :-((

Tom Seddon (T.W.Seddon@ncl.ac.uk) wrote:

: What I'd like to know is: is there a (cheap!) way of fixing this? Can I
: plug another SCSI hard drive into the progate? (would be nice... can the
: ST handle 500MB+ drives?!) Or does anyone have any suggestions?

I did exactly that - plugged a second hand seagate .52Gb drive into where
my old 20Mb went (4160ste). I use the GEsoft adapter - I'm fairly sure
that's relevant but the GEsoft is probably the crappiest there is!

Best wishes

Try MidiGrid - it does what I think you want to do. Only thing is, don't know if it's supported anymore, but the people who created it (Composers Desktop Project) are still around. And in York!

The phone number I have is 01904 613299 (Room 2, 11 Kilburn Road, York)

Hope that helps

: Anyone know what this program is called, or where I can get it?

It's called Logo, but as to where you can get it, I've no idea. I don't know if it's public domain or not, but I think it's on the USA Language Disk that comes with original STs. If you're son's interested in programming however, you might want to look into GFA Basic. In addition to being an excellent (and relatively easy to learn) language, it also features the ability to accept logo commands in its drawing functions.

: Thanks in advance

ok don't worry, you need to download a program which set up the
nvram. In this program, you'll see that you can choose the language
for the keyboard or for the desktop, the resolution during the boot
etc...(you can find that kind of program in every server on the net)
Bye

```

Daron - long time no talk. :) I have the exact same modem and I have gotten the same thing, however I have gotten that on other modems too. It happens when the modem connects incorrectly. Normally it is a problem on the other end.. (My ISP recently fixed their lines and now all is well).. Ie - you are connecting 14400 rather than 14400 LAPM COMPRESSED, this happens almost everytime you get a bad connect. Dont know what to tell you other than check with Demon.. It's probably due to line noise during the handshake.

```
: If anyone uses such a modem, and can assist at all it would be greatly
: appreciated, especially with any recommended settings as everything I've
: tried to set up in the manner expected tended to make maters worse.
```

I wouldnt worry about the modem too much.. I have had the same things happen before from time to time.. What kind of modem were you using before? Have you had these problems connecting to sub-28.8k modems? I dont recall having any - just with 28.8k's

```
: atl5
: B0 E1 M0 Q0 R0 V1 X4 &E1 &E4 &E6 &E8 &E10 &E13 &E15 %C0 #C1 &C1 L3
: $MB28800 $SB38400 $BA0 &W0
```

The $SB setting is almost useless since the modem automatically sets it with the computer.. That's about the same as mine.. Nothing odd.

To correct this probleme you have to use a programm to modify the
non volative ram (NVRAM) of your Falcon.

You can use BOOTCONF in
-> ftp.cnam.fr/pub/Atari/Falcon/Disk

But I wonder if you didn't get one when you buy your Falcon.

With it you'll be able to change the Language.

Don't know if the Replicants are still doing demos, but TLB have all stopped writing demos due to increased workload at university. TCB went the same way. Aggression have moved on to the Falcon (as have a number of others), Synergy have disappeared, their last demo being The Synergy Megademo (very good one, that). That I can recall, a few very good and more recent demos include both of Oxygene's demos (Flip-O-Demo and Calimer-O-Demo), Froggies Over The Fence (Legacy/ST-Connexion/Overlanders), Snork (Futur Minds), Phaleon Gigademo (NeXT), Dreamzone (Wild Boys) and Oh, Crikey! Wot A Scorcher (TLB's farewell demo).

SED is a sector editor, that's right. It has explicit options to install
a hard disk driver and make a hard disk bootable. SED 5.xx is a GEM
program, so it's relatively easy to use and to grasp. It also contains
a simple partitioning option.

SED is not yet available everywhere. Formely, it was part of my floppy
and hard disk book. The book is out of print, and so I have released SED
(in source code form) to the German Mausnet so that everybody can use and
improve it. I have not distributed the executables except for book updates.

If there is significant demand, I might be talked into uploading SED
to some ftp server. Note, however, that I will not officially support it,
nor will I translate the program or the docs into English. I just don't
have the time.

Sorry,

Claus

Escom have also relaunched the Amiga 500 at the same price - 400ukp,
and have launched the Amiga 2000 with 68040 chip at, I think, 2000ukp. At
this level of ridiculous marketing, Atari can do better than Escom!

Source record: 149922

I have a Mitac 14" Multisync monitor plus the Blowup 030 screen enhancer
for the Falcon 030 for sale in the UK.
The Falcon can drive the following resolutions on this monitor using the
Blowup attachment :-
1024x768 16 colours at 50Hz Non Interlaced.
800x600 256 colours at 60Hz Non Interlaced.

The Blowup configuration utility may be used to adjust the screen res to
individual tastes.

The asking price starts at 200 Pounds (Sterling) including next day courier
delivery (UK only).

Email me at jim@jimt.demon.co.uk with any offers

Thanks.

The extention .MSA is used by a program called Magic Shadow Archiver.
This is a archive program that compresses a full disk into one file.
A .MSA file can be decompressed to the original disk (disk will be formatted
the same way as the original disk).

The Magic Shadow Archiver can be found on many ftp sites try atari.archive or
hensa.

Source record: 149928

Hello,

you don't say when or why this happens. I have had a similar probleme
with a demo.First, try to manage your NV RAM correctly. If it's seem to
be correct, the only way I have foud is to reset the NV RAM. You can find
some programs for NV RAM in any ftp site. If you don't find them, email
me.

Good Luck.

Alain-Pierre

> in all detailed bug reports.

Today Michael Guse (gooseman@on-luebeck.de) released Version 1.1 of
MG-FTP (ftp.on-luebeck.de in /pub/systems/atari/internet/stik/ftp). New
features are: identd-Server, Server-Hotlist, Up- and Downloadpath, default
login for anonymous-ftp...

3848. program to convert truetype fonts to Atari?

Newsgroup: comp.sys.atari.st
Date: 1996-02-23 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <312e04cc63e51@sn.no>
Source record: 149930

Is there a program around which converts trutype fonts to anything the Atari ST can recognize? I have Fontkit 4 but it doesn't convert the majority of font formats out there.

I'd also like to know if there are other font format converters than those which do truetype... perhaps bitmap fonts as well.

Hallvard

3849. Looking for information on Atari Ultimas

Newsgroup: comp.sys.atari.st
Date: 1996-02-23 00:00:00 UTC
From: rgregg@gs201.sp.cs.cmu.edu
Message-ID: <4gl5e7$ijg@cantaloupe.srv.cs.cmu.edu>
Source record: 149931

I've been putting together a document of collectors' information about the Ultima computer games. I know some of these were released for the Atari computers, but not exactly which games and which computers. Could someone that either owns (preferably) or knows about the Ultima games that came out for the Atari platform contact me via email? Thanks.

Robert

3850. Hard Drive help!!

Newsgroup: comp.sys.atari.st
Date: 1996-02-23 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <825159770_OASIS_@husbands.demon.co.uk>
Source record: 149932

Greetings from myself!

I seem to have developed a small problem with my hard drive. Here's what happens. From running normally, if I have to reset the machine for any reason by pressing the switch on the back of the ST, when my desktop appears again, all my drives are in place and evrything looks normal. However, when I click on any of the drives, it opens to display NOTHING! O bytes used in O items! This is true except for Drive C which is my boot drive. However, if I power evrything down and restart it up again, it works OK generally (but only about 80 percent of the time).

I use Superboot V.7 to control all my accessories etc.

Can anyone help? I live in fear that one day I may not be able to get anything back! I have backups but would rather not get into that if there is an easier fix.

Thanks!
=---=
Your friend and mine, SIMON HUSBANDS simon@husbands.demon.co.uk

3851. Help with Oasis

Newsgroup: comp.sys.atari.st
Date: 1996-02-23 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <825187832_OASIS_@mbha.demon.co.uk>
Source record: 149933

I am using Oasis with 2 user names. If I write (say) a news posting and an email, then switch to the other user set up and write an email, it overwrites one of the mqueue items already there. This is a real bugger and I have lost lots of news and mail :-(

Is there anything I can do to fix?

All help gratefully received

3852. NOS & Pipex

Newsgroup: comp.sys.atari.st
Date: 1996-02-23 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <960223Z182400.387dbrewood@nest.demon.co.uk>
Source record: 149934

Has any kind soul got a copy of STARTUP.NOS for the Atari Falcon that will
work with the Unipalm Pipex (in the UK).

Asking as Pipex can't give values for:

Hostname
smtp gateway
ip addr
domain addserver
time server

Can anyone help??

I've hacked up the following so far with no luck:

```
# startup file for KA9Q-NOS ST (DIS Version)

# put your hostname here
hostname dial.pipex.com

#put your ip address here
#ip addr [0.0.0.0]

# I am trying 134 for the baud rate at the moment
# Attach the SLIP driver to the serial port
# if port 0 slip dev buff mru baud
# --- ---- - ---- --- ---- --- ----
attach asy AUX: 0 ppp sl0 32767 1500 134

# how many hops before a packet is discarded (Time To Live)
ip ttl 64

# tcp parameters can be tuned.

Help!

I have just got Linux (Great - thanks Darryl), and mosaic2 to run
under X.

I need to know the set up for comms. I have configured the kernel to
include slip, ppp and cslip, but there is no ppd or any dialler
script. Also I need to know how to set up the inittab and gettydefs
files (I run a TT using modem2 at 38400).

Thanks in advance for any help...

I don't recommend this for serious use but is dead handy if you must
have a graphic displayed (and you can see what a Falcon Ease desktop
looks like) ...

The BIGSCRN utility allows you to emulate a higher rez screen. As I
easily got it working with MagiC 2.0 and Ease emulating a 16 colour
640x400 screen then it should not have problems working with other
combinations. NVDI has to be turned off though -(.

It doesn't yet. Probably in six months but it's still being developed.
By all means get it as its great but don't rely on it for your basic
connection.

>But then people talk of Telenet(???), using STalker, PPP accounts with
>(ah, Mint was it?), etc. I'm drowning! Someone toss a lifeline, & list
>the modes of accessing the 'Net, and the Atari packages that use those
>modes, & what one gets from the mode. Please. :)

I could waffle on for ages but it all boils down to this ...

For a useful connection you must be able to Email, access News and
access remote sites. These three will give you the ability to get
anything else you want.

Mint works like unix. It is multitasking and will give you a powerful
and flexible connection. It will even allow you to plug Cab into a PPP
connection (and it works more reliably I'm told). Getting it installed
and working is not for the faint hearted!

The NOS package comes in two flavours - a Gem offline reader and Nos (the Oasis package) or a command line driven offline reader and Nos (the Snews package). Nos does the online part. It supports SMTP (simple mail transfer protocol), NNTP (network news transfer protocol), FTP (file transfer protocol) and other stuff like telnet. It has a few bugs which can cause problems for some people. The two common ones are both associated with posting news. One bug can be avoided, the other cannot without changing versions but I still think it is the better initial choice.

You will need to find out the following because the PC software is probably supplied with them already set ...

Your IP address. If you are told it is dynamic or the plonker on the support line doesn't know what you are talking about then use [0.0.0.0] otherwise use the address given. Nos can't complete the logging in process without it.

The DNS (dynamic name server) address. This will also be in the form [xxx.xxx.xxx.xxx]. Nos has to find IP addresses constantly - the DNS supplies them. Without it, Nos can log in to your provider but will be unable to connect to anything, even the machines at your provider.

In the STARTUP.NOS file, comment out the line

dial sl0 dial.txt

to

#dial sl0 dial.txt

which stops Nos automatically dialling when it starts. Then type the line manually. Nos will now show you the text for the log on negotiation as it takes place so you can spot where it goes wrong (hopefully it won't). Then uncomment it again.

I can't comment on solutions for other packages because I know nothing about them.

fezzy@opera.iinet.net.au (Peter Feszczur) spake thusly:

PF> un-zipped it and was left with CALIMERO.MSA.... What do I do
PF> with it now ???? .....is there a player programe for this type
PF> of file ??? If so what's it called ????

Nope. What you do now is find the Magic Shadow Archiver, use it to de-compress your file, which should then resemble a whole floppy disk with a bunch of files; perhaps one or more will have an extension you recognize.

3865. DynaCadd and CodeKeys

Newsgroup: comp.sys.atari.st
Date: 1996-02-23 00:00:00 UTC
From: tderrick@acpu.com
Message-ID: <960223190133280 22@acpu.com>
Source record: 149947

Hi, everybody!

I recently bought DynaCadd, and have a conflict that I would like some ideas about. The version of DynaCadd I have is 2.04.06 and uses a joystick port dongle. I didn't think I would have a problem, and I didn't until I tried to use a CodeKey macro with the dongle plugged in. Oddly, the macros don't type in as they did (timing problem). They don't complete unless the shift or alt or control key (whichever I use for the trigger) is held down *exactly* the right amount of time. Unplug the dongle, no trouble. This is on my TT - I doubt seriously that I will ever try Dyna on one of my ST's. I am told that there is a dongle-less upgrade, but Ditek (so far) is unreachable. CodeHead Charles Johnson is pretty unreachable, too, although I doubt strongly that this is cure-able from his end, even if he would care to try.

This shouldn't surprise me as much as it does, because using CodeKeys with some programs (Mtn Reader for one) has another odd feature/bug - I can't move the mouse or press a key while the macro is playing, or the macro stops.

This conflict with Dyna is not the end of the world, but I would like to know whether anybody has any suggestions for reaching the DynaCadd people, or a suggestion for any other macros prg that might not have this unwanted feature. It seems unlikely that another macros prg would do as much as CodeKeys is capable of, but I don't use CodeKeys to its fullest extent, so a substitution might be workable for me.

I already thought of buying a joystick extender and putting a switch in the cable, or borrowing my son's MouseMaster to see if I could use it as a joystick port switch, but this box looks funky enough without doing *that*.

Anybody? Any suggestions gratefully received.

>board to work together ?
>Any suggestions about the running order and settings.
This really is just a suggestion but:

if you run nova vdi 2.6 and NVDI 3.02 then there will be problems, as
they are both VDI replacements, so if they don't crash together, then
essentially only 1 will run, take your pick, and either get rid of the
other, or place it before in your auto sequence.....

then follow that with Magic

ATb.

Depends on your host adapter. The ICD AdSCSI and AdSCSI Plus handle parity
fine. I run a Conner off an AdSCSI Plus with no problems.

> Chris W.
> /|\

I am using an Atari Mega/STE with HSMODEM and getting 115,200 on my port with STiK. STiK is able to
use a prot speed much higher than 19,200. Use FSERIAL.CPX to set the port higher. STiK also comes
with a program that shows what your port is capable of. Run it. With HSMODEM I can get 230,000 (wish
my modem could do that), but alas I am stuck with the slow speed of 155,200. ;-)

3872. Replacing Falcon Floppy Drive ?

Newsgroup: comp.sys.atari.st
Date: 1996-02-24 00:00:00 UTC
From: leigh@lapd2.demon.co.uk
Message-ID: <312ef8d3.112382@news.demon.co.uk>
Source record: 149754

Has anyone had to replace the HD floppy in their Falcon ?...Does a standard PC HD drive work, if so how do I make the Falcon accept that the drive A is connected. I presume it will be the jumpers. Looking at the rear of the Mitsubishi PC drive that I have, on the left you have the usual 4 pin power connector, to the right of that is a block of 6 pins for jumpers, then there is the large array of pins for the ribbon connector and finally another set of six pins, this time stacked vertically.

```
pwr . .
| | | | : : : (large connector) : :
```

this is something like the layout.. any ideas desperately required

PS

I have spoken to various large companies, none of which have any specific falcon drives and all think that a PC drive should work but not sure exactly how.

That's all for now folks.....Leigh Caudwell.

I posted an article about just such a problem. The "trick" is to get NVDI to
do the landscape printing, not AW. Just tell AW you have a non-standard paper
size which is wider than it is tall. (Apologies to the person who told me
this, but I can't remember who you were. Anyway, you deserve the credit for
this answer, not me. :-)

> PC demo scene?

Big Alec is (was?) a member of Delta Force, who are still kicking around I believe, well done, chaps! I think their latest one was Froggies over the fence. It came out a couple of years ago and got very good reviews. If I remember correctly, it contains some Spectrum 512 screens with 14/16kHz tracker music. Damn good for an STFM!

Last I heard of AN Cool, was his M-DEMO 4 (a pretty loud and brash music affair, very good mixes, that guy has talent! STFM compatible too, I think. Yes, most likely in fact) about two years ago. That was his last one before going to do national service. I don't think many of the ST crews have moved to PC - they've either gone onto the Falcon, naturally, or got jobs in industry.

The Pixel Twins are no more... Douglas Little has a full time job, and is a member of Black Scorpion Software, who churn out amazing quality commercial stuff like Apex Media on the Falcon.

The Lost Boys sort of finished in 1991 with Ooh Crikey Wot a Scorcher... The Respectables are on the Falcon, as are Aura (currently working on a Wings of Death type Falcon shooter, although most of the members have quit, sadly. They made an *excellent* sound disk for the ST/STE called HIGH FIDELITY DREAMS, you'd be well advised to get this - 8 superb tracker modules at 16kHz on STFM and 50kHz on STE, simple but swish design...)

That's all I can say off the top of my head, hope it's of some use.

S.Lai

There are plenty more modern tools, but none more powerful for any
platform, let alone the Atari.

I think the Maus groups (or some of them) are publically available now as
we've just got them here, and they weren't available when I asked a year
ago, so ask your provider. I think I've already got 4 or 5 Maus newsgroups
dealing with Atari ST.

There is a GNU version of proff, available from (at least) the
umich archive as .../Tos/Gprof/gpfbin09.zoo (source code gpfsrc09).

An english site is

src.doc.ic.ac.uk/packages/atari/umich/Gnustuff/Tos/Gprof

but there's lots of mirrors of this archive.

From: lwright@wintermute.awinc.com
Message-ID: <4gnt5c$t5i@kryten.awinc.com>
Source record: 149768

I'm considering putting up a DTP FTP site. I've got over 800 Calamus fonts and a whole whack of CVGs and IMGs to offer. I'm just measuring interest in such a venture.

AFAIK there is are no FTP sites currently offering more than a dozen Calamus fonts or DTP stuff at all. If I'm wrong, please correct me.

If you are interested in this new FTP site, let me know!

I have a brand new copy of Codename Iceman for the Atari St
(has never been opened)--still in wrap.
this is a game put out by Sierra sort of like the Kings
Quest type.
I will take $12.00 + 3.00 shipping=15.00(immediately)
or best offer over 10.00 by Feb 29th.
Who knows it might be a collectors item someday being it
has not been opened.

>power (TERMPWR). AFAIK the GE-Soft adaptor doesn't - so the drive must do
>it for itself.

I bought a new 540meg SCSI drive from Gasteiner and plugged it into my
ProGate Profile II. As suggested above, it wouldn't do anything until I
had someone (Systems Solutions in my case) reprogram the parity on the
drive. However, if you're likely to be adding other SCSI components later,
then buy an ICD Link, and unplug the host adaptor inside the case. You'll
lose the busy light on the front of the case, but it will work without
need of reprogramming and you can be moer confident of the success of
daisiy chaining other devices in the future.

Good luck

E-mail me if you need more help

3890. Message from New Zealand

Newsgroup: comp.sys.atari.st
Date: 1996-02-24 00:00:00 UTC
From: sven.bornemark@p56.dada.ct.se
Message-ID: <ftn_2.200.136.56$fidonet.org_312ec4d0_Sven.Bornemark@p56.dada.ct.se>
Source record: 149772

Hi everybody,

Look what I got this morning:

-------------[cut here]-------------------------------------

Tariland Computer Club Auckland New Zealand
'Keeping Atari Alive in New Zealand'

Announcing World Wide Search for Magazine contributors.

****** Message from the Club President *******

Welcome to the Tariland Computer Club in Auckland City, New Zealand.
Auckland City is known as the City of Sails and plenty of Volcanoes!!
If you are ever down this way, do not hesitate to look us up and come
and stay a night or two!

The contact address is:

Tariland Computer Club
c/- Brian Becroft
PO Box 332
Kumeu 1250
Auckland
New Zealand

The contact telephone is:

(09) 412 9700

ask for Mario or Brian.

Internet address:

mbecroft@iconz.co.nz

The Scene:
****

Let me show you around. We have three computers on this side of the
room. First there is the TT030 8meg 850HDD whwere Mario works most of
the time with his first love - Lattice C, which he hasn't had that
long. It is an obsession probably, that and Internet. He is currently
working on aprogram to show pictures, text, and figures, for a
friends stamp collection. like a spreadsheet that includes fields
with pictures...

Next to this is the Falcon, the basic machine where we run Apex Media, digital recorders and such like.

Next to this is the 4 meg STFM, CD ROM drive and 850meg Quantum for running the club BBS. We have 4 CD ROMs and intend getting more.

In the next room (an old freezer) is the music studio run by a Stacy4/40, a Fostex E8 recorder and about a dozen synthesizers.

Around the walls are examples of Artwork and Layouts from our love of DTP.

The Story
****

Every month we produce the Tariland Club magazine on Calamus SL and printed on our trusty SLM 804 Laser.

The Problem
****

We are interested in maintaining a pro-active attitude for the Atari machine so as to help the many owners in New Zealand, but we do not have enough contributors who would write articles for our magazine. It has quite a reputation! We cannot help it being better than most!

The Answer
****

You are cordially invited to help your friends on the other side of the Earth! We have a magazine swap with ten clubs around the world in Australia, USA, Canada, Sweden and Spain. Some of the people reading this would have contributed to non English Atari magazines. I would love it if you would send your articles to me in an English translation! We are interested in all things, not only reviews, but what programmers are up to, what individuals are using their computer for. In our club, for instance, we have a man using his Atari for Packet Radio. We would love to hear of all the uses that people manage to put their computers to! Do you know anyone who is using the Satelite tracking programme to download weather information, anyone using the Atari in Industry Control, using it to operate Knitting machines etc. Whatever it is, we want to hear it.

Please help us by contributing your stories in English, we will forward you our magazine with your published work as a mark of gratitude for your help. I like the idea of co-operative help. Remember, that when you write for us, ten clubs around the world get to see it!

This promotion that you have now read is an example of the pro-active attitude we have to help support those that choose to stay with the Atari platform. Please distribute this complete message to your friends and please feel free to publish it in your country.

Do not hesitate to contact us here in New Zealand!

Remember the email address is:

mbecroft@iconz.co.nz

>>DO I need HS Modem or something? What is HS Modem anyway?
>>
>>HELP! I would really like to get the freakin' thing working!
>>
>>thanks :)
>>
>>*steve

sounds like the problem is connecting STiK by using Connect. My
suggestion to test this is to use the irc.prg supplied, if you can get
that to work, ie. talk to people with it then you get STiK working ok,
otherwise STiK is the problem.

My suggestion to solve the problem with STiK is to use it as it was
designed, ie. let it do the connection and negociation, not Connect,
otherwise STiK probably misses vital bits that it needs......

try it and see !

When you say password, do you mean some sort of copy protection, eg. 3
rd word of line 10 on paragraph 6.... if so then you've probably got a
pirated copy..... otherwise what do you mean, a cheat ?? a jump to
level password ??

you could try using a sector editor to 'look' trough the program, and
try and find any english words !

I tried the Cookie Jar method, and it sort of worked.... Programs like SysInfo suggested that the FPU wasn't there (also had fun changing my computer to a TT ! <g>). However when it came to running programs they run as normal, accessing the FPU as they would normally, seems they don't check with the cookie jar, but with the hardware ! oh well, nice try.

Thanks

Can't do that as my copy of GFA 3 came from an STF Coverdisk, so I
only have the main program, a brief manual and a copy of Tranquili
Mnilu.... so far I've managed Ok, but without explanation the RSC
commands are quite daunting !

Here are some of the bits i _do_ know about (or at least I think they
are right <g>):

In article <Pine.ULT.3.91.960219160651.26088B-100000@mhc.mtholyoke.edu>
Katherine L Ellis <kellis@mtholyoke.edu> said:-

> Hi everyone, I have some questions about some software, which I
> have no clue, do I need them ?:
> What is tex ?
probably not needed, I think its some way of doing fancy text, with
symbols, undelines etc. etc. for documents accompanying progs etc.

> What is poscript ?
an output from DTP and some fancy Word Procs that allows you to send
the output for printing by high tech super high resolution, but very
expensive postscript printers. Unless you are going to go into
professional DTP then you probably won't need this !

> What is GNU ?
A DP (free) C programming thingy I think.

> What is Gem-dos ?
GEM=Graphics Environment Manager, puts things like menus bars,
windows, alert boxres etc. on your screen, quite useful.... but
already built into the computer, and loaded from the little chips in
your comptuer when you turn it on.

DOS=Disk Operating System, the bit of GEM and TOS (The Operating
System) that does all the disk and file related stuff, again built in
and run when you turn the computer on.

> What is E-mac ?
A text editor. IMHO not a very good one, if you want a good Shareware
one get Everest. for commercial there are allsorts !

>--------------------------
> Also is it possible to emulate a PC 80486 on the Falcon 030?
> Because I Know that is possible to emulate a 80286 but it's
> pretty old. And the price pretty high. When you know that you
I seem to remeber a 486 being planned, but don't ever remember it
being released. Also it won't be any cheaper than the 286 emulator !

> can get a 486 portable packaxx bxxx, second hand for $600.
Get yourself a 2nd hand 486 then, you are unlikely to have some of the
incompatibility problems an emultor would have, but you'll get all the
normal PC ones...

Hop this all helps

Hi.
I just bought a 213MB Maxtor hard drive from Toad Computers. I formatted it and partioned it and everything seem's to be ok. Whenever I write to the drive though, I am getting >sense47< messages on the screen. This value,47, is not listed in my Adsci cpx module so I don't know what it is trying to tell me. I read that each manufacturer can implement these as they see fit, I was wondering if anyone has seen this in a similar setup. I am using an ICD Advantage + host adapter and version 5.5 of ICD's driver software. Any info would be appreciated as I want to get another one of these drives but want to make sure they are ok with my setup first!

From: dave@mbha.demon.co.uk
Message-ID: <825275114_OASIS_@mbha.demon.co.uk>
Source record: 149788

Oops, I need more help...

Does anyone out there use minicom or seyon under Linux/Xwindows?

I get an error message with minicom saying /dev/modem device busy (or words to that effect). The program seems to expect to see /dev/modem but I have set up /dev/cua1 (modem 2). So I set up a symbolic link with the above result. Am I doing something daft?

With seyon, running from X complains about a missing lib file (can't remember the name).

Also, since I included the network drivers, I get a new message at boot time (fair enough), it says 'Configuring network drivers' then prompts NET:. if I hit return it newlines then inetd and eventually the login.

I only want network drivers to run ppp, slip, cslip. Can I disable anything here? What does NET: expect?

<sigh> I wish I had more docs...

All help gratefully received...

The statement I read said something to the effect of 60% of JTS is owned
by "Atari stockholders" and since the Tramiels only had about 51% of the
original company they now hold roughly 51% of 60% of the new company...

Exactly. So the heads move to the park position. Then you shut the drive
down and the mech tries to move the heads to the park position... Where's
the danger in that?

I don't know if I have anyting technocally useful, but changing resolutions without rebooting is something I'm trying to do since I hate changing from low to med and back again just to read a doc file and play the game.

But I took a resolution changing routine from an assembler source code and made a small program out of it. It involves reading what mode your in from XBIOS and putting the mode number and screen addresses in the stack. I did teaching my self ASM programing by the way.

I ran it from the desktop and guess what? It switch resolutions without crashing! However, the desktop look screwed up because it still thinks it's in the old rez mode such as going from low to med halfs the desktop screen. And the text color is yellow, so if I can preserve the pallette and restore after the change it should work...theoretically.

But reading a text file from the desktop had no problems, all 80 columns were filled out. If I can handle the yellow color, it would work with no problem. I'm planning on putting this in a special text reader for viewing files in med rez while opening the program in low rez. If anyone can add anything on how I can suceed at this, or tell me where I screwed up, please e-mail. Thanx! :)

Body handling: Binary attachment payload not displayed: TOADTALK.DOC, VALUES__.DOC, TABLPOET.DOC, TABLECON.DOC, 1ST_PRNT.PRG, 1ST_WORD.RSC, 1ST_WORD.PRG

I am helping a professor get some work saved on an ST to the IBM platform. My Prof. claims to have saved the document(S) using First Word around 1988. I used a small program to read the ST disk on my PC. I have attached the files, they appear much like IBM PC files with eight characters and a three character extension example "toadtalk.doc"; is this common for the ST? Can anyone tell by looking at the attached files, the program used to create them and or where I might be able to find a program to convert from what I have to RTF or another format usable by the IBM PC. Please contact me at one of the following locations:

hallvart@sn.no (Hallvard Tangeraas) spake thusly:

HT> Is there a program around which converts trutype fonts to
HT> anything the Atari ST can recognize?

Correct me if I'm wrong, but I thought the ST would recognize and
use TrueType fonts in Speedo v5 and NVDI 3 or above. Did I miss
something?

Toad sells 'Type 1 Converter' which converts TrueType or PS Type One
into ECF files. FontVerter (also sold by Toad) will then convert to
PageSTream (DMF) or Calamus (CFN) files. According to the catalog.

>out in PD at all?

The whole purpose of interlaced resolutions is that you trade-in the higher
refresh-frequency for a higher resolution. But of course you can't have
both at the same time using this method. Make your choice and be happy
with it. No 'flicker fix program' will fix this for you, and if it did, it
probably would change back to a non-interlaced resolution.
Then you'd be back where you started.
To really solve this you would need a special videocard _and_ a better
monitor...

Sure, it clearly says so in the manual. The point is, I wouldn't bother as
there are still some programs that do not like MagiC and furthermore RAM
is just so much faster than ROM. But if you really really want to... yes.

Most accelerators have a setting 'cache off' which is NOT the same as true
8 MHz mode. Check your manual. Maybe you're still running at 16 MHz but
with cache switched off. As this is the 'slow' setting maybe you confused
some settings ? Otherwise nothing will solve this exept putting the old
original processor back inside.

3923. Setting up MiNT+Net

Newsgroup: comp.sys.atari.st
Date: 1996-02-24 00:00:00 UTC
From: allfree@scs.unr.edu
Message-ID: <4gnhk8$o07@silver.scs.unr.edu>
Source record: 149805

Could some kind soul please help me set up MiNT+Net? I've read the docs, and have the files. I just don't understand how to set up the supporting files like rc.net and host.conf, etc., or how to use route or slattach.

I have slip.xif and socket.xdd in my MultiTOS folder, and they work fine. I just don't know how to make the connection to the serial port. The program 'chat' seems easy to use, so connecting to my provider should not be a problem. I guess also I need 'syslog' to run many programs, so I'm off to get that now. Any help would be greatly appreciated!

> suggestions?

Should be able to plug another SCSI drive in.

You'd be better off going for a slightly older drive than something ultra
modern. Older drives have 'parity disable' jumpers which you need. The
other thing to watch is that the drive must be able to supply termination
power (TERMPWR). AFAIK the GE-Soft adaptor doesn't - so the drive must do
it for itself.

:-)

It's a recursive acronym: GNU's Not UNIX. The idea is to make freely available UNIX-compatible software.

emacs happens to be *very* powerful! You can adjust it to a particular environment, like for C coding, make it automatically indent or whatever, and for my microprocessor design classes using Cadence Design Framework II it's the default editor for messing around with VHDL. It links in with Cadence, so when you edit your VHDL, you can make it do a save and check in conjunction with DFW2.

Not for the beginner though (emacs)...

Sounds like 'Atari Logo' or 'ST Logo' as it was apparently renamed. Its commercial (though I doubt anybody much cares anymore) and was shipped with many STs (in the UK at least) in 1986. Not sure if it was ever sold seperatly.

>
> Anybody got a clue about this?

Parking utilites may just try to dump the heads down on a unused track.
Some just picked a random track apparantly.

Modern drives however may actually lock the heads away from the platters.
Therefore if you use a parking program which just dumps the heads on a
track you might be worse off.

At least this is my understanding of the situation. However AFAICS - as
long as the parking program doesn't do any damage itself - then the drive
will autopark normally (and correctly) when powered down.

:-)

>
>Sorry if it's a dumb question but I'v never come across this extension

>before...

a MSA or Magic Shadow Archiver is a compressed disk which will format the disk out to match the orginal disk from which it came. Many demo's are done this way. Check the FTP Atari areas for MSA213 I think is the latest version. Be sure the disk you restore it to is empty and contains nothing you want to save.. Good Luck Mike

3935. Spectre GCR and TT! HELP

Newsgroup: comp.sys.atari.st
Date: 1996-02-24 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4glv1b$3dc@madeline.INS.CWRU.Edu>
Source record: 149888

Does anyone out there have experience with using a Spectre GCR
with a TT? I understand that there is a modification that
must be made to the GCR to use it with a TT. Does ANYONE
know what that mod is, and have specs for it? Is the mod only to make□□
make□ GCR work with the 1.44 M disks? If one has a 720 DSDD
external drive does it work without the mods?
I would appreciate any help. Small isn't answering his
e-mail lately.

d>
d> It's import modules are a bit buggy though :-(

I'd agree it was certainly in the running, but it only became usable around the time it stopped being supported - its previous reputation put me off for a long time.

However, Speedo etc have arrived and I'd like to use it. Papyrus seems to be a fine document processor, but everyone I know who uses it seems to want to make it do the work of a DTP program, which it isn't and it doesn't claim to be...

So far as I know there is only one type. I've talked to Jim Collins about it, and he's trying to get ahold of Gizmo himself, Chris Richards, concerning the problem. I don't know if there are different models of Mega keyboards, but mine's got a 16-pin flag connection, whereas the Gizmo has a 8x2 connection. Same number of pins, different configuration. It has all the other connections, though; serial, ST mouse, joystick and PC keyboard plugs.

```
: >

```

Hmm. That's entirely possible; it's only a 50w power supply. Shouldn't be too difficult to replace it with a more powerful one, though it'd require some rewiring and, most likely, somewhere to park the new power supply which probably won't fit in the Mega's case.

j> you think is "the best"?

Both programs are giving the correct info, so are probably as good as each other (but not knowing which programs you are talking about or what the other options they offer are it is pretty hard to draw a firm conclusion!!). 1.02 is the recognised correct method of displaying the TOS version though.. :|

If you want to get a really good sysinfo program then FTP Profile, by Mark Baines. It has more options than any other, goes into furthur detail then any other.. yet is still easy to use :)

> d> I'm a bit hurt that noone has mentioned MGIFv5 yet. ;-)
>
>I havn't tried V5... but I have tried V4. Wasn't V4 mono only though? :|

Yes, all versions before 4.3beta were greyscale only. v4.2 could display
in Falcon TC and the others only on monochrome monitors.

MGIFv5 is very good at colour, though.

> d> If you want to play around with image processing, there's a lot of
> d> that in MGIF. Most of it pretty fast.
>
>Great, I will look out for version 5..... is it out yet? It isn't at Hensa
>AFAICS. :(

Version 5.00 was released just before Christmas, and I've seen it on
at least some of the German sites and on atari.archive.
The latest versions are always available on my WWW/ftp site, see .sig.

An updated version with DSP based convolution and median filters will be
released shortly (maybe even today). The speedup of those operations on
a Falcon030 is about ten and five times, respectively.
A 3x3 convolution on a 640x480x8bit image takes around _one_ second!

>Is your program GEM or TOS based...?

Since v4.3beta, MGIF is now both!
The old text interface is still there for people who aren't using GEM, but
almost nothing has been done to it since v4.2.
The GEM interface uses menus and dialogs, but images are still displayed
full-screen. A lot of things can only be done from the GUI.

3948. FS: Complete TT system

Newsgroup: comp.sys.atari.st
Date: 1996-02-24 00:00:00 UTC
From: smiller@farad.elee.calpoly.edu
Message-ID: <4gm018$j2m@isnews.csc.calpoly.edu>
Source record: 149901

I have a complete TT system for sale, and this is what it includes:

(1) TT030 w/megs ram and no harddrive
(1) PTC 1426 color 14" monitor 640X480 at 16 colors max resolution
(1) SLM 605 printer, perfect condition... prints very light probably needs either toner or a drum

I will put in the Geneva 1.0/Neodesk 3.04 combo, UIS 3, Xboot 3, Diamond Edge, Diamond Back 2, Le Redacteur (works great in ST HI) 3.15 as a software incentive.

I want $750 for all of it + 1/2 shipping

Please do not reply if you want to buy it for $200 or something because it would be pointless.

At Toad the prices would be $1199 for the TT 2meg/no hardrive
~$150 for the PTC1426
~$900 for the SLM605

$2259 Total not including the software

You would probably need to get a 2 meg ram card at least for my system so add $199 and for the drum it's $129 at Toad, only $29 for the toner. So a maximum of $1078 for the whole shebang!
This is a good deal whether you want to believe it or not. You are not restricted by having a 2meg ST ram card in it, you could put an 8meg one instead. The system runs perfect, it is a Revision G or better mother board and the hardrive case has a factory modification for easy mounting of half height drives.

If you buy it I will give you a 1040ST with your choice of a color or monochrome monitor.

Reply if you want it. I am firm on the price.
Or give me a call at (805)489-4967... I won't be home this weekend.

3949. Magic4/Falcon and Outside

Newsgroup: comp.sys.atari.st
Date: 1996-02-24 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <825160788_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 149902

Help!

Has anyone managed to get Magic4 running on a Falcon with Outside 3.20?

Magic's manual says it should work, but it doesn't!

It either crashes or hangs on boot-up depending if i put magxbo32.prg before
or after outside in the auto folder!

What order should they be in? Do I need a later version of Outside?
I've heard a rumour there's a 3.30 version. Is it true and do I need it?

Thanks for any help.

Gary.

The TT's Modem 2 port WILL support 153600. Serial 2 only goes to 115200.

(According to the TT I have in front of me right now)

> : Instead it refers you to a Magic developers guide , not supplied , where
> : can this be obtained from ??
> From ftp.cs.tu-berlin.de
> But, so far, only in German, of course.

Okay , will see how my German is progressing since I last tried :-) Thanks.

Is there an "official" attempt to translate in progress ??

Also is there already work being done of drivers (minixfs,serial devices,cdrom,tape etc) and/or a mailing list ??

As an GEM application platform as expected Magic walks away with ALL the awards but I have grown so used to the "added value" of MiNT I am feeeling a bit lost without all this.

Regards

I have two ST computers for sale
one is the "F" model, and the other is the "FM", compatible with TV
I also have one monochrome monitor, two mice, one trackball, etc.
and an Epson FX-85 printer

I have MIDI software - Steinberg's PRO 24 multitrack sequencing program,
MASTERSCORE music scoring program, and assorted personal business
software and games

I also have some recording equipment that works well with the ST
A Tascam 244 Portastudio 4-track cassette deck
A Midiman Syncman Plus SMPTE/Syncbox which makes the tape deck run
in sync with the computer
A Proteus 1 synth module, and some other stuff

E-mail me for more info, or to make an offer on all or part.

Message-ID: <4gosc5$ijr@ra.isisnet.com>
Source record: 149813

John Gray <ag352@ccn.cs.dal.ca> here, in Canada:
Before Calamus 1.09N I did graphics by hand, and paid old guys in downtown Toronto for photo-typesetting and time on their giant PMT cameras. 1.09n was a complete revolution for me. Since then Nathan Potechin's office has sold me an upgrade to Calamus SL. I still gravitate to 1.09N, however, because it uses less memory, crashes out less often, and prints to an old Canon bubblejet in 1/4 the time that SL does. Obviously SL has a whack of powerful features, but I want to have 'em both for my operation. I hope to get the bridge module so I can convert entire pages to EPS files, then I can get 600 dpi output at Kinko's or Presentations Plus directly from a floppy.

I can honestly say that hardly a single day goes by when I don't use Calamus at least once.

Michael Guse (gooseman@locke.on-luebeck.de) wrote:
: Hello,

: some days have gone and here is the next version of my ftp client.
: It is available on my home-ftp-server ftp.on-luebeck.de
: in the path /pub/systems/atari/internet/stik/ftp. The archive is
: named "mgftp101.lzh"

: There many changes made, so hopefully more people can use it :-)

It seems to work a lot better now, though an English resource file would
be nice. (I translated it mysef with Interface for my own use, though)

Problem, though: If I cllick on a file and then click on GET, it gets the
wrong file -- in fact, it won't get anything but the first file in the
list. Plus, the scroll bar doesn't work right - if I'm in a directory
with ots of files it gets down part way, but won't go any further; once
the scroll bar hits the bottom, that's it. (go to ftp.netnet.net in
/pub/aminet/mods/demo and you'll see what I mean)

And on a semantics note, the RSC looks pretty bad in medium res; a lot of
text overlaps in some diaog boxes. I could fix it up with Interface for
my own use, but...

: BTW: If somebody want to maintain a mirror of this software, please
: email me.

: Bye,
: Michael Guse

3961. Re: SM124

Newsgroup: comp.sys.atari.st
Date: 1996-02-25 00:00:00 UTC
From: john.blackwell@aspects.com
Message-ID: <9602250712133203@aspects.com>
Source record: 149816

Dear ALL,

thanks for the replies on the subject of wonky SM124s, and especially to Ron who forwarded this remarkably to the point article, reproduced below. Personaly I've only got as far as taking the cover off of mine, but I suspect that the following fix (when I get some time, hopefully in about a fortnight) is going to do the trick for me, and sounds like a very promising idea for any other people with a similar problem.

Read on McDuff:-

****

MONOCHROME MONITOR FIX
Randy Constan, Elfin Magic Co.
--

If you have an ATARI SM124 Mono monitor that has recently gone belly up, read on. In particular, this pertains to those of you who have tweaked the coils and trim pots in your monitor to get a full raster display, although it's quite possible that unmodified monitors have been affected as well. Also, if do have a modified monitor that's behaving fine, you still may want to consider the suggestions described in this article, as it could save you a surprise monitor failure that (you _KNOW_) will definitely happen at the worst possible time.

Finally, this text describes a problem particular to the monitor manufactured by "Gold Star Co", which has the Brightness, Contrast, and Off/On Volume controls recessed on the right side-panel. There may have been other manufacturers of SM-124's with completely different electronics, so if ANY of the physical component layout descriptions written here do not seem to jive, then all bets are off and the information given here may or may not have any practical value. In addition, the monitor 'fix' I'm going to describe should only be done by a trained electronic technician, or at the very least a knowledgable electronics hacker with good soldering AND de-soldering skills!

Disclaimer: You can easily get knocked squarely on your butt by the voltages present in your monitor. Weather or not it kills you probably depends on just what you fall on, your present health, and where the resulting flying monitor lands.

In any case, your decision to implement the changes described herein is completely your own. I disclaim all responsibility for your health, safety, or any damage to equipment or property caused by fires, implosions or explosions, earthquakes, global flooding, or galactic

imbalance resulting from your use of any information in this writing. I think that about covers it ;)

So... once upon a time, we all got our nifty HI-RES mono monitors, powered them up, and the very first thing we all said was, "Ah.. MAN!!... This monitor is screwed up". Perhaps stronger language was used, but the fact was that we all thought something had to be wrong. Alas though, the tiny picture on that screen was exactly what the ATARI mystics had intended! Of course, it wasn't long before many daring hackers boldly removed the monitor's covers, cast their warrantees aside, and discovered a way to expand the tiny picture to full size. The information spread quickly through the worldwide internets, spider-nets, and fish nets, and soon all mere mortals had full screen displays and could actually read that 6 X 6 font! And so, the all lived happily ever after. But then one day years later, a curse fell upon the land, and darkness fell upon the faces of many of these monitors.

Ok, enough with the story narrative. By now, you're beginning to get the picture (no pun intended). The modification to fill the screen does indeed place an additional stress on a portion of the monitors circuitry, which coupled with a design error quite common to many types of computer monitors, ultimately caused the failure. The good news is that I've now seen quite a few monitors with this identical failure which is 100% repairable, and should leave you with 'good as new' results. The bad news is that you do need some technical skills, but even if you don't, finding a techie friend to help will be abundantly easier having a possible procedure for repair.

Brief technical summary. Right near the coil you adjusted to spread the horizontal width of your display, there's a 2.2 uF capacitor. More specifically, it is a non-polarized electrolytic capacitor, which is actually 2 polarized capacitors wired 'back to back' in a single enclosure. As the screen is widened, the peak voltage level across this part increases, thereby causing more internal stress. This situation is further aggravated by the type of part as well. All capacitor types have certain advantages and disadvantages and when it comes to electrolytic types, the advantage is smaller size. It's disadvantage however is that at higher frequencies, it has high 'leakage' current and acts more like a resistor. The Horizontal frequency passing through this capacitor is in fact quite high, and the resistive qualities at these frequencies cause the capacitors to generate significant heat. Over time, that heat will cause the part to fail even in un-modified monitors, but the modification certainly speeds up the process.

If your monitor has fallen victim to this failure, in a way your lucky. There's a fair chance that the problem (as said earlier) would happen one way or another anyway, and at least now you have a possible fix. First, you need to disconnect the monitor and open it up. If you have the chassis I'm describing there will be two screws on the upper sides, visable from the back; two more screws on the bottom; and a single screw on the back above the power plug, which is a removable 'spade' type AC

connector. After removing the screws, you can remove the back cover, but be sure to be careful of the speaker connections. The speaker is mounted to the inside of the cover, and connects to the monitor's main PC board via a small removable plug. It's a bit tough to get to, but trust me, it IS removable.

Once the cover is free, there are 2 fuses to check first. From now on, all references to right and left will assume you are behind the monitor, with the screen pointing away from you. There is a small PC board mounted vertically on the right side of the chassis which contains a 0.75 amp fuse. There's also a 2 amp fuse immediately to the right of the speaker plug you removed on the main board. Check both fuses with a DVM or other suitable instrument. Most likely, you'll find that it's the 2 amp on that is gone, but either one blown is possible. You can buy these tiny fuses at Radio Shack, and while your there, you can pick up a much more modern replacement for the capacitor we mentioned earlier. There's also a resistor that often cooks when this failure occurs, so you might as well get all this stuff at once. If the problem turns out to be something else, at least you'll be prepared for the eventuality. In any case, read on to do a 'walk through' before buying, to make absolutely sure your chassis physically matches the one we're discussing.

At your local Radio Shack, pick up the following items:

fuse (pkg of 4) 3/4 amp 270-1048
fuse (pkg of 4) 2.0 amp 270-1052
fuse (pkg of 4) 5.0 amp* 270-1056
capacitor buy 2! 1 uF, 200v metal 272-1055
resistor (pkg of 2) 680 ohm, 1/2 watt 271-021

* optional purchase, see text.

Since we have plenty of extra fuses now, start by just changing them, and setting up the monitor (still uncovered) with your ST. If the display comes up normally, leave everything powered up and wait a few hours. If all goes well, you can either make the fix were going to describe anyway to save future grief, or put the other parts away, along with this text, in case the problem returns.

Assuming the problem did not go away (no display and/or fuse blown again), there are two paths you can take from here. You _can_ just go ahead and change the suspected components without really knowing if they are at fault, since they'll probably need replacement eventually anyhow. The other possibility is that you don't want to to this until you're a bit more sure it's necessary. If that's the case, read the next few paragraphs. Otherwise, just skip over to "Making the Repair".

If you do want to do some checking, here is a possible (but not foolproof) procedure to see if the suspected capacitor is indeed the culprit. If the 0.75 amp fuse on the vertical board was blown, temporarily replace it with a 2 amp. If the 2 amp fuse on the main

board has blown, temporarily replace it with one of the 5 amp fuses. Set up the monitor, still open, near your ATARI, and connect the monitor cable to your machine. Boot the ATARI with the monitor still off. We want to keep our 'powered up' time with the larger (wrong) fuses to a minimum. Now, hook up the power cord and turn on the monitor, being ready to instantly kill power at the first sign of any unsafe condition such as smoke or electrical arcing.

With the higher current fuses installed, the display will probably still be out, but the green pilot light on the front panel _should_ light. If it doesn't, then either the new fuses have blown, or a problem exists somewhere else in the circuit. Of course, the pilot light could just be shot, but if the higher current fuses do actually blow, then forget about the remainder of this discussion and just try implementing the suggested repair. Also, if the screen display _does_ appear with the larger fuses, don't be to happy yet! Twice now I've seen the 'crippled' capacitor seem to work fine for awhile before the final breakdown. So weather the screen display comes up or not, proceed to the next step as long as the fuses are not blowing.

Locate Capacitor C714. It will be the round cylinder on the left side of the main board (from the back), in-between the coil you adjusted when you increased the width and the flyback transformer. The coil is the only adjustable coil on the board, so you can't miss it, and hopefully you know that the flyback transformer is the thing-y with the wire that goes into the top of the picture tube! Locate the capacitor... but don't touch it yet! The flyback puts out thousands of volts, and if there is a flaw in it's insulation, it could arc right into you hand. Just leave the unit powered up for a few minutes, and then turn it off. Now, with your finger, move close to, and finally touch the capacitor from the top. What you're looking for is a _HOT_ part, so be careful! If in fact the part is really hot, it probably has shorted and needs to be replaced.

Also, immediately to the right of the coil, also on the main board is a diode (D-709) and a resistor (R-221). Take a good look at the resistor to see if it looks stressed or burnt. If you want, you can do an in-circuit check with a DVM to see if it has opened. You can make this measurement from the bottom of the board if you want since it's pretty cramped on top. Even if it has not died, you should consider replacement if it appears stressed, or the underside of the board appears burned and discolored at the location of the resistor.

Making the Repair

Making the repair is simply a matter of changing the parts, BUT... there's some special considerations here. You may or may not be aware that radio shack does have 2.2uF, 50 volt non-polarized electrolytic capacitor in stock! But using that part would be dumb since the conditions that caused it to die in the first place have not changed AND, the part was a poor design choice to begin with! We're going to use the two 1.0 uF metalized film capacitors which are NOT electrolytic,

AND have a working voltage 4 times that of the original part! We will have to parallel both capacitors to get 2.0uF, which is reasonably close to 2.2 and in fact works just fine. First though, you'll have to de-solder the existing C-714, which will probably be a bit of a chore. Do that, and also get rid of the existing R-221 if it shows the signs of heat stress (or is open) as we discussed earlier. You can just cut it out if you want, since we'll be soldering the new parts to the underside of the board.

Now, take the two 1.0uF capacitors, and solder them together in a neat parallel arrangement, that has a pair of leads bent to accommodate the spacing of the leads on the original capacitor. Look at the underside of the board and observe the original C-714 solder pads, as well as the clearance to the bottom when the cover is replaced. Give it a little thought and come up with a mechanically sound and visually sensible combination. The capacitors again, are not polarized so direction does not matter. And remember... parallel, NOT series!!! Solder the parallel combination to the C-714 pads under the board. Try to push the leads right into the holes left by the removal of the old capacitor.

R-221 should also be replaced from the bottom side of the board unless you're really patient, and have some small tools. It's much easier to just trim the leads and tack solder it in place under the board. If the board looks a bit burned in this area, you may want to clean it up a bit prior to installing the new resistor.

Finally, don't forget to put the proper fuse values back into BOTH locations. The original fuse values are important protection and do not normally blow unless there is a real problem. I definitely do not recommend leaving the larger fuses values in place. Do a bench check on the ST again, still with the cover off. You may need to re-adjust the horizontal width, or the position tabs on the neck of the picture tube to center and set up the display. Once this is done, you can put the cover back on, and you're back in business. If the fix does NOT help, just double check your soldering and connections to make sure you didn't wire something wrong.

Hope this fix was helpful. If so, I'd like you to drop me an EMAIL, since I'm curious as to just how many fried monitors out there had this problem. Also, if you're not able to make the repairs yourself and live anywhere in Islip, Long Island, NY area, send me E.Mail and maybe I can help you out. My GE mail address is R.CONSTAN, or Internet: rconstan@maestro.com.

3962. cubase audio hates warp9

Newsgroup: comp.sys.atari.st
Date: 1996-02-25 00:00:00 UTC
From: musicman@pixi.com
Message-ID: <4gpde8$j17@rigel.pixi.com>
Source record: 149817

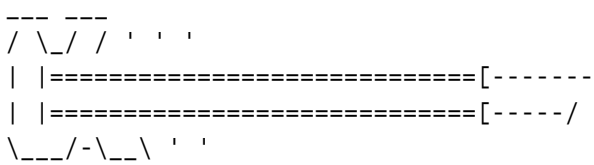
Falcon users beware....if you use Cubase Audio...it will give you
problems if you run it with Warp9.

Through process of elimination I found that it was the problem child.
Then again..Warp9 has given me some problems with some other good programs.

Again this is as far as I know...for Falcon users only. Have not tried
or confirmed for 1040, TT, 520 use yet.

Aloha from Hawaii!

Vern *8^)



Hear it, Feel it, See where it's going....

and Play it with soul!

3963. XBOOT quirk?

Newsgroup: comp.sys.atari.st
Date: 1996-02-25 00:00:00 UTC
From: musicman@pixi.com
Message-ID: <4gpdm7$j17@rigel.pixi.com>
Source record: 149818

I've been using XBOOT for quite some time...version just prior to
the new one.

I was using it on a 1040STF for quite some time with no incident.
But then I got a Falcon 030...took my back up files from my 1040STF
and uploaded it onto the Falcon.

Upon bootup....I was stuck from going further...because it asked me
for a 'password' that I hadn't assigned ever. I know because I hate the
use of a password especially when I cannot remember it down the line.

So 'stuck' I was. Luckily I had the HD/boot up driver on floppy so I
could get around it and dump the XBOOT File if not I wouldn't be able to
get by the password! Terrible.....

Can anybody explain why this happened and if it just a Falcon related
problem during bootup?

Any help appreciated!

Aloha from Hawaii!

From: "Terrence R. Redding" <pba-cct@flinet.com>
Message-ID: <313088AC.3B71@flinet.com>
Source record: 149827

I notice Toad computers is selling the HP 855C in the Atari section of their homepage and indicates it is compatible with the Atari and that print drivers are available for PageStream and other programs.

I have the HP 855C at work hooked to my 6100/60av and am considering taking the 1040STe to work in order to use BStat for some statistical analysis.

I went looking for the print driver from HP, but found no mention of Atari in the HP area.

Could some one please tell me what I will need to use the HP 855C with the 1040STe? I only need to be able to print ASCII or to the FX print emulator. But having HP II emulation for graphical output would also be nice.

All help appreciated. If you post to the news group, would you please consider also posting cc: to pba-cct@flinet.com? Thanks

Regards, Terry

I THINK it is some kind of 'Reject', vendor unique. The best way to
resolve it is to go to "www.toad.com" and to their Support section. You can
EMail your question to them and they will EMail you an answer, if possible.

Atari Corp. and JTS Corp. have merged - that's all.

The new corp. will be called JTS Corp., but the Atari label will still be
used on the Jag AFIAK.

JTS produces and develops disk medias.

Keep Cool and Flying...

>
> So, I was wondering if there are any flicker fix programs
>out in PD at all?
>
Sorry but no. The way the screen increases the resolution is by using
interlacing, this is a method by which the computer only draws half
the screen at each swip, ie. it displays every other line one frame,
then all the others the next. This has the effect of causing
horizontal lines to flicker, ie. on the desktop and in GEM programs,
however if you display a picture ie. a GIF or JPEG then you'll notice
the flicker much less, because there are very few horizontal lines.

So as a result of interlacing you get flicker, if you got rid of the
flicker then you wouldn't have interlacing, and so no higer res.

Your best bet is to buy a monitor (if you are using a falcon, and
SVGA monitor) which can display the resolution without the flicker !

Hope this clarifys

ATB.

hi SAM (the software that comes with the falcon do it very well)
and there is no restriction.

3979. Need HELP checking FTP sites (for the FTP list)

Newsgroup: comp.sys.atari.st
Date: 1996-02-25 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3130733a7815011@sn.no>
Source record: 149834

Well, the FTP list is soon coming out again- I've been working like crazy
on it for some time now, checking out all the existing sites and adding new
ones. It's taken quite a lot of online time, but most of them have been
checked now.

But there are still a few left- they seem to be busy just about all the
time, and I can't afford to be online for hours just to try to get in.
So, could someone reading this please check a few sites for me?
(I know a lot of people here have free, unlimited access).
The sooner I get the last few sites checked the sooner the list will be
completed and posted here.

So, the sites that I haven't been able to check out are the following:

ftp.uni-frankfurt.de /pub/Atari/
atari.archive.umich.edu /atari/
---
check if the directories are correct.
For uni-Frankfurt, check if it's a normal site or a small, specialized
site (if possible, do a 'ls-l' or 'dir' of the atari directory and mail it
to me so I can have a look).

wuarchive.wustl.edu ????????
mirror.archive.umich.edu ?????

Are these sites still mirrors to atari.archive.umich.edu? If so, what are
their correct paths?

closer.brisnet.org.au /pub/archive1/ATARIST/

This site has obviously closed down it's Atari section, but in a small
readme file within the site it said that the Atari stuff was available at a
site with an IP address: 203.4.149.98
I haven't been able to reach it- can someone have a look into this and see
if they have an Atari directory? I'd also like a directory listing here as
well.

Thanks!

Hallvard

No, it's not what I mean- I need a program that *converts* Truetype fonts
into .FNT (or even Signum, HP or Calamus formats as I can re-convert them
into .FNT with Fontkit 4).
I'm not looking for a program to display Truetype fonts.
(maybe later though).

Which port are you using? If it's simply AUX:, then all you need do
is put DRVIN.PRG and MFP.PRG into your Auto folder (in that order).
If you're using Serial 2, you need DRVIN.PRG and SCC.PRG; the defaults
work fine in both cases. HSmodem _is_ the patch program. If you're
using the Modem CPX, however, it may disable the patches; I would
advise against it if you can manage without it.

On a.a.u.e. in the Programming/Gfa section there are lots of GFA source
files. I know that at least a few of them deal with using resource files.

>Content-Transfer-Encoding: base64
>Content-Disposition: attachment; filename="TOADTALK.DOC"

[snip]

Prepare for flame ...

1) I can't decode it (corrupted)
2) This is not a binary group
3) From the little I could decode it appears you have posted some
or all of the word processor as well which may or may not be
commercial depending on its version.
4) You did it twice.

Please think a little more in future!

.. flame off

The .DOC files are the word processor text files. These are what you
need to convert. If you are after a PC program to do the converting

then I can't help. If you want an ST program to produce RTF try
Marcel.

Does anybody know what the deal is with this FireSTorm Web Browser I just d/l'ed from ftp.uni-kl.de? (GEM_WEB.LZH) It has a date of July 95, but I've never heard of it before. I couldn't get it to work, but it's supposed to be an online browser, and I saw PPP mentioned, so maybe it works with that protocol!! (unlike STik) :-(

Has anybody gotten it to work? Is the author still working on it??

Inquiring minds want to know!

Noting's that simple is it :-(

You could investigate the hardware side about which I have no idea -
there might be an interrupt you could mess with or intercept one of
the LineA/F traps - maybe the FPU has a CS line you could fit a switch
to? Pure uneducated speculation!

At 15:15:53 on 18 Feb 96, apb25@thor.cam.ac.uk wrote this about CBHD.

a> First of all, thanks to Claus for the program!

Yes indeed.

a> After about half an hour of messing around with boot disks, here is
a> a short explanation of how to install it (I have an STe with ICD Link
a> II):

Horaay! I've got an STe with a unknown adaptor (BDBP Electronics) and AHDI.

a> Copy CBHD.PRG to C:\CBHD.SYS.
a> Run CBHDCONF.PRG and "laden.."(right hand menu)
a> select C:\CBHD.SYS
a> Select "install...." (right hand menu)
a> A list comes up (with four names on mine). Select the first one
a> Reset!

Tried this and got the following:

"Kein SCSI-Treiber installiert
Bitte SCSIDRV.PRG starten
Abbruch"

I ran the program SCSIDRV.PRG as told and then rtepeated your instructions.
All seems ok now. I'll test and see. :)

I would put 4MB on the Wizztronics board, and 10 on the FX.

>2. Is there an advantage of the FX ram expansion over conventional Ram
> expansions?

Yes, programs run in faster fastRAM than in ST RAM, a utility is
included with the FX to set the TTRAM flag which enables this.

>3. Are there any undocumented hints or tips that might assist in getting

"G> > I plug another SCSI hard drive into the progate? (would be nice...
"G> > can the ST handle 500MB+ drives?!) Or does anyone have any
"G> > suggestions?

I have what sounds like an identical Protar Progate 40, which though
it's still working ok, physically crashes (you can hear it scrunch!)
if you switch if off too soon after switching it on! Lost a very few
sectors that way, though it's 97% ok.

"G> Should be able to plug another SCSI drive in.

I tried a Quantum Lightening 560 mechanism in it, which it flatly
refused to recognise, no matter what I did with the parity or ID
jumpers. The conclusion that I came to was that the SCSI ASCI board
was incapable of working with a modern SCSI mechanism, though if you
could get your hands on the old Seagate mechanism that normally lives
inside 'em it should be ok.

"G> You'd be better off going for a slightly older drive than something ultra
"G> modern. Older drives have 'parity disable' jumpers which you need. The
"G> other thing to watch is that the drive must be able to supply termination
"G> power (TERMPWR). AFAIK the GE-Soft adaptor doesn't - so the drive must do
"G> it for itself.

In my experience a dodgy business trying to get the Protar to work
with anything else. :(

I ended up buying a Gasteiner 360 (Quantum Lightening mechanism) and
external host adaptor, which (apart from the bloody noisy fan) works
fine with my Tos 1.2

Good luck!

This is fun. I have to disillusion you, Chris. Here in Pommyland (the UK for non-English readers) we use 'tickety boo' as well. I have a e-mail friend in Australia who sent me some of his software. I e-mailed him and said 'I haven't tried it in anger yet...'. He replied rather concerned and asked what was wrong. Nothing was wrong. That is a phrase we use to say we haven't tried something seriously.

Anyone got an Antipodian dictionary?

With such an easy setup, you get an advantage of 20%, not more. With a cache
added, you will get 80%.

>Also could an 8 MHz cpu handle 16 Mhz with a heat sink or would I have to get
>a faster CPU

The latter.

HEY IDIOT !!! Do you realize you just sent a 222 Kbyte File to this
newsgroup ? As if that isn't enough, you also sent it *twice* !
What the $%^$%%%)%^&%*&%&(^&*%^$%&*() is wrong with you ?

Have you ever thought about the fact that all people reading your post
with offline-readers _involuntarily_ have downloaded your post ?
Taking a rough guess, you must have generated a traffic of (at the very
least) 2.2 Gigabyte ! It took me 4.5 minutes at cheap rate to download
your post. That's about $0.10 and if I again assume that there are at
least 5000 other readers here your post cost us $500 collectively.
Thanks a lot, dumb*ss !

I suggest you go read some FAQs first before you return here again.

Aha. my error.

I read somewhere about some patents from 1980 which were now "free", and
the number 4000000 occurred in that paragraph or the next one.

So I guess that they sort of became equated ("1980=#4000000").

Thankyou for correcting me.

4009. Need HELP with StoneX/TOS image

Newsgroup: comp.sys.atari.st
Date: 1996-02-26 00:00:00 UTC
From: miranova@biggulp.callamer.com
Message-ID: <4grnfe$dhd@twizzler.callamer.com>
Source record: 149664

I'm trying to get Stonx 0.6.5 running on my Pentium 133. It seems to be crashing soon after I run it... the last thing displayed in my xterm window is 'initializing A-Line' or something like that. The Stonex window remains blank. Either something is wrong with my compilation of the source, or my TOS image is messed up. I suspect the latter. I wrote a program myself to dump TOS from my atari (because dumptos and winx22 wouldn't work), and the program crashed (I got an exception error) when it was almost finished dumping. I guess I was reading too far than was allowed without being in supervisor mode. Anyways, the file I got is 196,608 bytes long. I don't know what version of TOS it is, but it starts at 0xfc0000, and should be 192K long, I think. When I ran the Stonx makefile, it reported that I had a 192K TOS image, and I think it managed to extract some fonts from the TOS image. Does the makefile run a checksum on the TOS image or anything? Does anyone know how many bytes exactly my TOS dump file should be, and how to tell what version of TOS I have? Is there something else I should check about my setup? I've already checked my GCC version and my X libraries versions.

One other thing. When I compiled the Stonx sources, I got an error when compiling audio.c at line 500. I had to comment a few lines out to get it to compile. I ran stonx with -noaudio in case this proved to be the reason that stonx would run, but it didn't make any difference.

Thanks in advance for any help you can give me. Please reply to:

I'm sorry, but the STFM demo-scene is practically dead.

Demos are only made for the Falcon (and sometimes STE) today.

The latest demo I've seen for the ST, was from 1992.

Anyway, try 'ftp.uni-kl.de' under /pub/atari/demos/

: "Kein SCSI-Treiber installiert
: Bitte SCSIDRV.PRG starten
: Abbruch"

: I ran the program SCSIDRV.PRG as told and then rtepeated your instructions.
: All seems ok now. I'll test and see. :)

This doesn't work for me :-(
I have an old ST with a Megafile 30 where I have put in a second drive.
Only ICD software seems to understand what happened to the Megafile.
I tried HDDRIVER from a friend of mine, it installs two drives, but only
the original drive gets accessed, even when I click on the second drive.
When I startup SCSIDRV.PRG or CBHD.PRG I can't access any drive anymore.
I get 'Your output device is not receiving data' messages on the desktop,
directory windows are empty or they only contain two file icons without
filenames underneath.
Anybody knows what goes wrong?

Pim Borst.

>slattach.

rc.net is simply a shell script, you can put whatever you like in it.
Typically an ifconfig and a route to configure the interfaces. You should
have manpages for them.

host.conf configures the name lookup. It should be something like
order hosts, bind
multi on

resolv.conf also configures name lookup, specifying DNS servers. It
should contain a line for each nameserver, and if you want to be able
to abbreviate local names a search line.

Hi,
If you want all the docs one good thing would be to get a complete mint
installation. don't forget the man files, you'll need them if you want to code.
I personnaly use the "kit unix" that you can find in ftp.cnam.fr in
pub/Atari/Mint/Kit_Unix/...
you install, it works, with minix partitions and so one.But yu must install
Mint net by hand.
For docs on ppp, slip, etc, check for a unix manual, it's roughly the same
thing than MiNT.
Bye!

: work any longer, but previously defined links still are recognized by Ease.
: Is there a way to define links in Ease?

Use

Thing
Gemini
Magxdesk

or any other modern shell.
Ease up to Version 4.0 is an old program that can definitely not support
a modern operating system like MultiTOS or MagiC 3 sufficiently.
Wait for a newer version
of Ease or change
your shell. Now or never. Or go back to MagiC 2.

STOSSER WWW Page
http://www.airtime.co.uk/users/stosser/

This page has now been updated, Some major changes have been made, the <Downloads> section now has its own menu system, from here you can now download all 25 issues of STOSSER Diskzine, all 4 issues of STESTOSterone diskzine, a selection of STOS extensions and a selection of my titles, including H.E.R.O. Multiplayer Pakman and VidIgrid 2, other titles by myself can also be downloaded,
Couple of more people added to the <Bit about> section, please note anyone in this section directing others to there "bit" should use the normal url but change your name to uppercase,
A new section added on the main menu and smaller updates to existing sections, there now totals Seventy Nine (79) seperate pages on this one site,

This will be the last major monthly change now that I have a working ftp client ie: MG-FTP for use with STiK, I now dont have to wait a month, with my STe I can now update the page as often as I wish, and indeed will be doing, so keep your eye on the date when you visit :)

Cheers......!ynoT

The newer versions of WinRec can do that. You could also use an older
version, that is available on the net and use '525' to convert it from
Winrec's DVSM to WAV.

No. Calamus S can still do colour separations, you just can't edit the
settings. AFAIK Calamus S is discontinued, and SL is much cheaper now,
anyway. So you can still use colour drawings/printouts etc with S. SL
also includes extra modules that didn't come with S, like the vector and
speedline modules...

Get a copy of GFA Flydials4.9 (from most places) and use/modify/play with
the routines until you understand what's going on. Or you
can get Facevalue (not avail in the UK yet... :(which aims to hide the
complexity from the programmer...

The easy(?) way is to get the CD distribution. If you have more time than money you can gather things up from the Web/ftp sources. For info on the CD try Toad Computers - 410 544-6943 or 800 448-8623 (order line) email info@toad.net. If you have Web access I have links to the Linux68 page which leads to everything else on the topic and Toad's Web page.

Even with the CD it's a pain to set up but does expand your horizons considerably.

Whatever it is, I don't think it's Falcon related. I've been using X-Boot
on a Falcon and never hit a passoword, though I think I remember
seeing an option for one somewhere.

> added, you will get 80%.

Depends what tool you use to measure the speed increase.

As a rough guide -> running the 68000 @ 16 Mhz (no cache) while the motherboard is still @ 8 Mhz gives a 11% incerase in processing speed.

Some operations are almost twice as fast (ie. multiplys & bit shifts).
Some graphic operation speed up by >20&.

> >Also could an 8 MHz cpu handle 16 Mhz with a heat sink or would I have to get
> >a faster CPU
>

I have double clocked a basic STFM using the original CPU.
I did not use a heatsink, but I did later replace it with a faster version.

Overclocking will probably reduce the life of your CPU, but you may not really care if your ST does not last 20 years :).

There was an article in one of the German ST mags on how to speed up the whole ST motherboard. I don't have the article, maybe somebody knows where we can order back issues.

That type of speedup would give a 50% increase in processing power.

4039. AES 4.1 loadable keyboard tables :)

Newsgroup: comp.sys.atari.st
Date: 1996-02-26 00:00:00 UTC
From: jamesco@cogs.susx.ac.uk
Message-ID: <4gslg7$lec@infa.central.susx.ac.uk>
Source record: 149694

I've been looking at how MultiTOS 4.1 works in some detail under a debugger (mon) and found a text string that looked like 'C:\MULTITOS\KEYBD.TBL'

In the Atari Compendium, there is a little section on a feature of TOS 5 whereby MultiTOS loads in a file of the name above and sets up the keyboard translation tables accordingly.

As far as I can tell, the format of the KEYBD.TBL file is excatcly as it is written in the Atari Compendium, with the exception that it must be called 'KEYBD.TBL'.

Also, the last three tables (alt+unshifted, alt+shifted and alt+caps) are optional: the base minimum file must have the three standard tables - if the file is more than 386 bytes (3*128+2) then it is assumed that the file contains the last three (variable length) tables.

The next point is that the xbios function 'Keytbl' ($10) is used to set all six of the tables - all the OS documentation I have ever seen states that only three tables can be set up...

As of, at the very least, TOS 4.04, Keytbl() returns a structure with 6 pointers in it, and those pointers may be set to be the 6 tables from the KEYBD.TBL file. The structure returned from Keytbl(-1,-1,-1) is:

```
typedef struct
{
char *unshifted /* 128 bytes normal table */
char *shifted /* 128 bytes shifted table */
char *caps /* 128 bytes caps locked table */

/* the next three might be the wrong names (I'm checking this out right now)
however, they appear in the same order as in the KEYBD.TBL file
*/

char *altunshifted /* variable length table alt table */
char *altshifted /* variable length shifted table */
char *altcaps /* variable length caps locked table */
}
```

I am presently confirming the format of the keyboard table from the Atari Compendium, once I have done that I'll send the results.

If this is something that lots of people already know about then why hasn't it been documented??

I would like to know when Keytbl() was upgraded to allow the alt tables. If anyone knows, please mail me. If you want to check if your version of TOS supports it, make a call to Keytbl(-1,-1,-1) and look at the memory at the

returned address.

This is best done with Devpac and Mon. Write a little program that looks like this:

```
move.l #-1,-(a7)
move.l #-1,-(a7)
move.l #-1,-(a7)
move.w #$10,-(a7) Keytbl()
trap #14 xbios
```

Now assemble it and run it under Mon (single step mode). Set the memory window to look at the memory at the address in D0.L

On TOS 4.04, there are 6 pointers there - the last three all point to the same place (a null) and the first three are the normal tables everyone should have.

Thanks for your attention,

Cheers,

James Cox

Help!
I have loaded the X-Chimera version of TAF-Mint, obtained
from HENSA (beta 1.1) It loaded fine, after I figured out what
Mint is really all about. And it works OK in local mode.
Yhe crazy thing apparently only understands PPP, that is if I
understand it right. Which is not all that certain!! After
scouring and devouring their install.txt notes and every
other document inside all the relevant README files, I still
can't figure out how to make the system connect to my SLIP
account. at my Univ. And I thought I was sooo clever after
I got STiK working with no problems. Well, almost none.
I tried figuring out dip, and tried changing the chatfile,
but they are too unintelligible without a clear roadmap.
Can some kind soul out there take me by the hand
and guide me thru the proper steps, and tell me just what
host* files take what manes and numbers???

> <STIRRE31@MAINE.MAINE.EDU> said:-
>>I still cannot get pop mail to work. I looked at
>>my friend's setup in Eudora and he simply had to put in his
>>address for for the pop account. I have my STARTUP.NOS this way:
>>pop mailbox stirre31
>>pop hostname maine.maine.edu 3
>>What else could be messing it up? I'd appreciate any help. Oh,
>>I do have the Pop mail version. FTP and telnet work fine.
>>Should I post my STARTUP.NOS?

I have used OASIS/NOS/POP3 for a few months quite successfully. Below is an
extract from my STARTUP.NOS file

```
# Setup Post Office Protocol parameters
pop userdata tparrett <password>
pop timer 600
pop quiet no
pop mailbox tparrett
pop mailhost [196.23.34.5] 3

# Start the servers
start pop
start smtp
start discard
start finger
start ttylink
# set up the domains
domain startdns
domain addserver [196.23.34.3]
domain addserver [196.23.34.5]
domain addserver [196.11.62.110]
domain suffix fast.co.za
domain cache clean on
domain cache size 100
domain cache wait 300
```

Points to note are that:
1. for the userdata info in my file I put my username(which is the same as my
login) followed by the password(the same as is used at login).
2. for the mailbox I put my username.
3. for the mailhost I find the only way I can get POP to work is to put the IP
address for the mailhost which was given to me by my ISP. If I use the mailhost
domain name given by my ISP (pop.fast co.za) then upon login I get an error
'unknown host'message referring to the mailhost name. It even gves the line in

the STARTUP.NOS file that is causing the problem and a list of valid sub commands !
My ISP is pushing for me to use the domain name instead of the IP address so I'm keen to find a solution. He suggested that perhaps the Domain Name Server was either not working or even that NOS may not support DNS. I looked at the various commands and related sub commands in NOS and discovered that the command 'domain' has a sub command 'startdns'. I then implemented this in my STARTUP.NOS file but it did not seem to achieve anything. The only difference I found was that if I try to implement 'startdns' in direct mode I now see a message that 'DNS is running'.

Does anyone have any ideas on how I can set up my file to use the ISP supplied domain name for POP (the same request goes for SMTP) instead of the IP address ?. Logic says that if NOS can find the IP address of an ftp site when all it is given is the domain name,why cant it find the same for POP3 and SMTP.

4049. Whatever happened to the ATW?

Newsgroup: comp.sys.atari.st
Date: 1996-02-26 00:00:00 UTC
From: josteinw@oslonett.no
Message-ID: <josteinw-2602961901550001@hsund2-ppp1.oslo.net>
Source record: 149704

Whatever happened to the Atari Transputer Workstation (ATW)?

Does anybody know where I can get info on this fine piece of Atari equipment? I know all the tech specs and that stuff, but I have absolutely no idea where to turn to actually get my hands on one of these buggers. Any ideas?

If any of you nice people out there should happen to have an ATW for sale, just name the price and I'll... er... think about it, actually. I don't have *that* much money.

This message from jhovila@muikku.jmp.fi to All came in on a wing and a prayer...

Hello Jyri!

j> Just downloaded a huge packet of GDOS fonts. The problem is, that I`ve
j> got SLM 804 and the printer fonts in the packet are for Epson. Should I
j> get a conversion program somewhere of jump off the window?
The best program for converting GDOS fonts (IMHO) is Fontkit (available in the UK from the ST Club at 24.95 UKP)

You will find that you will have a lot of work to do to tidy the fonts up, because you will find that the conversion process will leave jagged edges, especially if you are trying to scale 9 pin printer fonts!

Fontkit will also convert to GDOS format fonts from other sources such as Calamus and Signum.

I'd say that you would be better off getting "proper" 300*300 dpi fonts as this will save you time in the long run! (The ST Club has sets of such font

ST Club is on (UK STD code shown in full) 0115 945 5250.

Speak to 'ya later!

Source record: 149711

Hi everyone,
Thanks to the kind folks at CNAM in France, the patch file to upgrade
ExtenDOS Pro from v2.1 to v2.3A is _finally_ available via FTP at
ftp.cnam.fr. The full address is (probably):
ftp.cnam.fr/pub/Atari/Atari/CD-rom/Drivers/epro_23a.zip

The same directory also has the v2.0 to v2.1 upgrade patch should anyone
need that.

Many thanks to Ludovic Rousseau at CNAM!

Roger Burrows / Anodyne Software

From: stosser@neon
Message-ID: <4gt561$ng7@neon.airtime.co.uk>
Source record: 149714

This is probably a dumb question, but it has been a long day:)

My son writes a file on the ST, saves as ASCII, we presume he can then load it into the PC at school and print it out, but him being only 11 yrs old, the school have locked any options and the pooter only loads wri files, this is for safety reasons i presume,
The disk is NOT a problem Kobold does that nicely :)

Heres the daft question, he cant load the ascii file, can I somehow make it into a wri file without having to buy software that would cost more than a printer ?

Hope I havent made a plank of myself again :)

Cheers........!ynoT

4060. Parts from MegaFile 30 for sale

Newsgroup: comp.sys.atari.st

I've never heard of this happening before. It sounds like the config file was
damaged somehow, and this confused XBoot into thinking you needed to
supply a password. Probably just deleting the config file would be enough
to fix the problem.

Hi All,

I just suffered a great loss to my system integrity. My Mono monitor
just gave up the ghost and all I see on the screen is a faint white line
at the center that goes about 2/3 of the way across. I really miss it.
I'm back to using the color monitor but it's not the same. I live in
San Francisco. I need another mono monitor or to get this one fixed if
it's not too expensive. Can any one in the area help me out. Thanks in
advance. Please E-mail me if you have a mono monitor you are willing to
let go cheap or if you might know how to getr this one back to working again.

Thanks,

Jim Cochran, gripman@netcom.com

>I only want network drivers to run ppp, slip, cslip. Can I disable anything
>here? What does NET: expect?

That's not a prompt, although I understand why you might think it is.

What's happening there is that the /etc/rc.net shell script is being
run. This script reads the /etc/NETCONF configuration file, and starts
up a number of possible programs and daemons. One of the first things
that happens is that it does an "echo -n 'NET:'", in preparation for
listing all the network daemons that it may start. Since it is a shell
script, it can take some time.

In your case (and mine) the only one it starts is inetd.

While it may appear that your keystroke was required, if you wait a
few seconds, you'll find that it isn't, unless you've broken something.
:-)

The only scanners I know of the work on the Falcon are the Migraph Colorburst scanner (really a Mustek hand scanner but you need the Migraph software) and the flatbed HP 4C, Epson GT and Action scanners and the Mustek Paragon series, each of which needs Falcon specific software. The cheapest package is the Migraph but not very far behind is the Paragon with CGS driver and your results should be much better if you have the desk space -- flatbeds are B-I-G!

Yes, Speedo 5+ and NVDI 3 or 4 can handle True Type fonts. Speedo handles Postscript Type 1 also as does NVDI 4 with an add on module.

MO> I've heard this warning for years, but I've never once heard a
MO> decent explanation of why it might be damaging to an auto-
MO> parking drive to force it to park manually.

Hi Michael,
This is absolutely wrong!
You can never damage an auto-parking drive by parking it with some software.
What happens is that a command is sent to the drive to place the R/W-heads at a
safe (normally the highest) track and this is exactly what happens when you
shut the power off - the rotating energy of the motor is used to drag the heads
to this safe track. If the heads are already there - nothing happens at all!
Most drives even stop when you send the Park-command.

Best regards,

Claes

LC> be the jumpers.

LC> I have spoken to various large companies, none of which have
LC> any specific falcon drives and all think that a PC drive
LC> should work but not sure exactly how.

Hi Leigh,
You should be able to use a standard 1.44MB drive in the Falcon.
The first thing to do is to change the jumpers. Normally they are set as Drive select 1 and this works in PC's, but in the Falcon you have to set it to Drive select 0 or it won't be recognised.
Next thing is the flat cable. The original drive has the connector upside down, so you'll have to turn the cable so it seems to be wrongly inserted (according to the slot in the drive's connector).
If it is connected the 'right' way around, the drive LED will light constantly, but nothing else happens - just reconnect it like I described and it will work.

***** The following info was taken from AtariWorld's December-95 issue, side 93, written by Steve Bradshaw:
You might have to connect a series R-C network between the 'disk present' line (by the small switches at the front of the drive) and pin 28 on the flat cable connector.
What happens when doing this is that a 0V-pulse is sent to the computer's write-protect line every time a disk is inserted and this seems to be what the computer is looking for and some drives don't do.

Best regards,

Claes

d> device (peripheral) to convert those signals into NTSC (TV
d> signals)??

Yes, the monitor socket supplies:
PIN
6 Green
7 Red
9 H.Sync
10 Blue
12 V.Sync

Video is 1v into 75 ohm
Sync is 5v into 3.3Kohm

You ought to be able to buy a modulator from a decent electronics shop.
Radio Shack, Maplin etc. but why not use the RGB direct into a monitor
-much better results.

JP>2. Is there an advantage of the FX ram expansion over conventional Ram
JP> expansions?

Both the FX and the Magnum Ramcard install Fastram, which can not be used for the video memory - and which is a lot faster because of this. Memory transfer rates can be over 2* faster than standard RAM when using 256 colour/highcolour modes)measured on a Magnum card, the FX should perform similar).

VL> again..Warp9 has given me some problems with some other good
VL> programs.

Being a devoted Warp9 user, your words hurt me :)

I recently had occasion to have some problems with Warp9, too, and found that turning off 'screen acceleration' using a .dat file (see the Warp9 manual) can sometimes fix it. I also use the .dat file trick to turn off 'block' and 'jump' for programs that use the right mouse button. Any of the parts of W9 can be turned off this way. Since W9 has many parts, you would want to try them all.

I am sure that most Cubase (and Notator) users have eliminated autos and desk accs by the ton, since MIDI prgs are notorious for conflicts with these. If I ever get into MIDI, as I want to do, SuperBoot (or other boot manager) will become my best friend.

>If they are, would it and the associated software work on the Falcon?

Logitech makes fine scanners - they're practically an industry
standard. The "associated software" would require an interface
cartridge and software compiled to work on the Atari; I have an older
scanner/cartridge combo with Touch-Up, and it works very well on my
MSTe and Mega 2.

In general, CBHD should be able to drive such configuations. I don't
have such a configuration anymore, so I wouldn't bet my house on it 8-)
(Especially since I don't have a house...)

I know, however, that the "old" CBHD (version 4.33) still works fine
with systems like yours. If you can't configure your system and driver
to work fine, we might want to try the old version.

>
> "Kein SCSI-Treiber installiert
> Bitte SCSIDRV.PRG starten
> Abbruch"

The new CBHD consists of two parts
- a generic SCSI driver
- the "main driver program"

In Steffen's distribution, there are two different CBHD*.PRG programs.
The larger of them contains the generic SCSI driver, the other
builds on SCSIDRV, so SCSIDRV (or SCSI.RAM, if you have MagiC)
has to be installed before.

Just use the larger CBHD version, and everything should be fine.

Hmm...apparently, I should have done a bit more research into the current state of the ST market before
etting my price...I I seem to have been WAY overpriced. Thanks to all who mailed me regarding my last
message.

My system is still for sale, with a few ajustments.

Atar 1040 ST, SC1224 Color Monitor, Supra 105 meg external HD, Atari 1200 baud modem, Golden Image mouse with MouseMaster unit, LOADs of softweare including NeoDesk 3, 1st Word Plus, DB Man, GFA Basic, Mark Williams C, and many others. Also included are several books on the ST and programming topics.

Asking $500 for the lot, I'll pay shipping. The hard drive is partitioned and preloaded with a lot of software (all of which I have original disks and manuals for, and most of the boxes). Any questions regarding the system, or any offers, can be mailed to:

meye8732@uidaho.edu
or
derekm@moscow.com

Be seeing you.

Just use a normal text editor, I recommend Everest with the HTML-"K"urzels",
which you usually find at the same place.
Writing HTML code is very easy, just look at sources of other pages and do
what they do. If you install EVEREST as viewer for the sources in CAB and
use multitasking with Magic, then you can easily check your work.
CAB does even do a syntax checking, so if they smiley doesn't smile anymore,
you've done something wrong. This way, you avoid incorrect pages (something
you find all over the place).

Give it a try and after a couple of days you can call yourself WEBxpert :-)

> I've heard a rumour there's a 3.30 version. Is it true and do I need it?

It's true, 3.30 is the current version and has been for one and a half years. A demo version can be found on ftp://acp5.chemie.uni-kl.de/pub/atari/.

OUTSIDE automatically locks media in removable media devices if the swap partition is on a removable media if an XHDI compliant hard disk driver is present. This enhances security because the media with the swap partitions mustn't be removed. With the unlock program you can remove the lock in order to remove the media.

: : If you are interested in this new FTP site, let me know!

This sounds like an excellent idea.

I would also be interested to know of any existing areas with Calamus fonts/other things. Any ideas?

Best of luck with your ftp site!

4101. UUCPPoint Light will not work with Usenet. Any ideas?

Newsgroup: comp.sys.atari.st
Date: 1996-02-27 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <4gurfo$f51@status.gen.nz>
Source record: 149616

I have recently been trying to get UUCPPoint (or UPoint?) Light to work with the Usenet. It seems to be ok for email, but it simply will not receive the usenet at all, nor will it post to the usenet.

Has anybody had similar problems? Any ideas?

Also, running on two floppy system on a 1MB ST, I am told it "deletes itself" and then freezes just after the modem connects. Apparently this problem is intermittant. Any thoughts?

Thanks for any suggestions!

4102. TOS 2.06

Newsgroup: comp.sys.atari.st
Date: 1996-02-27 00:00:00 UTC
From: <>
Message-ID: <4guprg$pl4@btmpjg.god.bel.alcatel.be>
Source record: 149617

Hi,

when everybdoy was posting about TOS 2.06, I wasn't paying any
attention to it, but now I am wondering if it is possible to
remove TOS 1.02 from my old ST and put in TOS 2.06, without to much
modifications to the system.

My system is an Atari 1040 STf wit 1 Mb RAM, Megafile 30 and SM 124

I know TOS 1.02 is 192 K.

Is TOS 2.06 also 192K?

If yes, can I just plug them in??
If no:
- How big is it?
- What does it support, that TOS 1.02 does not??
- If I stick with TOS 1.02, what will I be missing?

Regards, Peter

But they wont sell you one - they'll just take your money,
and then not bother to allocate one. (speaking from personal
experience - I've been waiting over 2 months now).

The Windsor branch said yesterday 'we haven't had any since
the shows', yet at the London branch, they said 'yes, the
last one from the last batch is being fitted today'....

I agree - all of mine park the heads & spin down when I use Supra's PARK.PRG
or PARK.TOS (both supplied with the Supra utilities).

AFAIK (and please correct me if I am wrong) HDDriver is also able to spin
down drives if a preset time limit for inactivity has expired.

It automatically restarts the drive before any access.

Maybe this start/stop is a feature most often used in laptops.

You need zoo.ttp, the archivers you have tried will not work (as you know!)

It should be on BBS and most ftp sites. If you cannot find it email me and
I will send it (it's only about 20-30k I think). Version 2.1 I think...

Hope this helps

Edith also has html kurtzels/kurzels (macros) although it doesn't take
long to memorize most of the commands. As the others have said, CAB does
a good job on syntax checking, but I've found lynx to be a very good
proofreader also. It catches things like a missing ";" on the " that
CAB and Netscape don't and you can make sure your page makes sense even
without graphics etc.

wri files are slightly different from straight ascii If I remember
they do have some formatting info in them as well. (they are microsoft
write files arn't they?) If they are and the school are loading them
into write then all they have to do is click on the file selector
thing in windows and change the filetype from *.wri to *.* and change
the drive to A: then when they click on the file it should either
import straight away or say its not a write file do you want to import
as ascii click yes and it should be imported no problems. This is all
from memory so sorry if its a bit vauge :-)

] files, this is for safety reasons i presume,
] The disk is NOT a problem Kobold does that nicely :)
]
] Heres the daft question, he cant load the ascii file, can I somehow make
] it into a wri file without having to buy software that would cost more
] than a printer ?
]
] Hope I havent made a plank of myself again :)
]
] Cheers........!ynoT

Yes it will Tony. From the file menu select 'open'. Below the file list is a document type selector which will be set to Microsoft WRI files as a default. Select 'all files' from the type selector and load the ascii file from disk.

MS Write will see it is an ascii file and ask if you want to convert it to .wri format. Make yer choice and it will load accordingly.

As you will know, garbage and funny symbols on the screen mean it was not an ascii file to start with. Save yer file in DOS format and Bob's yer Aunties live in lover!

Hope this helps. Phew! time for a lie down...

The answer is no since TOS 2.06 is 256 KB long.
If you want to upgrade your TOS, the latest version
you can use probably is TOS 1.04.

>ip addr
>domain addserver
>time server

Pipex should definitely give these to you. You'll need some nameservers
to resolve hostnames from them, and if you plan on doing mail, you'll need
an smtp gateway as well. Don't worry about the time server; I'm pretty
sure Pipex doesn't support Network Time Protocol.

>

This field should be your hostname, not pipex's. They should have given
you either a fixed IP address or an accountname to use as a hostname.
Either way, they should provide that to you.

>Your ip address here
>##ip addr [0.0.0.0]

I guess your ip addr is dynamically assigned.
>## I am trying 134 for the baud rate at the moment

You should use your modem's baud rate under baud rate, and dev
should be pp0.

>>
>dial sl0 dial.txt

Make sure you have your dialer file configured right as well. I think there
is an example one in nosfiles.lzh on atari.archive.umich.edu.
Test the serial port by typing "tip sl0" in your case and issue standard
at commands.

4121. floppy drive controller

Newsgroup: comp.sys.atari.st
Date: 1996-02-27 00:00:00 UTC
From: naderr@topaz.cqu.edu.au
Message-ID: <1996Feb27.235807@topaz>
Source record: 149636

Hi,

I recently purchased a DS/DD FD for an ATARI-520ST becuase the
existing drive was faulty. The problem is that the new drive
has 2 rows of pins for the data connector (like for a PC) where
the previous drive has only one row (must have been SS or something).
Anyway, I assume its the controller now that I have to change.

Is it possible to replace/upgrade the floppy controller on this machine?

Please direct email reply to naderr@topaz.cqu.edu.au

TIA,

Rob -

'm not sure that that's true, Dennis. Jack will have a 28% stake in JTS.
I have no idea what percentage Tandon & Mitchell have. If the numbers are
correct, current Atari stockholders will own approximately 60% (does that
include the Tramiels?).

You could use my free music program which is a Music Studio look alike. It will save any .sng from MStudio to a format 0 midi file. Available now on GEnie and Compuserve. I can also uuencode it to you. Latest version corrects Hardrive access bugs.

Mark Feaver mfeaver@s3.sonnet.com Stockton, CA USA

As you read this, it might just work. ;)

If I haven't misunderstood things completely, you could just examine your DOMAIN.TXT & see if you can find the (numbered) IP address for your mail server in there. If you can, I'm convinced that you can safely exchange the number with the name, seeing as NOS now knows the address.

At least that's what I went through - first I had to enter all addresses as numbers, but after the first connections with the servers, the names were recognized.

Pop3 is another style/format of email. Pop3 is better, from what I have been
told. Basically, if you are getting newsgroups but no email, then chances are
your ISP is using pop3 email protocol. NOS_POP3 fixes that. -gkelly@sat.net-

This is true as far as just switching ROMS is concerned but you can
buy switchers from any good Atari dealer which keep both sets of ROMS
and give you fantastic compatibility, I use one with a mechanical
switch and I wouldn't be without it.

4139. CHBD-explanation wanted

Newsgroup: comp.sys.atari.st
Date: 1996-02-27 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <313244402b0e0c2@sn.no>
Source record: 149743

There's been a lot of discussion here lately about a program called
'CHBD' which I found out was a harddisk driver, but what's it all about?

What's the difference between harddisk software?
I've just had a harddisk for approx 1/2 year- together with an
ICD 'The Link II' SCSI adapter.
I've naturally used the SCSI software from ICD that came with it,
formatting and partitioning it.

Now, I'm on the verge of getting hold of a new SCSI unit, and naturally
will be doing the whole procedure again before I transfer all the data from
my old harddisk to the new one.

So, now would be the time to find out if I should use different software
and in case, why?
As I've only formatted/paritioned a harddisk once I wouldn't know which
software is good or bad and if it's any use trying out something else at
all. I'd like any information on the matter.

As for the computer (in case it matters)- it's a 4MB STE with
TOS 2.06 (UK).

> job of peeks and pokes ??? in which where to and what values ???

I havent coded seriously in Basic for about ten years, although i have
dabbled with Hisoft, GFA and ST basics in the last few years.

So I guess I am a bit rusty, but here goes...

REM BASIC needs line numbers! {[:-)]
REM add line nums if necessary {[:-)]
REM assume LPEEK(x) returns 32-bit longword at address x
REM assume LPOKE(x,y) puts 32-bit value 'y' at address 'x'
REM assume jar is available!

DEFLNG a-z REM all vars are 32-bit integers

fpu = &h5f465055 REM fpu cookie is '_FPU'

cptr = LPEEK( &H5a0 ) REM &h5a0 = 1440 decimal. Get cookie ptr
WHILE LPEEK( cptr ) <> 0 REM While we havent reached the end of the jar
IF LPEEK( cptr ) = fpu REM Is this the fpu cookie
LPOKE( cptr+4, 0 ) REM Yup. So zero it's data (means no FPU)
EXIT WHILE REM Exit from while loop
END IF REM End of "if"
cptr = cptr + 8 REM Increment pointer
END WHILE REM and try again

REM You may need to replace "EXIT WHILE" with a "GOTO first line after loop"
REM You may need to replace "END WHILE" with "WEND"
REM This routine can be generified quite easily to look for any cookie

> Compendium?

The lattice 5.60 manuals are an annoyingly bound ("Wont lie flat")
reprint of the v5.x manuals.

<RANT>

BRING BACK RING-BOUND LIE-FLAT MANUALS!!!

</RANT>

The "Modern Atari System Software" book that accompanies C v5.60 contains
mainly documentation to the system calls added in Falcon TOS.

IT IS RING BOUND! HOORAY!!

As to hardware details, it is sadly lacking in comparison to the Compendium.

I generally look at the MASS book to get a brief overview, leave it open
at that page, then look in the Compendium for more detail. Comparing the
two, I'd rate MASS at 6.7, and Compendium at 8.7 (higher marks would have
been given for the Compendium, but it doesnt lie flat!)

signed,
Gaven "ring-bound" Miller

Check the Makefile for something about 192K Toses. I know you used to have
to change something in the Makefile, but it might be automatic now.

>One other thing. When I compiled the Stonx sources, I got an error when
>compiling audio.c at line 500. I had to comment a few lines out to get
>it to compile. I ran stonx with -noaudio in case this proved to be the

What OS are you compiling it on?
I had a problem compiling under Linux with Voxware 2.9. For some reason
it had detected that I was using Voxware 3.0, and I got errors from audio.c
Get rid of the "#define LINUX_AUDIO_VOXWARE3" from audio.c if this is your
case. It should then compile fine.

Midi Music Maker can convert a Music Studio .SNG to a standard Midi (.MID) file (either type 0 or type 1). It can also handle many other song formats.

I don't know of any Quartet converters.

There are also .MID to .MOD converters. I don't know if they've been ported to Atari yet, but source code is available, so porting should be trivial.

Re: C-LAB licencing agreement/MagiC might have that covered:
No, MagiC doesn't have it covered, because the MIDI implimentation still
has major flaws. Same goes with Mihocka's Gemulator board from what I
hear. The musical folk either need the genuine C-LAB/Atari hardware,
otherwise travel cross-platform & buy new high-priced software.

4151. STiK FTP v1.01 - No English .RSC?!?

Newsgroup: comp.sys.atari.st
Date: 1996-02-28 00:00:00 UTC
From: jws4p@fermi.clas.Virginia.EDU
Message-ID: <DnGv99.In6@murdoch.acc.Virginia.EDU>
Source record: 149456

I downloaded the revised edition of FTP for STiK, MGFTP101.LZH, from ftp.on-luebeck.de in the \pub\systems\atari\internet\stik\ftp directory. This version is supposed to address the anonymous ftp bug in the first version, as well as add some new features. Anyway, unlike the first version, this one seems to have no English .RSC (as far as I can tell). There are two .RSC's in the archive (both called MG-FTP.RSC, the second one in an \RSC directory and difficult to extract due to non-unique name), but they both are the German .RSC. Does anybody have the English .RSC for the new version, or know if the old .RSC will work (I deleted it).

Thanks,
John

ps to anybody who is having trouble getting the STiK dialer script to work, try installing HSMODEM... that solved my problems completely, and the exact same script that wouldn't work before now does.

>What do I do with it now ???? .....is there a player programe for this
>type of file ??? If so what's it called ????

Not a dumb question at all. What you need is a program called MSA_2_3. It is available on most major ftp sites. I know it is on uni-paderborn.de and funet.fi. It is in the atari archivers sections. What an msa file is is a digital disk picture. What I mean is that msa takes the entire contents of a disk and makes it into a single file. This makes it easier to transfer via modem. Once you get the msa archiver, you will need to unMSA the file to disk, then your new demo should work just fine! -gkelly@sat.net-

>one local MS/DOS BBS (I did mention 'little' town...) Getting this
>message out requires a long distance call for me.

Ok. There are three main packages out there for the TOS machine owners that want to access the net.

MiNTNet - The most difficult to set up, requiring a dedicated hard drive partition, among other things, but does have utils for the internet. (Works with SLIP & PPP) I have tried 3 times to set it up on my falcon system, and only got it partially working on one occasion.

NOS/Oasis - Net Operating System and the GEM reader/editor Oasis work as a team to give you email, newsgroups, ftp (file transfer protocol), and telnet (like using the internet to dial long distance to other sites without having the ld bill. Hitch is that the telnet must be to another place hooked to the internet, not just any ld bbs!). NOS/Oasis 1.35 works with SLIP & PPP accounts, and is, at the moment, a MUST HAVE for sending/receiving email and newsgroups! There are different versions of NOS that allow connection to more types of email protocol servers. Currently the most common version popping up in the U.S. is POP3 email protocol. This requires that you also get NOS_POP3. To find out, you can ask your ISP, or, if you get newsgroups working in nos, but no email, then chances are you need nos_pop3. I am using that package right now! Works pretty well, too!

CAB/IRC/STiK/MG-FTP/TELNET - This is a suite of programs that all work off of the STiK desk accessory, which allows SLIP internet connections. PPP is only supported if you're running MiNT (see above!). CAB is a World Wide Web browser. IRC is for internet relay chat. MG-ftp is an ftp program for STiK, but is still in early beta stage, and is, from what I can see, still quite buggy. Telnet for STiK I have not tried. The CAB/STiK package does not yet offer email or newsgroups, which is probably the most important aspect of internetting.

PRIORITY NUMBER ONE! - GET A BOOK! I personally recommend "The Whole Internet". It is a big purple book. It is an invaluable resource for understanding the internet! Buy the book, get Oasis/NOS, and with both of them, and a few calls to your ISP, you should be up and running in no time! When they ask what kind of computer you're using, tell them it's an atari, and that you would just like the answers to a few technical questions. Some of

the questions to ask are:

What is the DNS ip?
What is the news server ip or name?
What is the mail server ip or name?
What is my ip?
What is the proper MTT setting? (Usually 1500) (for STiK)

The answers to those questions should yield enough info to get NOS/Oasis set up and operating correctly. But, as stated, BUY A BOOK! You WILL need it if you want to get set up in the shortest amount of time with the least amount of LD calls! -gkelly@sat.net-

>can't find the include files. My simple hello.c gives an error:
>`can't find stdio.h' or something to that extent. I have set GNUINC,

What shell are you using?

>tried GCCINC and even
>% gcc -I- -I/usr/include hello.c
>all to no avail. Ere the paths hardwired or something? Or am I doing
>something very wrong? (Probably... :-( )

You have to be very careful on how you set the variables. I use gulam, and
this is from my gulam.g script:

```
setenv GCCEXEC e:\gnu\bin\gcc-
setenv GNULIB e:\gnu\lib
setenv GNUINC e:\gnu\include
setenv TERM vt52
setenv TEMP c:

setenv HOME c:\bin
```

I hope this helps some!

4155. Re: bincancel:16 large binaries:AR178:@@NCM

Newsgroup: comp.sys.atari.st
Date: 1996-02-28 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-178.a@redpoll.mrfs.oh.us>
Source record: 149460
Cross-posted to: alt.retromod,comp.lang.ada,comp.sys.atari.st,news.newusers.questions,rec.games.computer.quake.misc

Binary posts do not belong in unmoderated discussion groups.

I run a program that searchs for, and issues advisory cancels for,
large binaries in the akr, biz, comp, misc, news, rec, and sci
hierachies.

I have issued 16 cancels for large binary files (average size 194,872
characters - total size 3,117,967 characters) posted to 5 different
unmoderated discussion groups in the comp, misc, news, and rec
hierarchies as follows:
11 misc.test
2 comp.sys.atari.st
1 rec.games.computer.quake.misc
1 news.newusers.questions
1 comp.lang.ada

The cancels in the alt groups are an unavoidable consequence of the way
cancels work. A cross-posted article is only one article. When it is
canceled from one group it is canceled from all groups.

This pointer is being posted to each affected group listed above, with
the exception of misc.test.

If you want to see exactly which file was deleted from a particular
group, or the criteria that I used to select it, read the full report
in news.admin.net-abuse.announce. Look for AR178 as in the
subject of this pointer. The full report can also be found in
alt.nocem.misc and alt.retromod.

There has been a long-standing consensus among news administrators that
binaries belong in binaries newsgroups, and not elsewhere. There also
seems to be a consensus supporting the cancellation of large binaries in
discussion groups as long as appropriate protocols are followed.

In my opinion, the best way to distribute binary files is via ftp or
the web. With the ready availablity of ftpmail servers, even uucp
sites can retrieve binaries from ftp sites.

However, if you really must post a binary to Usenet, please post it to
an appropriate binaries newsgroup such as alt.binaries.misc. Then, if
you like, post something in the appropriate discussion group telling
people where to find the binary in the binaries group (a pointer to
the binary). This will permit news administrators and users to decide
for themselves whether to receive the binary files.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. Thanks.

Best wishes,
Dick

4156. Press release type thing

Newsgroup: comp.sys.atari.st
Date: 1996-02-28 00:00:00 UTC
From: DuSTman@dansoft.demon.co.uk
Message-ID: <825622402_OASIS_@dansoft.demon.co.uk>
Source record: 149461

A freind of mine wanted me to post the following here....

[Quotes start]
Subject: "Press release kind of thing"

The next issue of "ST News" - the issues Volume 11 Issue 1 and Volume 11 Issue 2 rolled in one (i.e. the 41st and the 42nd ones) - will be the final one. Yep, exactly 10 years after the first issue was released in 1986, July 27th 1996 will see the release of the latest issue.
Now what I - the editor - would like you to do is write a small bit of text and email it to me. The small bit of text could express sorry and sadness, of course, but could also say something along the lines of what ST News meant to you, your company, your crew, etc. So to Michael Schussler, founder of "Maggie", it might be "because they stopped in 1990 I decided to start doing a magazine on my own". Stuff like that, you get my drift? Or someone might have read a coding article by TEX or by Stefan and started coding. Or someone might have laughed himself a hernia. Or someone might actually have decided to sell his Atari altogether because ST News was just too crap. Negative, positive, everything is OK as long as it's serious. I would like to compile a large article with reactions to the demise of "ST News".
Please spread this file to as many people as you want. Please put it on the Newsgroups you feel it ought to be on, or spread it to your Atari friends (or even people who were once in the scene and now aren't anymore). I would really like this to be a major success!
So come on and start writing! My email address is r.c.karsmakers@stud.let.ruu.nl. If you want that latest issue, send a *HD* (yes, *high density*) disk to P.O. Box 67, NL-3500 AB, Utrecht, The Netherlands, together with 3 IRCs.
Cheers, people, and see ya in the last issue!

From: fredu@enterprise.america.com
Message-ID: <4h192q$97a@enterprise.america.com>
Source record: 149464

I still have a Migraph wand scanner to sell. This unit scans in a full 8" page width as you roll it down the page. The package includes Touch-up and Migraph OCR, a great program. I will also throw in my original Easy Draw disks, but I don't have the manual to that one. Also included in the package is a Migraph 4" scanner that uses the same cartridge and power supply as the wand.

I saw one posted here for sale at $200 and also posted near that price and got zero replies. Now I am just asking best offer. If you have any use of a scanner, this is one of the better items out.

> formatting and partitioning it.

The most important difference between CBHD and the other drivers is
that CBHD is free (Steffen only asks you for a shareware fee for the
configuration program).

Next, CBHD is pretty fast. It is also the driver which adheres most
closely to the SCSI standard; the benefit for you is that more
drives/general SCSI devices (such as scanners and the like) will
work with CBHD. CBHD also supports background transfers under
MagiC, so you can continue to work with your machine while a
batch job is copying files from your hard disk.

Apart from that, there are lots of configuration possibilities
in CBHD (although the current configuration program does not cover
all the switches).

The configuration program does not have any options to partition
a hard disk. You will have to use other tools, such as ICD's, for that.

I've been trying to set up WWW116 on my Mega 4 MANY times, received help from manymany people (THANK YOU ALL!!! :) and tested every possible combination of parameters with no success -- every time I try to open a remote URL with CAB, I just get two bombs.

```
|~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~|
| So, I'm announcing a competition: whoever tells me how to get this |
| WONDERFUL program working, will receive a 100 FIM prize! |
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
```

I'm really grateful to all you who have been trying to help me, and I'm N-O-T saying you didn't try hard enough -- I just don't want to bother anyone with my stupid problems without a compensation anymore.

I'll post three uu-encoded packets after this article:

- CAB.LZH (Everything I've got in C:\MODEEMI\WWW\CAB)
- STIK_CFG.LZH (Everything from C:\STIK_CFG, password changed..;)
- TMP.LZH (CAB cache files from C:\TMP)

My hardware is:

- Mega ST 4 (With auto progs & ACCs over 3 megs of free memory.)
- Atari MegaDrive 40 HD (Over 16 megs of free space.)
- TOS 1.2
- B&W monitor
- Supra FAX-Modem V.32bis

Auto programs and ACCs:

- HS-MODEM 6
- Tera Desktop
- ST-guide v. 05.02.1995

The URLs I've been trying to open:

- http://www.jmp.fi
- http://www.uku.fi
- http://www.uku.fi/~hovila
- http://www.sci.fi
- http://www.sci.fi/~jysky

If you need more info, just mail me!

I'll now re-install WWW116 and I won't make any changes to the configuration files. Then I'll try every tip I get in the same order as I receive them. The one that makes CAB work, is the winner!

```

>setenv GCCEXEC e:\gnu\bin\gcc-
>setenv GNULIB e:\gnu\lib
>setenv GNUINC e:\gnu\include
>setenv TERM vt52
>setenv TEMP c:

Well, I see you have \ instead of / in your paths. I have found out
since, that this could be the problem. I tried
% gcc -I- -I\\usr\\include
and that worked. Do you know how to set up GCC to use `real' path
separators? :-) I'm no hero with UNIXMODE; when I tried the setting
in the GCC-docs (the old ones, by Frank Ridderbusch), I forgot the
exact string, then MiNT couldn't find my /etc/utmp file anymore and
hung. It took considerable pain to restore that, as my minix
partition wasn't of course accessible w/o MiNT...

Also, I got _very_ strange preprocessor errors. Comments spanning
several lines hopelessly confused it, and it even read a part of
compiler.h which was clearly #ifdef __TURBOC__ !!!

>setenv HOME c:\bin

:-) Is this _really_ necessary? I _hope_ not...

4170. Invoice Program for ST

Newsgroup: comp.sys.atari.st
Date: 1996-02-28 00:00:00 UTC
From: mike@coconut.demon.co.uk
Message-ID: <825625590_OASIS_@coconut.demon.co.uk>
Source record: 149475

Hi All

I'm on the look out for an invoicing program for the ST. ATM I am using Papyrus in form mode (great idea) to fill in and print out invoices, but being graphics-based the print out is very slow. It's not a huge problem at the moment as I only do about three or four invoices a day, but I can see a time when the slowness of this system will irritate me.

Therefore, has anyone got suggestions to give me on a cheap commercial or shareware invoice program, that is hopefully still supported, and is reliable?

I'd appreciate any responses either to this group or to my e-mail address:

mike@coconut.demon.co.uk

Thanks in advance for any help/suggestions.

ATBeST
Mike

4171. I'll pay you! -- NEW INFO!

Newsgroup: comp.sys.atari.st
Date: 1996-02-28 00:00:00 UTC
From: jhovila@muikku.jmp.fi
Message-ID: <4h2iar$m3@muikku.jmp.fi>
Source record: 149476

The problem is still unsolved. Here's some new info...

There were some errors in the setup of STiK whick I've now corrected.
They were:

- Proxy server and -port -settings in default.cfg were
commented out. Proxy server is now www-cache.jmp.fi and
the port is 8000.

- JARXXX wasn't in the auto-folder. Now it is...

To make shure the problem isn't with the graphics, I turned graphics off
from the CAB setup.

And nothing has changed: I'm STILL getting two bombs when opening a
remote URL. Local documents work OK. PLEASE help me, I live on the sixth
floor so the drop would probably kill me... (And that's exactly what you
wish, ain't it..;)

Will NOS work with a SLIP connection? If so, what would I hav to do
to my STARTUP.NOS to change it from PPP? The problem is that my news
password is different than my PPP login password, but the same as my
SLIP password.

OR, when saving the ASCII file in the first place, save it as
filename.WRI - as per usual with MS-ware, Write is fairly stupid and
will try to load ANYTHING with that extension.

Hello!

In those days .-) i trained all of my guys up to 5* Master Wizard, 3*
Master Fighter, 3* Master Priest and 1* Master Ninja (Darouu got more then
350 healtpoints and 757 Mana .The party survived 2 6*Ful-Irs directly shot to a
wall nearby. It took more than a minute to kill one of them with that special
"rocking" iron gates, they killed the dragon with 25 6*ful-ir at the first
stand. .-)
Nevertheless, the only way I managed to see a "7* Master" aka. Arch Master,
had been to give the Powerstaff to one of them.

But the training was too hard, to be NOT a Dungeon Master fanatic. (.-))
It took me more than 20 hours to achieve the last level of any kind...

I've been playing with the CD distribution - 1.13 I think, and haven't
been able to mess it up yet. It has the drawbacks of the *nix family -
lots of hunting for the right files to configure stuff etc., X-windows is
a bit sluggish, but the system itself seems quite solid. Haven't tried
any s/w except what came with it.

: Sorry.

Yes, Dirty 1.11 looks *VERY* promising indeed !! It's even surprisingly unbuggy compared to many other programs of that kind. I hope the author has the motivation to develope this program into perfection. What the program needs probably the most right now, is a possibility to use standard audio file types. They might already be there, I just haven't noticed..

It's much better than previous versions of the POP protocol. It can't really be better than SMTP since that's what all internet email is sent by for most of its journey.

Tim's address is timpy@roseivy.demon.co.uk. There roseivy.demon.co.uk is his computer, which is a site that can receive email directly via SMTP, and he can have as many accounts on that as he likes.

You're ISP runs a machine called sunbird.sat.net, which receives mail directly via SMTP. You have one account (or maybe more, but not /all/ of them) on that computer, and use your account to retrieve mail from it with the POP3 protocol.

You couldn't use SMTP and Tim couldn't use POP.

I've had no problems loading ASCII files into Write (the version supplied with Windows for Workgroups 3.11) on a PC at work. I rename the file so the extension is .WRI, and then load it in using the file/open item and the Windows file selector.

I'm then presented with a dialogue that says that the file is not standard (or similar) and i'm offered the choice to 'convert' the file to the Write format, or 'no coversion'. I choose 'no conversion' and get the file displayed in the default font.

Works for me every time :-)

Mal

4187. FS: ATARI st, accessories and software

Newsgroup: comp.sys.atari.st
Date: 1996-02-29 00:00:00 UTC
From: marks@cxo.mts.dec.com
Message-ID: <4h5jts$bkv@nntpd2.cxo.dec.com>
Source record: 149408

I have the following ATARI ST hardware and software for sale.
The computer worked when I shipped it to my Dad last year, but it didn't
run properly when he received it. He tried troubleshooting it,
but couldn't get it to run reliably. At this point I suspect the
system board, but he lives in Wisconsin, and I'm in Colorado. So I can't
diagnose it, but it sounds like a problem on the system board, since
it displays bombs when booting.

I'll sell everything below for $150 plus shipping, or individually as shown.

520ST (old style) with additional 512K memory kit $40 + shipping
Complete with mouse and user guides.
Currently does not run reliably, but could be something
as simple as re-seating chips, or maybe the power
supply is on the fritz.

ATARI SC1224 color monitor $100 + shipping
Includes original packing

(2) DSDD floppy disk drives w/ power supplies $50 ea. + ship.

ATARI ST software $30 + shipping
- spreadsheet (includes user guide)
- database program (includes user guide)

I have the following ST items for sale:
Prices in Canadian Dollars; shipping is additional, ca.$5...

Games:

SubLogic Flight Simulator II.....box, docs, disk..$10
Japan Scenery Disk for above....." "...$5
European Tour Disk for above.....disk only..$3
Atari Star Raiders.....doc & disk.$5
Bloodwych adventure game.....box, docs, disk..$10
Epyx Winter Games.....docs, 2disks..$6
Microdeal Airball.....doc & disk...$5
Wanderer..... " ".....$3
International Soccer..... " ".....$5
Airball..... " ".....$5

Productivity:

MasterPlan Lotus compatible spreadsheet
from Ditek (the Calamus people!)." " "...$10
WordFlair v.2 G-DOS document processor....." " "...$20
GFA Artist....." "...$15
GFA Raytrace....." "...$15
Cyber Sculpt....." "...$15
Cyber Texture....." " ..$15
Printmaster w/PM Plus, Art Gallery.....box, docs, disks..$15
Copy II ST....." "....$5
Quick ST II accelerator(precursor of Warp 9)...." "...$10
PC Ditto w/DOS 3.3
(run DOS programs on your ST!).....disks only..$10
HabaWriter.....box, docs, & disk....$10

Hardware:

Power supply for 520 ST (big and heavy, like a brick).....$20
SF354 external SS disk drive w/power supply.....$20
(buyer pays shipping on these items: could be significant)
Atari Koala Touchpad ..(for 8-bit).....$10

Phone, write or e-mail if you're interested.

From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <JnOpLcy.lmcclure@delphi.com>
Source record: 149411

I am looking to purchase a Mega STe, preferably in the price range of $300-$350. (The $350 price is based on a MSTe with TOS 2.06, 50meg HD, 4 megs of RAM, and a HD floppy drive).

MINIMUM SYSTEM REQUIREMENTS:

- TOS 2.06
- High density floppy drive (factory equipped or exact replacement)
- internal hard drive host adapter fitted (i.e. hard drive ready)

While I will consider systems that are lacking the above, the absence of any of the above will significantly impact on the price I would offer.

ITEMS CONSIDERED PLUSES:

- Full 4 meg of memory
- Installed hard drive (especially if Quantum LPS-series)

Purchase will be via COD (unless you happen to live with reasonable driving distance of my home), and if needed, I will prepay the shipping andCOD charges.

Reply via e-mail.

: Has anyone succesfully got into ANY site, if so then please post how :)
I have done.. what version you using? I am on v1.1 and all i do is
select the site, then click on Open (offnen) which comes up with
username and password entries (ftp and e-mail address for anon ftp)
click on OK, and then that's it..

It is a bit slow ATM so you have to wait a little while for anything
to happen.. but it sure works. :)

This message from Peter Hofman to All was spewed forth...

PH> attention to it, but now I am wondering if it is possible to
PH> remove TOS 1.02 from my old ST and put in TOS 2.06, without to much
PH> modifications to the system.

I know for certain that there are STF(M) TOS 2.06 upgrades.... and have never read anywhere that they are TOS 1.4 only. In fact, I have just checked all my TOS 2.06 reviews and none of them mention being 1.4 only... so IMHO it would work fine on your 1.02...

4197. NOS & FIST questions

Newsgroup: comp.sys.atari.st
Date: 1996-02-29 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <4h3220$5sp@news1.wolfe.net>
Source record: 149488
Cross-posted to: demon.ip.support.atari,comp.sys.atari.st

I've sorta kinda gotten NOS and FIST working here (FIST seems fine AFAICT, at least for sending outbound email), but os far I haven't been able to get any news sent either direction. Also, after NOS connects to my ISP, I have to manually ping the server before the news session will start (I've tried waiting up to 10 minutes and nothing will happen, but if I ping, it starts within a few seconds).

Here are my NOS files; I hope someone will be able to spot what I'm doing wrong.

DIAL.TXT (with my login and password suitably disguised):

```
#
# dialer script for login to 3rdplanet
#
# replace 'site' and 'password' with your values
#
configure:
init "+++ATZ\r"
dial_cmd "ATM1L3E1DT"
ld_code ""
number "274-6525\r"
retries 9
#
execute:
init
cwait 5000 "OK" "ERROR"
wait 10000
dial
cwait 25000 "CONNECT" "BUSY" "NO CARRIER" "NO DIALTONE"
cwait 6000 "ogin:"
wait 300
send "my_login\r"
wait 2000 "assword:"
wait 300
send "my_password\r"
wait 6000 ") to"
wait 5000
```

and STARTUP.NOS:

```
# startup file for KA9Q-NOS ST (DIS Version)

hostname starship.3rdplanet.com
```

```

Actually I find the easiest way with ZOO's is to use DCSEA and convert it
to a self extracting file and run it... I hate ZOO.

Inquiring minds want to know: Is Ralphie still associated with ST Report in any way, shape, or form?

I'm posting this publicly because when I've asked in less public forums, Dana, you've hemmed, hawed, and weasel, but you haven't answered he question. Ralph was the reason I stopped carrying STR and stopped reading it. If he has been disassociated from it TOTALLY, I will consider carrying it again.

From: hallvart@sn.no
Message-ID: <3135ddaa109e3b10@sn.no>
Source record: 149494

What kind of a moron is posting this kind of crap!!!!

Last week someone does a similar thing- twice. And now another idiot comes along posting even more huge UUencoded messages here. I should think that those angry followups (from me as among others) would have scared away any more attempts.... obviously not (or this person doesn't read news).

Are you aware of the fact that some people actually have to pay for the mail/news they receive? Not everybody has free/unlimited Internet access through university, work or whatever.

I for one use an offliner to pick up all my mail and subscribed newsgroups- this particular download took 4 to 5 times the time it usually takes to download. I'm getting pretty tired of this crap!!

But instead of just complaining- does anyone have any suggestions to how we can stop these kind of things happening- in a civilized manner? (I'm awfully tempted to 'mail bomb' this guy with Megabytes of mail but....).

As for advice to the person concerned (and anyone else planning stupid stunts like this)- a MUCH better idea would be to explain precisely what the problem is, then perhaps mail the offending files to a person/persons who want to help (but ask them first if it's okay to mail huge files like this!).

Most of the time though, someone here can figure out what the problem is without the need of having to look at the files. So ask first, however desperate you are!
In any case, posting stuff like this is totally out of line and inexcusable- so DON'T DO IT ANY MORE!!!!!!!!!

Source record: 149495

Scot Zarkiewicz (szarkiew@rvcc.raritanval.edu) wrote:
: Help my desktop is all in German on my falcon -- How do I fix this problem?

Well, you have a ‚non-volatile-RAM' (NVRAM) in your Falcon, in which the Falcon 'remembers' the country you live in.

Some programs may set this NVRAM to remember other things, e.g. the SCSI-ID of your computer.

If those programs don't work right, they don't care about your country, but set the country of the programmer (this is most often germany :)).

You could edit the country-byte or use a program that does this task. Since I don't own a Falcon and I live in germany, I don't know where you can get such a program.

I hope, this helps.

Stephan Gross (1gross@informatik.uni-hamburg.de)

Someone has already given you the main site, but also do check into the comp.sys.sinclair newsgroup for lots more information on games, fanzines etc. It's wonderful! :) (Reliving Youth mode on)...

4206. Mega/STe & SCSI-2 Internal ?

Newsgroup: comp.sys.atari.st
Date: 1996-02-29 00:00:00 UTC
From: mpook@freenet
Message-ID: <4h4cob$6v5@brain.npiec.on.ca>
Source record: 149497

I have been considering replacing the original Seagate ST-157N hard drive
that came with my Mega/STe 4/50. It is not giving me any problems. It
still has 0 bad sectors, but I am running out of free space. I realize
that I need to purchase a replacement that has a jumper to disable the
parity check. I know that the Atari host adapter is a SCSI-1 type.
I do not know whether any of the newer SCSI-2 drives will work, however.

Would anyone reading this, who is using an internal SCSI-2 drive with the
internal Atari host adapter inside their Mega/STe, please advise me of the
name brand (e.g. Quantum, Seagate, IBM, Fujitsu, etc.) and model number
(e.g. LT540S, ST5660N, DPES30540, M2624SA, etc.) of the drive that they
are using. Configuration details would also be appreciated.

We had delivery problems because the SIMM-sockets are a very special type, that's not an off-the-shelf package... But that is now solved.
The other problem seems to be the UK parcel service. We've sent two parcel, one to System Solutions in London and one to Windsor. The London parcel reached them after 3 days, the other is still on the way (but it left Germany...) :-(

4209. STiK-NOS-MiNT/Net - experiences

Newsgroup: comp.sys.atari.st
Date: 1996-02-29 00:00:00 UTC
From: dietj001@dialin.demon.co.uk
Message-ID: <825601598snz@dialin.demon.co.uk>
Source record: 149500

Having been a lonely fighter in the fields of Internet/Atari until
recently, I'm now eager to share some of my experiences just in case
they could be useful for some other 'SLIP Rambo'

I was able to try connections to two different providers:

- T-Online (Commercial provider of proprietary services but with
working plain SLIP/CSLIP gateway to the net)

- My University (with PPP)

I tried the known three packages: MiNT/Net, STiK, NOS. Additional
fixes other than HSMODEM were not used.

Follows a description of the outcome (I'm talking mainly about setting
up a working connection rather than the applications):

*STiK

Dialing in to the first provider worked soon without problems, the script
is easy to understand. After starting the clients similar problems as
often discussed in this group turned up. Resolving seemed to work, but
no data arrived (IRC, CAB).

IMHO, STiK does not provide header compression (CSLIP) that obviously some
providers expect (see next paragraphs) without explicitly telling. This
could be an explanation for the inconsistent experiences of many users.
I've read the docs of STiK very carefully, and they are saying that ONLY
plain SLIP is supported. Not a word about Van Jacobson header compression.

So I'm afraid STiK will only run if plain SLIP can be provided.

*NOS

Setup here was not quite as easy as in STiK, but manageable. Dial-In worked,
but trying SLIP with T-Online revealed similar problems as with STiK!

After having read the docs over and over again I found those three letters
that are options to the 'attach' command: c, r, v (after the baud rate).
I realized that I had not set header compression (the v), that T-Online
was obviously expecting. So finally everything worked just perfect.
(By the way, this brought me to the conclusions described with STiK.)

I did both connection types with NOS: SLIP and PPP. For PPP I had to
add some lines for setting up the options; the manual was a reliable help.
PPP worked perfectly from the start.

NOS Telnet cooperated with ANSI_ST.PRG (available everywhere) to improve
screen capabilities; the other side switched to vt100 mode; the only

problem was the fixed LINEMODE for telnet: you send input only after CR and hotkey controlled applications on the host are of course confused by this (because the CR is sent too).

*MiNT/MiNT-Net

I would not have started to try this if I hadn't worked with MiNT (and Linux) for quite a while. Setting up is easy if you know how Unix makes its connections ... but who does?

Anyway I found reasonable hints in the README files with 'dip' and 'ppp'; some other information comes with MiNT-Net in the little docus for the SLIP and the PPP devices.

I use the following (in loading order): FreeMiNT 1.12.5, MiNT-Net 0.80, the 'syslog' from MiNTos ('dip' and 'ppp' need it), some shell (ksh for economic reasons), dip-0something (for SLIP) OR ppp-212 (for PPP). 'dip' provides dialling and setting up the SLIP device, the 'pppd' needs an additional little utility to dial right ('chat' comes with it).

'dip' needs to grab any dynamically assigned IP address from received text, so your provider should tell you what command does display it during login. I recommend using PPP if available where address negotiation is part of the protocol and works automatically.

There is an awful lot of tuning possible with this setup, and the debugging options of the various elements are invaluable. Problems I had to deal with concerned the right setting of the baud rate (starting in TOS mode) for PPP and the dialling shell script for PPP (I have to try 3 different numbers).

Once working MiNT-Net rewards with stability and 'real' Unix feeling. The main application I run under it is Lynx, the text oriented web browser. First, of course, I was not very enthusiastic about the idea, but now I am convinced that if one looks for REAL information without needing fancy graphics and buttons, he/she is better of with this FAST and RELIABLE piece of software. Almost every HTML feature can be realized/worked around on the text screen and if you want the graphics - just download them.

Unfortunally, I could not convince MiNT to work with ANSI_ST, so telnet can only provide restricted terminal capabilities though it works well in CHARMODE (if set) where hotkeys are no problem. Any solutions to this? Is it a TERMCAP problem? (I tried all termcap entries possible)

> to my STARTUP.NOS to change it from PPP? The problem is that my news
> password is different than my PPP login password, but the same as my
> SLIP password.

I've asked the same question at times. Apparently it would work, provided that you're using a static IP address. However, I have yet to find a way to use SLIP with a dynamically allocated address. Therefore I use a hack a friend of mine made, which allows me to let STiK handle the connection, & then turning over control to NOS.

I am pretty sure that Five To Five will save in WAV format. It is a sample convertor that is able to recognise most sample formats.

It is at:

ftp: micros.hensa.ac.uk/micros/atari/tos/p/p134/

4216. To Hallvard and others - PLEASE READ!

Newsgroup: comp.sys.atari.st
Date: 1996-03-01 00:00:00 UTC
From: jhovila@muikku.jmp.fi
Message-ID: <4h5c6s$93q@muikku.jmp.fi>
Source record: 149421

: What kind of a moron is posting this kind of crap!!!!

It's me, Jyri Hovila, Kuopio, Finland. We've been writing to each other
every now and then.

: Last week someone does a similar thing- twice. And now another idiot comes
: along posting even more huge UUencoded messages here. I should think that
: those angry followups (from me as among others) would have scared away any
: more attempts.... obviously not (or this person doesn't read news).

: Are you aware of the fact that some people actually have to pay for the
: mail/news they receive? Not everybody has free/unlimited Internet access
: through university, work or whatever.

: I for one use an offliner to pick up all my mail and subscribed newsgroups-
: this particular download took 4 to 5 times the time it usually takes to
: download. I'm getting pretty tired of this crap!!

: But instead of just complaining- does anyone have any suggestions to how we
: can stop these kind of things happening- in a civilized manner? (I'm
: awfully tempted to 'mail bomb' this guy with Megabytes of mail but....).

I've got one. Stop flaming. There are zillions of people like me who are
more or less new to the Net and Usenet, and are not fully aware of the
proper manners. I recently posted by accident an article to a wrong
group, and received a friendly, very informative mail where I was told
for what kinds of postings the group is for. There was also a FAQ of the
most "popular" questions on the group. Send a friendly mail like the one
I received to those who haven't got as good knowlegde of the group as you
do, and ask them to store the mail and send it on if they bump into a
similar case. Also, you could post an article for the new users to
the group once or twice a month.

Then about the "free/unlimited Internet access". I do pay for my
connection. I use tin on the remote host to read the news, and I did not
know that an article like the one I posted can really be expensive for
you or others. I'm truly SORRY about this! I'm not saying that I'm
innocent, but sending that informative article would probably have
prevented this from happening.

One thing I can't understand is that yet we have "talked" to each other
several times, you seem to be ready to send me to the deepest hell for
just one slight mistake. Actually it's quite frightening. I'd be happier
if I could trust on the people I'm in touch with. This kind of short
nerve flaming is really frightening.

: As for advice to the person concerned (and anyone else planning stupid
: stunts like this)- a MUCH better idea would be to explain precisely what
: the problem is, then perhaps mail the offending files to a person/persons
: who want to help (but ask them first if it's okay to mail huge files
: like this!).

That's a good advice. I'll keep it in mind.

: Most of the time though, someone here can figure out what the problem is
: without the need of having to look at the files. So ask first, however
: desperate you are!

: In any case, posting stuff like this is totally out of line and
: inexcusable- so DON'T DO IT ANY MORE!!!!!!!!!

How would you feel if you moved to a foreign country, met a lot of nice
people there, but one day the police came and arrested you and you'd be
put to jail for 15 years because you used the word "smile" -- nobody just
hadn't told you that using it is absolutely, completely inexcusable? You
HAVE to make the rules clear before starting to flame people this way!
There will be many new users on this group too who are not familiar with
the rules of it. Please be patient with them! I will now start assembling
some kind of a FAQ about this group, and I hope it will be passed on to
all the new people coming here.

****
Once more: * I'm sorry! *

4217. NO BINARIES in this group!! (stop UUencoding here!)

Newsgroup: comp.sys.atari.st
Date: 1996-03-01 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <313637062ea0a10@sn.no>
Source record: 149422

As several people here have posted huge UUencoded files lately I'd like to take this opportunity and point out that this groups is a *discussion* group- NOT a place where you can dump *anything* regarding the ST.

There are specific newsgroups devoted to binary uploads (though many providers refuse to have them because of the amount of disk-space they occupy).

Many people wouldn't care less if somebody posted 5x 100Kbyte UUencoded messages, but I for one will!- why? Simply because I grab all my news and mail offline, which in other words means-
more mail/news=more online time=more money to pay.

So, please be considerate and don't upload Uuencoded messages here (exceptions are of course teeeny weeny Uunecoded files that don't take up any more space than a small posting), but in general- no Uunecoded messages in newsgroups except ones which are specifically made for it.

The alternatives.... if you want to share a program with others on the net- let THEM choose if they want it or not- upload it to an FTP site or have it in your web page (or let people ask you for a Uuencoded copy and mail it directly to the person asking)- *announcing* uploads is of course okay ;-)

If you're really desperate about programs/files that don't work, don't dump the whole thing on everybody reading the groups- post a message explaining the problems *clearly* instead- there's a big chance somebody in the group knows how to resolve the problem. If you really do need people to look into the file itself, post a message about it and those interested will ask you for a copy to mail directly to *them* and them only.

Posting Uuencoded files like this not only gives a lot of people problems but also makes you mighty unpopular on the net.
Now you don't want that, do you?

Hallvard

Source record: 149423

OK. I have been using the 1040STf i was gifted last year for a few games. A long-time associate said the following:

"I didn't know that you were interested in Atari systems. I have two 520STs that my wife was going to put in a garage sale. If you want them, they are yours."

I accepted. Now for the question portion of this post.

I still don't know much about these systems and the 520 systems added more confusion. The garage sale box consisted of: two 520STs, one SC1224 monitor, two SF354 disk drives, one SF314 disk drive, and all of the cables and power supplies to make them work. I know how to hood them up and have a loose understanding of how they work, but I seem to recall that some of the STs were able to hook to a TV. I know that the machine has to have the appropriate modulator and I believe that one of them does have it (RCA jack on the back). I have tried to hook this to a video input on my entertainment system, but it doesn't work. What am I doing wrong.

Dave

Yes I have. MagxDesk works fine. It's just Ease4 that has the problem!
I think I'll send it back for a refund. I was under the impression Magic4
and Ease4 were designed to complement each other! And not being able to
change the screen res on a Falcon makes it completely crap to me!!

No, you don't - I'm using MagiC4/Ease4/Outside3.2 on a Falcon with no problems, it's
working
extrememly well. I have Outside before Magxbo32.prg, and it
works on either IDE or SCSI drives OK.

The only thing it does is prevent SHUTDOWN from letting me do a warm
boot, only the cold boot works. But there's always the reset button :-)

Hi Dada

Talk about being blatant or what!

If I was going to help kill a platform, I wouldn't be quite so open about
it.

Breathtaking!

Apart from which, isn't there a shareware program called Routefinder, which
is apparently very good and only costs a tenner?

If we don't support shareware and continue to rip off people's hard work we
can kiss goodbye to the Atari platform and give a big welcome to Bill Gates
and co software and all that entails :-((

Let's hope no-one is moronic enough to supply pirate/cracked copies of
anything to this person.

ATB to Dada, but not the other guy :-(
Mike

No. Reinstalling the driver (using the HDDriver software) should do
the trick.

>> that you can stick on an ASIC for integration with other things. So, you'd

I guess Motorola probably provides it that way also, but on their WWW pages
they have information about two actual processors in the Cold Fire series.

>> CPU core - the Coldfire core gives you performance in between an 040 and an
>> 060. Very good, and quite able to compete with the ARM core that is widely

From the documentation on the WWW site, it looks very much like a stripped
down '040. There's much less cache for example.
Peak performance is 1 instruction per clock cycle, which is more than a
factor of two worse than the best the '060 can do.

>"They have also announced the 'Coldfire', a new processor architecture based on the 68000
>but with many instruction set features omitted. Coldfire is:
>
>* not backwards compatible with the 68000

It's user mode compatible with the M68K instruction set according to Motorola.
They also mention compatiblity with existing 68040 development tools such
as compilers and debuggers.

>* about 3 times faster than the 68060!"

That's most definitely not correct.

> ------------------------
> ANDREAS KROMKE

Hi Andreas.

I use Ease too and like it for it's user-friendliness rather than it's features
(although it has a good few of those too).

What would be a better shell? I have used Neodesk and it is too slow and buggy,
Gemini is excellent but my German iss not good enough to get the best from it,
and I am not sure I like Magxdesk <sigh>.

Don't like Thing much and I don't have the english rsc.

Where to now?

From: richardw@dma.org
Message-ID: <4h5pdn$b2g@sally.dma.org>
Source record: 149437

If all possible can you PLEASE respond via e-mail because I don't get on here often and I may miss the message. Thank-you in advance.

I have two Atari ST computers, one being the STf and the other being the STe. They both work great except the STe. For some reason the serial port now sends a signal to the modem saying it is online when in fact it isn't. It worked great a few days ago, but now it doesn't. I first thought it was the other ports that were also screwed up, but the hard drive, printer, second disk drive, monitor, and even the computer work great. It is just the serial port. Please help me on this, I sent a message to info@toad.net about them fixing it plus adding the high speed modification to it (making it go up to 57,600 BPS). I just want to know what it could be before I ship it out to them.

Thank-you very much!

Richard Wegner

I only used it once many years ago but iirc it doesn't do it
automatically.

>I've got MWC in dir c:\ohjelmoi.nti\mwc, but the paths in profile
>point to c:\lib etc. I corrected them manually, but cc still doesn't
>seem to find cc0! (It's pretty stupid the cc doesn't SAY it can't find
>it -- it just doesn't do anything! And the same goes for msh for not
>telling the user if it doesn't recognise a command...) I can compile
>small test programs by copying all the files needed for compiling to
>the same dir, but that's not very beautiful...

These all need to be set. I forgot they were omitted from my profile
as I plonked them into MagiC's environment ...

```
setenv PATH=.cmd,,e:\bin,e:\lib,e:\usr\bin,c:\utility
setenv LIBPATH=e:\lib
setenv SUFF=,.prg,.ttp,.tos
setenv INCDIR=e:\inc
setenv TMPDIR=i:\tmp
```

TMPDIR is very important and probably explains why msh is misbehaving.
Come to think of it, it may explain why it is failing to run your
profile. Set up TMPDIR and PATH *very* early in your profile.

Your path would be ...

```
setenv PATH=.cmd,,c:\ohjelmoi.nti\mwc\bin,c:\ohjelmoi.nti\mwc\lib
-search in msh for .bin (wired in) then .cmd (your internal commands)
then in the current working directory then in xxx\mwc\bin then
xxx\mwc\lib

setenv LIBPATH=c:\ohjelmoi.nti\mwc\lib
-for libc.a crts0.o et cetera.

setenv SUFF=,.prg,.ttp,.tos
-executable extenders.

setenv INCDIR=c:\ohjelmoi.nti\mwc\include
-include files. Sadly, I have discovered that this can contain only a
single path.
```

Ease is junk. Why the hell it was bundled with MagiCMac (which has a
much less able version of MagXDesk) I've no idea.

I understand that there will soon be a version of NeoDesk 4 that
works with MagiCMac :-)

> confusion. The garage sale box consisted of: two 520STs, one SC1224 monitor,
> two SF354 disk drives, one SF314 disk drive, and all of the cables and power
The SF354's are single-sided, and the SF314 is double-sided. The cable
goes from the ST to the "in" socket on the disk drive. Another drive can
be added, connecting to the 'out" socket. This would be drive B. you can
only connect two at a time. use the double-sided, and save yourself some
grief.

The RCA jack must connect to a computer game-type switch box, which then
goes to a VCR or tv as channel 3 or 4 (it varies from location to
location). The tv reception is not great; pretty lo-rez, and the
computer interferes with tv reception.

I'm trying to connect a Canon IX-12F scanner (with a Navarone cartridge) to my Mega/STE (TOS 2.05/4MB RAM). My problem is that I have _NO_ documentation or drivers for the scanner. Does anyone know of where I can obtain such a driver? Also, what kind of software is available to use this scanner? I've heard mention of a product called "CD Tools" (from Hard & Soft, if I remember correctly) but know nothing about it.

On another thread, what exactly does the navarone cartridge do? Is it a specific interface to _this_ scanner or a generic interface to other devices? Anyone know where I can get more info on it?

TIA,
-Jason

4248. STReport #1207

Newsgroup: comp.sys.atari.st
Date: 1996-03-01 00:00:00 UTC
From: tderrick@acpu.com
Message-ID: <960301140010284 21@acpu.com>
Source record: 149453

(Rich aka Captain Blade) spake thusly:

RA> Inquiring minds want to know: Is Ralphie still associated
RA> with ST Report in any way, shape, or form?

I want to know.

Unfortunately, the most recent ST Report I saw featured Ralph
trashing the Jaguar. His opinions may be correct - but they are not
welcome. Nor is he.

"The Poor Deluded Soul" - tderrick@acpu.com

... I don't have a solution but I admire the problem.
___ Mountain Reader II - #00000077

4249. Atari World 11 in Sheffield

Newsgroup: comp.sys.atari.st
Date: 1996-03-01 00:00:00 UTC
From: mike@coconut.demon.co.uk
Message-ID: <825791008_OASIS_@coconut.demon.co.uk>
Source record: 149504

Atari World 11 arrived by mail at my den at 7.30 am on Friday morning.
Not so good paper quality, but still very readable and some interesting
articles.

Reading the posting from the gentleman in Dublin, I can see his point in
that if we all subscribe, there will be less and less reason for newsagents
to stock the magazine anyway. And if it's not on the shelves, then new
Atari owners will only have ST Format (if they are lucky), and that's not
exactly a shining example of what an Atari magazine should be. No offence
to the editor and staff, but the cover price is a disgrace for what is
offered. I have to wonder if there is a hidden agenda in this case.

But back to AW who do get more money from the magazine if we subscribe.
Unfortunately, not everyone has access to the 'net or local Atari BBS's, so
they can't be told how to subscribe. All we can do is tell any Atari owners
we know to subscribe or buy the magazine. As I would hate to see it go, as
there is no real alternative. ST Applications has yet to produce it's
promised 32 page A5 printed magazine, and I think they are going to have a
bit of a job to try and regain some of respect they had before going into
HTML magazine publishing, which was overwhelmingly disliked!

Enough... time for a cup of tea and a proper read of AW11 :-)

ATBeST
Mike

4251. Where to buy FALCON by mail-order in Europe?

Newsgroup: comp.sys.atari.st
Date: 1996-03-01 00:00:00 UTC
From: Ivan Shevchuk <ivan@lutsynod.freenet.kiev.ua>
Message-ID: <AHMLIDnmM4@lutsynod.freenet.kiev.ua>
Source record: 149506

Hi!
I'm going to buy Falcon for Cubase Aydio but I live in Ukraina and there is no ATARI/C-LAB dealers/resellers etc.
Does anybody now good mail-order specialists on Falcon in Europe? (address, e-mail, tel., please).
Thank you in advance,

Ivan Shevchuk.

Gary Priest (gary@the-gap.demon.co.uk) wrote:
: I think I'll send it back for a refund. I was under the impression Magic4
: and Ease4 were designed to complement each other! And not being able to

No, Ease works fine with MagiC 2. For MagiC 3 or 4 you should use a more
modern shell. This will be even more important for the next version of
MagiC that will include an extended DOS-XFS with long filename support,
compatible to Windows95.

>
>*steve

Ok, this is from another account, just to avoid confusion... :)

These are the games:

Populous I
Populous II
AD&D Hillsfar
North And South
Gauntlet
Phantasie
Phantasie II
Phantasie III
Sky Chase
Roadwar Europa
Gunship
Hostages
Blood Money
Crack Down
Paradox
Supercars
Roadwar 2000
Thunder Blade
Terrorpods
Stryx
Battle Chess
Sundog
Prince
Alien Fires
Barbarian
Oids
The Pawn
Space Ace

Pirates
Typhoon Thompson
Temple of Apshai
The Bard's Tale
BattleTech
Hitchhiker's Guide to the Galaxy
Dungeon Master
SpeedBall
Space Quest
Shufflepuck Cafe
Safari Guns
The Running Man
The rocket Ranger
Renegade
Soldier 2000
William Tell
Sword of Kadash
Defender of the Crown
I Ludicrus
Demon's Winter
F40 Pursuit
Galdregons Domain
Times of Lore
Kult
Artura
Bad Company
Barbarian II
Autoduel
Nine Princes in Amber
Leisure Suit Larry in the...
Battlehawks 1942
Bride of the Robot
Chessmaster 2000
War in Middle Earth
Warlocks Quest
SkyFox
Deathsword
RoadRaider
TV Sports Football
Basketball
Empire
Rogue
Dragon's Breath
Legend of William Tell
Wizards Crown

So there are 72 games in all, I cannot guarantee any of them working since I have not tested them. All of this stuff was extra junk given to me when I bought a TT system from a friend. The 520STfm works fine and is in excellent shape and so is the monitor.

I don't want to split up the system... nor the games, I just want them out of my hair, house and mind!@!@@!@!

$80+ shipping!!!

Buy it!

If you want it reply by email to

smiller@farad.elee.calpoly.edu

HAAALLLPPPP!!!

As you can tell, this is a message borne of frustration. I have this old Seagate 277n HDrive that is probably dying after nearly ten years of loyal service.

It is the first in a chain (dev 0:0) followed by a Supra running a Quantum 105 (dev 0:1)

Most of the rpoblems with the Seagate could probably be solved with a re-formatting, however. I've been unable to make it happen. Every time I clean it off and atempt to reformat, I get a hard time from the Utilities. NOBODY seems willing to format this drive! HDX from ATARI tells me that the drive is already formatted with a previous version of HDX and therefore must be re-formatted! What sort of ambiguous Catch-22 error message is that? I thought HDX 6.x was supposed to be pretty clean by now!

None of my other HD Formatters (SUPRA and BMS) will allow me to exceed the 16meg limits so they are probably suffering from old age, but I DID originally format both drives and partitioned to 32k!

Just a thought. Although until recently (for about 5 years!) I have had no problems, is it possible I have a problem with the DIP settings or the Terminator Packs?

I've always thought of myself as a pretty cool ATARI Programmer and Hardware innovator, but this problem has got me stumped.

Source record: 149515

and@sun1 (Andreas Kromke) spake thusly:

AK> Why do you want to use Ease ? It is the only shell that cannot
AK> work optimally with MagiC 3 oder MagiC 4.

Whoops! Hold the phone, there. It may have something to do with the fact that Toad is advertising Ease as *the* desktop to use with MagiC. I could quote their catalog at length, wherein they rhapsodize about the wonders of the MagiC/Ease combination. Is this not correct? For as long as I have been hearing about MagiC, the Ease desktop has been associated with it.

This is not an idle question, as I may be buying MagiC4 soon. What would you recommend? Thing? NeoDesk? Other? I am told that you really need a desktop replacement under MagiC, since the TOS desktop is gone.

Jyri-Pekka Hovila (jhovila@muikku.jmp.fi) wrote:
: : What kind of a moron is posting this kind of crap!!!!
:
: It's me, Jyri Hovila, Kuopio, Finland. We've been writing to each other
: every now and then.
:
: : Last week someone does a similar thing- twice. And now another idiot comes
: : along posting even more huge UUencoded messages here. I should think that
: : those angry followups (from me as among others) would have scared away any
: : more attempts.... obviously not (or this person doesn't read news).
:
: : Are you aware of the fact that some people actually have to pay for the
: : mail/news they receive? Not everybody has free/unlimited Internet access
: : through university, work or whatever.
:
: : I for one use an offliner to pick up all my mail and subscribed newsgroups-
: : this particular download took 4 to 5 times the time it usually takes to
: : download. I'm getting pretty tired of this crap!!
:
: : But instead of just complaining- does anyone have any suggestions to how we
: : can stop these kind of things happening- in a civilized manner? (I'm
: : awfully tempted to 'mail bomb' this guy with Megabytes of mail but....).
:
: I've got one. Stop flaming. There are zillions of people like me who are
: more or less new to the Net and Usenet, and are not fully aware of the
: proper manners. I recently posted by accident an article to a wrong
: group, and received a friendly, very informative mail where I was told
: for what kinds of postings the group is for. There was also a FAQ of the
: most "popular" questions on the group. Send a friendly mail like the one
: I received to those who haven't got as good knowlegde of the group as you
: do, and ask them to store the mail and send it on if they bump into a
: similar case. Also, you could post an article for the new users to
: the group once or twice a month.

I agree on you. Being rude, even nasty, doesn't solve anything. We all
have to learn some things head over heels, and at least I thought we
Atari-users had more sense in our heads than to call our fellow-Atarians
"idiots" !

: One thing I can't understand is that yet we have "talked" to each other
: several times, you seem to be ready to send me to the deepest hell for
: just one slight mistake. Actually it's quite frightening. I'd be happier
: if I could trust on the people I'm in touch with. This kind of short
: nerve flaming is really frightening.

You're right here, too. I've heard some interesting things about how easy it is to insult people on the "Net", as they are only text, not living, feeling (!) beings, on our screens. Some people prefer to yell in "real life", too, but I haven't ever considered that either polite, or civilized! Things can be said nicely, too...

: : inexcusable- so DON'T DO IT ANY MORE!!!!!!!!!
:
: How would you feel if you moved to a foreign country, met a lot of nice
: people there, but one day the police came and arrested you and you'd be
: put to jail for 15 years because you used the word "smile" -- nobody just
: hadn't told you that using it is absolutely, completely inexcusable? You
: HAVE to make the rules clear before starting to flame people this way!
: There will be many new users on this group too who are not familiar with
: the rules of it. Please be patient with them! I will now start assembling
: some kind of a FAQ about this group, and I hope it will be passed on to
: all the new people coming here.

Well, people are people. Some people hit first, listen only after that. Some people don't listen at all. I think you handled this well, and have nothing to be shamed of. Sigh... I hoped we Atari-users weren't the kind to attack each others. It seems I was wrong, though I do understand the reasons behind their anger. I pay for my Internet access, too - but it's not a reason to be nasty!

:
: **********
: Once more: * I'm sorry! *
: **********
:
:
: Wish you and everyone else all the best!

To you, too =) !

4265. HD Driver and DOS?

Newsgroup: comp.sys.atari.st
Date: 1996-03-02 00:00:00 UTC
From: mfeaver@s3.sonnet.com
Message-ID: <4h8l6r$38q@sonnet1.sonnet.com>
Source record: 149520

I just received HD Driver from Toad. Their ad states it has the ability to read/write DOS partitions. Couldn't find any specific details in the manual on how the drive should be formatted or partitioned.

Do I format the drive (EZ135) on the PC, and if so, what parameters or details. Will the Atari and HD Driver be able to read it and write to it? Want to transfer files back and forth.

Or do I format with ICD Link 2 software, and partition it with HD Driver, and if so, what parameters need to be set so the PC can read/write to it? PC allows logical sectors larger than 1024 bytes (2 512 byte sectors).

Or do I just 'experiment' until I find the right (if any) combination?!!

Lastly: HD Driver says 'bus arbitration' can be used to have two computers connected to one SCSI drive. Says that they can't access the same partition though? Is it really true that I could connect the PC and the Atari to my Syquest EZ135 at the same time? Where would termination if any go? Adaptec SCSI host card will be used in the PC. ICD Link 2 from the Atari. If the system won't 'smoke' when both computers are connected to EZdrive, and if only one computer 'accesses' the same partition at a time, is it possible to share the partition? (to transfer files)

I could really use some detailed help on this one! Hope I haven't been too verbose. Stuck in Stockton!!

>Hi,
> So Issue 11 is it out? It says Feb 10th in issue 10 but still
> absolutely nothing, does anyone know if it's available yet? TIA for
> any help.

Subscription issue arrived here this am.
And it claims 15th march for issue 12! <G>

Some big changes, crappy paper quality but it feels and is BIG.
96 pages long , a good read, gets my vote even if its timed by almanac
rather than chronograph! The mag itself is great, both editorial and
features, it's such a shame that such shoddy timekeeping will drive
readers away in despair. Even I started thinking maybe it had gone the
way of all the others.

Still, they've taken on Kev Beardsworth (FFF)as staff writer so they must
be optimistic as to the mags future, medium term.

At least with a subscription you dont have to hound your newsagent
daily to make sure you are the one to spot one of the only two copies
in Kendal !

Cheers..........David G

This wasn't true for me, I had 4 32 meg partitions & 2 smaller
partitions on my HD before I upgraded to HD from ICD and all worked
fine, I think i selected ICD formating too but seeing as it was 4
years ago I'm not too sure!

Hi Ryan,

Both Apex Media for the Falcon and AutoDesk Animator for the PC
can handle that file format. Each will output and FL* type file.

Mike

4270. HELP! What is TOS error # 6

Newsgroup: comp.sys.atari.st
Date: 1996-03-02 00:00:00 UTC
From: pnf@dana.ucc.nau.edu
Message-ID: <4h9351$poh@ruby.ucc.nau.edu>
Source record: 149525

Hello all,

I just bought a used copy of Digidesigns' Sound Designer for the atari.
I'm using a 1040 ste with 4 megs .When I tell the prg to load a sample
from my eps 16+ it starts everything o.k. retrieves the sample and then
starts to write it to the floppy on the ste. Then it stops and gives me
the message " TOS error #6 and crashes.
What is TOS error #6 ? Is there anything that I can do to work around
this ?

HELP !!!!!! Please.

-ARIK- Implosion Studios at pnf@dana.ucc.nau.edu

>docs for your local Man! I got my v1.0 last month.

I take it this version isn't shareware then ?? I had some real
pain-in-the-ass problwms with .59 so I'm not registering that, so if
this is registered only, then there is no way for me to get it ! (BTW:
if it has the same problem as .59 then I don't really want it !).

I think there is a german version of Thing 1 out there, it just
appears that the enlish verion is registered only !

2 things:

1) Most people haven't got access to Oasis 2, so your point is a
little redundent at the moment.

2) In a group like this it would be a bit of a pain to select each
week the 450 of 460 artcicles, just 'cause 10 are too big, its much
easier to just get them all, and probably cheaper than having to
investigate each article online !

other than that, I agree that most newsreaders have, but I feel its
only of use in limited circumstances, like comp.binaries.atari.st on a
good day !

Just a suggestion, hows about getting all the netiquete bits of usenet and puuting them in one smallish <100K file and sticking it on an FTP server, then posting an article acouple of times a week, subject: NEW USERS READ THIS - NOW !!!!

an in this article, a VERY Small :

PLEASE DOWNLOAD THE blahblah FILE FROM FTP.SOMEFTP.PLACE \atari\net\newusers.zip

and thats it, acouple of bytes, that posted once a week, would be hopeful;ly read by newusers so that they don't dump huge articles on us every second.

From: jrobards@world.std.com
Message-ID: <jrobards-0203961345080001@192.0.2.1>
Source record: 149530

I was more or less wiped out by a computer virus on my 1040 ST some time ago. At random intervals it will destroy the directory on a floppy. It also adds code to the end of file whose lengths are known (so I know that something isn't right).

I am currently left with a large number of disks that I can not say are clean. Is there a ST anti-virus program that really works? I am now also using a Mac and there are industrial strength programs for this task on that platform.

I have UVK for the ST but it is a joke. It does tell me when the system disk I/O vectors have been changed (always a bad sign) but that's it. It never finds a virus. HELP!

4277. For sale - TT's, video cards

Newsgroup: comp.sys.atari.st
Date: 1996-03-02 00:00:00 UTC
From: sirsmedley@delphi.com
Message-ID: <JZDJ7tN.sirsmedley@delphi.com>
Source record: 149532

FOR SALE - Two Atari TT030 computers

Both have:
4 megs ST RAM
TOS 3.06
720K floppy drives
modified parallel port driver hardware
(for longer transmission distance)

One machine is full US spec, and has a 60 meg hard drive.
The motherboard is revision H, for those who care.

The other is UK spec (UK ROMS & heyboard) with a US power supply.
It has a 120 meg hard drive. (I made sure this machine had the
larger hard drive to offset the minor inconveniance of the UK
keyboard.) The motherboard on this one is revision J.

Since both machines already have TOS 3.06, you only need a new
floppy mechanism and controller chip to upgrade to 1.44 meg. I
never bothered to upgrade the floppy because I hardly ever use
floppies.

PRICE - $450.00 each (including shipping in the "lower" 48 states)

I also have three AlberTT 1.2 video cards. They support one video
mode, 1024x768 with 16 colors, but it sure beats the TT medium
resolution of 640x480 with 16 colors! (You will need a monitor
that can support this resolution at a 48 Khz horizontal scan rate
to use this card.)

Price - $110.00 each (including shipping)

For one of the TT's and a video card, the price is $525.00,
including shipping.

Any questions? Contact me via e-mail at sirsmedley@delphi.com

Well, if that's the case, I think it must mean that they have gone under. I
haven't bought an STF in a while. It is too dear for too little. It used to
be so good as well.

Oh well. Thank god I'm online!

Steph.

4281. HELP! Mint, lynx, Chimera, ftp, blah!

Newsgroup: comp.sys.atari.st
Date: 1996-03-02 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4h8sr2$erg@madeline.INS.CWRU.Edu>
Source record: 149536

Can someone please help?
I have been trying for weeks now to get a set of net
programs working under mint and minixfs, with almost no luck
at all! First I tried MKD, and that was a total bust.
Then I managed to wade thru KGMD, German and all. (I studied
German many years ago, but there was no computerese then.)
With the help of Ruftrade, (which doesn't understand
umlauts written as ae, oe, or ue) and□nd a good technical
dictionary, I got it loaded. Took 42 MEG of disk space, and
a knowledge of Unix far greater than I possess! And of course
it didn't really have any useful net stuff in it that I could find.
It is probably there , just buried.
So next I tried TAF, which I got from HENSA. Now this
supposedly has Chimera, ftp and telnet in it. But it only
runs on ppp, at least without major surgery.
So I pulled down dip, which I later found was already in
there, and wrote a script. Now my server is a static SLIP,
without compression. All the info I could get said to change
host and hostname for my server. When I did that, dip wouldn't
run! I reloaded TAF, left host and hostname alone, and MAGIC!!!
dip ran and connected me to my server!!??
Before I ran dip, Chimera came up just fine, loading
the local home page for Toronto Atari Fed. But when I ran dip,
It told me it couldn't find Chimera??? When connected, I could
connect with FTP to several sites, including my own VAX
back at the Univ. When I tried to download files from any place
it told me "permission denied".□, and wouldn't download,
anything! I could run telnet! But the bloody telnet emulator is
so primitive, I can't do much except connect to freenet at the
CWRU.edu. And I can dial freenet directly from Cleveland here
with uniterm. Without mint. So I got the new LYNX 2.4 for 68000.
I moved the lynx.cfg file where it belonged, and tried it.
When I was in local mode, i.e. no dip, it would load local files,
but wouldn't get the html files translated, and all I got
was a string of text, no separators, no lf/cr, nothing. But
at least it ran. As soon as I ran dip to connect to the server
when I ran lynx, it gave me an out of memory message.
Now I don't have a tt with 76 million meg,
but I do have a 4 MB 1040 with a 16 MHz accelerator. A 68000
in a 1040 can't have more than 4 MB!! What good is a
68000 Lynx that can't run in 4 MB?
So now I still have no network in my MiNT st after weeks
of work. Does anyone have any valid ideas? Has anyone

written a useful manual for beginners on this stupid OS?
I have e-mailed to TAF with nary an answer.
If there is some Maven out there that I can call and talk
to or who has time to correspond e-mail who knows what he/she
is talking about, I would Love to hear from you.

PLEEZ, somebody HELP??? :(

Boris D. Cahan
bdc2@po.cwru.edu

P.S. I got cab for mint, too, and when I tried to run it, it
told me I needed HTML.APP. What the hell and/or where in hell
is that?
B.

4282. FS: (2) 520STs, (1) SF314, (1) SF354 etc

Newsgroup: comp.sys.atari.st
Date: 1996-03-02 00:00:00 UTC
From: smiller@farad.elee.calpoly.edu
Message-ID: <4h8s06$coe@isnews.csc.calpoly.edu>
Source record: 149537

OK, I apologize to everyone in this group for so many FS posts from me :)
To explain... I bought a complete TT system to replace my TT back in
December, all I wanted was the RAM and the graphics card but I got all
this other junk with it...

So far I have sold:
Le Redacteur
PageStream 2.2
Both Monochrome Monitors
First Graph
TOS dev. Kit
Double disk drive setup

But I still have:

(2) 520 STs - ($30 apiece w/shipping)both work, one is missing capslock key
from the keyboard
(1) SF 314 - (make offer w/shipping) I thought it didn't work, but I just
put the cord into the wrong plug
(1) SF354 - (make offer w/shipping) see above
(1) dead SF354 - (make offer)

Warp 9 - with docs $5
Geneva 1.0 / Neodesk 3.04 with docs $25
Diamond Edge - with docs $10
G+ Plus - with docs $5
Universal Item Selector -with docs ($5)
Hot Wire - with docs $5
Wordperfect - no docs $10
Xboot - with docs $5
Lattice C 3.04.01 - no docs $5
Circuit Maker - with docs (this is a digital circuit emulator, works
in ST hi and med on a TT too) - $20

OK, I think that's it... I again apologize for spamming the group so much
with this crap, and I apologize to people who have wanted something and I
screwed up on the status of a sale. Another note for the guy who wanted
the SF314, *it does work*so if you want it you have first dibs.

I know I may have screwed up royally here, but hey... I have been using a
TT for four years and I have not messed with any of these other Atari's
in a long time...

Also see other post about a 520STfm w/color monitor and 72 games for $80
+ shipping.

*steve

> Maybe a thought?

Yes, a feature like this would be nice, but I don't understand that this
has anything to do with the offliner itself (as it's only a reader)- that
is unless your offline reader does the downloading itself.

My setup is a Unix shell type thing. I download/upload SOUP packets, and
when I've received the package I read the messages with Okami on my STE.

Perhaps 'olbatch' in Unix has features that will filter out large messages.
I haven't heard anything about this, but I'll try to check it out.
Thanks for bringing it up!

: however I'd like to hear what it is about HD Driver that made ICD users
: migrate?
I never used ICD on my system, but from using my boss' computer I
can tell you that using HDDriver is faster, allows a lot of things that
ICD doesn't (like background file operations with MagiC), and has
features that may, one day be put into ICD. I'd recommend looking into
it. There are things about it, that would just knock your socks off!

PH> modifications to the system. <<

I can confirm that the TOS 2.06 upgrade does work with TOS 1.02. I have had the upgrade installed since it became available and had no problems with the installation procedure apart from when it came to replacing the case and keyboard. Because of the position of the original TOS the keyboard would not fit over the upgrade so I just extended the keyboard lead and had it separate from the main case. This is not the case with all Atari motherboard configurations.

I have bought a PC now so the upgrade is up for grabs if anyone would like to make an offer.

Steve.

d> Yeah, I agree. Give the poor bugger a break, I've been where he is and
d> had to rely on help from others (thanks y'all).

I was annoyed as much as Hallvard, but I asked myself one question: should Jyri (or anyone) know better?

This newsgroup has no FAQ being distributed stating the purpose of this conference and the conventions. If we don't tell anyone any different how should they know? So I think it's partly our fault.

Does anyone have the old atari.st faq to update and repost? I've lost mine. I've also lost the faq for the atari platform itself - any idea where I can find it? No http sites becase I don't have access, but an ftp site would be fine for me.

There is a genlock called the JRI GENLOCK for the MEGA ST series, I have one
in mine. It allows for chromakeying and also just for video out to TV. I use
both RGB and TV at same time. Has SVHS IN AND OUT and Composite. It has
internal fan etc.... Nice little bit of hardware. Just use it hooked to TV as
game now though.

Martin.Byttebier@ping.be "Martin Byttebier" writes:

>
> Common you Mint guys/girls help us so we can use these things.

Yaaaawn ... Who dares to disturb our holy sleep ... :-]

But seriously :

I've got a working PPP Connection under Mint-Net; I use it for 'lynx',
the text based WWW browser, and IRC. I didn't work with CAB yet, because
lynx seems to be a lot more stable.

The steps are:

- HSMODEM in AUTO folder (read Mans for details)
- mint.prg in AUTO folder (to be loaded after HSMODEM)
- mint.cfg in boot root
- create unixlike file tree (some folder that contains folders
bin, etc, var, var/adm, usr, usr/lib at least); MintNet software
usually expect that
- edit mint.cfg, link all folders in folder unixlike to U: (so that
you get u:\bin, u:\etc etc. :-)
- set environment in mint.cfg and start syslog from there (MintNet
proggies send all their messages not directly to the screen but to
the background 'demon' syslog, which reads the file u:\etc\syslog.conf
to see where to put them). If you don't get syslog separately, pick it
from MiNTos
- environment should consist at least of PATH, TMP/TMPDIR/TEMP, SHELL
(set to whatever shell you want to call for script execution) and
UNIXMODE (set to at least /rU)
- Install MintNet, folder 'mint' on boot root (need only SLIP Driver)
- Install the ppp elements properly (get ppp-212)
- there are two possibilities: let mint.cnf do the complete setup of
the connection OR call a shell script (of course with a shell) to
set your PPP connection later. I recommend using a shell script
- write shell script. Here excerpts of mine:

```
#
echo Configuring net ...
/etc/ifconfig.ttp lo0 addr 127.0.0.1 up
#
echo Setting up port ...
#
/bin/stty.ttp 19200 -tostop
```

```
#
echo Dialing ...
if (/etc/chat.ttp -v ABORT BUSY "" atdt{mynumber} CONNECT "" ogin: {myusername} assword:
{mypassword}) </dev/modem1 >/dev/modem1
then
/etc/pppd.ttp /dev/modem1
else
echo "No Line on {mynumber}"
fi
```

- pppd reads u:\etc\ppp\options, so edit this to your needs
- start shell - from mint.cnf with INIT=... or from GEM
- start script (enter the name of it) and pray

After that, you should have a working connection and be able to start any client like lynx (TOS based) or CAB (GEM based, with the proper .OVL for MintNet)

I recommend to read/learn more about Unix conventions, because Mint was obviously developed to make ports from the huge Unix software pool easier.

It's possible to run everything from a plain TOS filesystem. When installing files with long names they just get truncated; same happens when read by applications. No problems as long as names are at least unique.
I renamed all extensionless executables from packages to .ttp for compatibility reasons.

All files used in the script should have been in the packages. Maybe you need the Mint Utilities in addition (stty is in there)

Well, so far a tour de force into the secret land of Mint. Most certainly more questions will arise, but remember: you are not alone ...

Screen updates might be slower because there is more of the screen to
paint, but in general the computer runs faster when you have a video
card because it uses videoram and so screen refresh doesn't tie up
the bus (as it does on the Falcon, but not to a significant extent
on the standard ST).

4298. Help stop me buying a Mac for music apps.

Source record: 149553

I am about to plunge into the world of Mac. I want to upgrade to work with such things as sample editing, hard disc recording and high end score writing. The Falcon sounds tempting but is nearly the same price as a power mac 7200 which has 8 megs ram, 500 meg internal HD. The power mac has a chip of some kind which, like the Falcon, makes the purchase of expensive sound cards unnecessary. The fact that Mac is so much more widely used makes the movement from home to studio less hassle. Also the unlimited expansion potential of Mac is a selling point. I have been very content with my atari st using cubase and an M1 but feel that if I am going to invest some fairly big money I should think carefully. If anyone can give me some good reasons to stay with Atari or C Lab I'd much appreciate it.

Probably because Geralphie has never had any credibility either as a
journalist or businessman. There are many people around who well remember
what an asshole Mariano was to Atari users, what with his constant
predictions of imminent corporate death; the conspiracies against the
userbase; and his allegedly shady dealings with customers. For those
very good reasons, nothing coming from his keyboard is worth the phosphor
it's lit up on.

hsideras@mettav.demon.co.uk (Harry Sideras) said:-

>I was annoyed as much as Hallvard, but I asked myself one question: should
>Jyri (or anyone) know better?

Maybe not, but in my case I just took the area for a week or so before
responding. In that week, just by simple observation, I learnt that posting
binaries in this area and most others was not allowed/frowned upon/big
no-no. I learnt other things as well, like much of the abuse is usually
good-natured stuff between friends, and not to write a response without
looking at the whole thread.

>This newsgroup has no FAQ being distributed stating the purpose of this
>conference and the conventions. If we don't tell anyone any different how
>should they know? So I think it's partly our fault.

Maybe it is, but do newbies actually know where to go for FAQ, or even what
they are? I had an idea about netiquette because a friend told me most of
the important things, but I was lucky.

>Does anyone have the old atari.st faq to update and repost? I've lost mine.
>I've also lost the faq for the atari platform itself - any idea where I can

>meg) because cab crashes, I want to go get it FTP. So I try FTPing to
>www.xxx.xxx and it wont let me login anonymous.
>
>Is there a way to do this? How does a browser do it?
>
>At work with netscape sometime I notice it says ftp://xxx.xxx.xxx/filename
>Other times it does not it says http://xxx.xxx.xxx/filename
>How does this work?

If the URL starts http:// it means that the file should be transfered with
the Hyper-Text Transfer Protocol. ie - it means that it should be transfered
as a www page. This is how CAB transfers files.

if the URL starts ftp:// it means that the file should be transfered with
the File Transfer Protocol - suprise, suprise, this is what FTP uses. The
two protocols are not the same. Netscape can cope with FTP links, but IIRC
CAB does not yet support FTP. (I dont have online Atari access, so cannot
be sure...)

So... if the link says 'ftp://...' which is allowable under Netscape then
yes, you can use FTP to transfer it. However, many pages (some of mine
included) use lines starting 'http://...` and cannot be accessed via FTP
(AFAIK).

Hope this is of some help...

You coud just try "single tasking TOS"

Another way is calling the single tasking TOS just TOS and calling MultoTOS MultiTOS. This might confuse some DAUs but They can-t say it's wrong...

Christof

4309. Single/Mono/Uni TOS?

Newsgroup: comp.sys.atari.st
Date: 1996-03-04 00:00:00 UTC
From: gmiller@inca.co.nz
Message-ID: <4hf3nt$3gs@inca01.inca.co.nz>
Source record: 149564
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

Over the last few years, while writing documentation for custom ST/TT applications I have written, I've needed to describe the various versions of TOS that they (the apps) were designed for.

Up to a few years ago, all versions of TOS were single-tasking, so simply saying TOS x.xx was OK.

With the introduction of MultiTOS, I struck a problem.

Some apps are better suited to a multitasking environment (a background disc formatter/disc copier, for example, that I have written, and will be ready for wide beta/gamma testing soon)

MultiTOS obviously implys a multitasking version of TOS. But how then does one refer to a single-tasking TOS?

Reading the Atari newsgroups, it appears that the default name for it is "single TOS". But that doesn't roll off the tongue quite as well as it could (read: it doesn't quite sound right). I guess that I may have missed a discussion that eventually settled on using "Single TOS".

I have started using the phrase "Mono TOS". Some have even suggested to me that it might be better calling it something else, as it can be confused with "monochrome" TOS. Also, certain persons (PSD in c.s.a.a) would probably be able to come up with a few sharp-tongued rephrasings of "MonoTOS".

"Uni-TOS" is a variant that might have some possibilities. Although that too has possibilities for denigration.

I am therefore looking for ideas on how one can describe a single-tasking OS version.

So, consider this article as a trawl for ideas to call single tasking TOS. (Rude or insulting comments can be sent to /dev/null)

According to Toad, it's in the process of translation.

>
>ATB, Frank - STF Tech Editor.

Hi Frank

Before I start my grumble..... I am NOT criticising the editorial content of the magazine generally.

My main reason for not buying the magazine is mainly due to the excessive cover price for what is offered. Take away the adverts and the editorial content is not worth the asking price at all.

I know the editorial page count is very dependent on advertising revenue (I know this because I am the publisher/joint editor of a monthly magazine for the UK radio industry). My page count only goes up when there is extra advertising or subscription revenue.

But at least I make my magazine available on subscription to EVERYONE, new readers and existing readers alike. We also offer three, six and twelve-month terms, so that all budgets are catered for.

I used to be a subscriber to STF for a couple of years, but as the type of the editorial changed towards the beginner and games-player I let my sub run out and only bought single copies as and when there was something of interest.

My next encounter with an STF subscription was when my ST Review sub was transferred without my knowledge or permission to your company. There were only two issues outstanding before my sub ran out, and I simply wasn't impressed by your magazine's coverage at that time.

Since then I have bought the occasional copy whenever I saw it, but now it is just about impossible to pick it up locally. I saw last month's issue in WHS and was going to buy it, but when I saw the cover price and the slimness of the magazine, decided against it.

Sorry, but I simply don't think STF is at all value for money anymore. Without getting into a slagging match, which would do no-one any good at all, I think AW offers better value for money overall. Even if their paper quality has gone down, at least the editorial content is high and their subscription terms are easy and good value.

As for the hidden agenda, well I could well be very wrong, but not making subscriptions available to new readers is surely one of the last nails in the coffin? And not exactly forward-thinking! (I have just seen your posting in another thread re subs, but as I haven't seen other postings re this, perhaps you could put me straight on your current subs policy)

It's a shame as STF was the very first magazine I ever bought - issue 5, and I still have all the cover disks from then until issue 53, plus some after that.

I sincerely hope you can make STF into a better magazine. At one time in the past I was able to buy and read four decent ST magazines every month, I'd be happy to buy that number again!

Seriously ATB

4313. FS - Why not use country code?

Newsgroup: comp.sys.atari.st
Date: 1996-03-04 00:00:00 UTC
From: mike@coconut.demon.co.uk
Message-ID: <826042798_OASIS_@coconut.demon.co.uk>
Source record: 149568

Just a very simple suggestion from me, and I know others have had similar thoughts and I suggest this in the nicest possible way :-)

If you are selling anything Atari, why not put your country (UK, USA etc) in the subject line. I have lost count of the times I have gone to a posting only to find at the end that the person is in the USA, and usually doesn't want to ship outside the states :-(

It would save a load of hassle for all concerned, and in the near future when we can pick what we want downloading by the headers, it could save time online.

I am sure it will be a good thing for all.

> be so good as well.

I agree. I used to get told off for reading it in class when I was at school! You see, I'm not just jumping on the bandwagon of people slagging STF - I fully admit I used to LOVE it, but now, it's pretty embarrassing on the whole.

So the Atari market has shrunk, I can't deny that. However, contrast STF with Atari World - the latter is far more enthusiastic about the platform, because it's written by many people who love their Ataris and use them regularly to great satisfaction. STF just doesn't seem to show that kind of spirit - and in my opinion it started to lose it when Paula Richards became editor. Who was the last editor of STF to actually own and use an ST anyway??

If you look closer you'll see that the paper quality is actually not crappy - it just lacks the gloss and is in fact, whiter than the old stuff. At least the design and layout (and more importantly, editorial content!) is of the same high standard.

I think they may need to change some of the colours used to suit the new paper though - some bits don't look too clear.

>
>No good fer newsgroups?

I have no idea about how the setup is at demon, but if you're able to get SOUP (Simple Offline Usenet Packet) format packets Okami will work just fine. Okami also works with UUCP and the German Maus network, but I don't know anything about how to set that up.
Okami is excellent for both news and mail!

I use a VT-100 terminal emulator to get online (Connect to be exact) and when online I work within Unix. What I do is enter the 'olbatch' command which is a command for offline usage.
What it does is collect all my news or mail together, compresses it using Zip, then sends it to my STe via the 'Zmodem' protocol.

When this is done you can get offline. What happens next is that you 'import' the SOUP packet into Okami, where it's decompressed and all the mail/news is organized neatly into groups. It'll resemble very closely to your usual newsreader which you use online or whatever, only now you can read/reply/write mail/news using all the time in the world!

When you've done all your replies and/or new messages you ask Okami to make you a 'reply' packet. It collects all your reply messages together and makes a compressed SOUP packet.

Next, you connect to your provider, enter the 'olbatch' command (with the correct syntax) and the Unix system fetches your reply packet via Zmodem, decompresses the packet and sends all the messages to the respective email addresses and newsgroups. It's pretty neat seeing all this happen automatically! To make it even more automated you can make a script if your terminal program has that capability (Connect does) where it first sends your replies, then gets the new messages and finally logs off.

Check if your provider has offline packet capabilities (prefferably SOUP) and get back to me, and I'll try to help you out with Okami.

Another great XaAES progress report....

beta 3 is out tonite, with loads of new features and better compatibility.

I won't waffle on to much, apart from to say that I ran Cubase 3 on XaAES today :)

Other notable new compatible programs include Thing (properly now), Edith Pro, PC_Shell, ST_Guide, GemView & others.

But why wont that bloody lines.prg from atari run???????

Folks on the XaAES list will know where to come for the source/binary distribution.

Craig.

Source record: 149579

I don't know about CAB but netscape simply transfers a binary file, just like it transfers the html files. When the file doesn't have an html extension it checks its list of helper apps to see if you have one assigned to handle that type of file. If there is none, then it asks the user what to do with it, and you can save it to disk. The transfer process is likely not much different than transferring an html to its cache, except that its a binary, so a special internal protocol might be used.

AFIK you can't FTP into a WWW web site that doesn't support it.

Maybe others can expand on this.

Well, I think that CAB (the Crystal Atari Browser) will work from a
floppy providing you do have a true SLIP connection (barely) I would
not however, recommend Oasis for a floppy only system. I'm using the
1.35 version and when I uncompressed it on my hard drive, it came to
a little over 1 meg in size...so that would be kinda hard to fit on
a DS/DD floppy...Get a hard drive man-you won't regret it! :)

4327. Crystal Atari Browser Problems

Newsgroup: comp.sys.atari.st
Date: 1996-03-04 00:00:00 UTC
From: darchyld@harold.eastky.com
Message-ID: <826017784_OASIS_@harold.eastky.com>
Source record: 149582

Well, I finally got a local provider who (still) offers SLIP so I finally got a chance to try out CAB...Basically, I can't even logon yet...It goes something like this:

1) login:
CAB responds with darkchyld.pcc-uky
2) Password:
CAB sends my password
3) Options:
CAB sends S to pick SLIP from the menu
4) SLIP connection 204.27.28.44 to 204.27.28.12 beginning....

And there is where it "hangs"... in the string window on the STIK accessory its showing Ip Address and the timer is counting down until it times out...Thanks in advance for any help! :)

Hi

I'm also getting a lot of Base 64 files from contacts in the states/Canada.
I have to pass them onto a PC friend who sends them back to me in UUE, and
I then use Esscode to do the job.

If anyone feels like writing such a decoder, they make some of us very
happy. Perhaps Michel Forget (Esscode) might even think of writing such a
thing?

> friendlyness for getting onto the internet!

I can't really help in a big way, but I have finally got Oasis 1.35E and
NOS 0.42 working pretty good.

No chance so far of getting CAB/Stik working, though someone is helping me.
Oasis 2/ICE is due within weeks and should answer most of our prayers.
Though I think getting a very reliable and easy to set up web browser is
some time away. But CAB is a really nice program, and I am sure it will
soon be what we want.

Unfortunately, getting onto the internet with an Atari is quite hard work,
but I am sure that there will be help for you, and my advice is to
persevere. I did, and at least now, most of what I want to do can get done.
It's not perfect, but it's better than not being on here at all!

Message-ID: <960304140010286 49@acpu.com>
Source record: 149588

Hi, everybody. To those of you who are getting mailbombed by me, I repeat *I am not doing this*. Please put me in your email killfile for the moment, while I try to get this sorted out with my provider. I will be sending *no* email in the meantime, except for test purposes to local friends. If it is life-and-death, I will have to consider posting a message to you here in csas with the hope that some kind soul will re-mail it without my name on it, so that it gets through. This will be rare-to-never. When the problem is sorted out *permanently*, I will post the fact here, with the hope that those who have been forced to put me in their twit list will give me a second chance.

I sincerely apologize for this. It was (and is) not intentional. My gateway/provider is a fine person and a personal friend, and this situation is straining our friendship a bit. But the demands of friendship dictate that I do whatever I can to help to remedy glitches in his system. I am positive that they are not in mine.

I consider the people who are being inundated with 'email reruns' from me to be my friends also, and I *know* that this has caused strain, not to mention some question as to whether I drool for a living :)

Please let me know whether csas is also being bombed. While I have received no such reports, and have evidence that it is not, this whole situation has shaken me somewhat, and I am trying to cover all the bases.

While I have seen some 'stutters' in some postings here and there, to the best of my knowledge this is not a common problem. It may be quite a while before we get it fixed. I plead for patience, and say again - I'm sorry!

thomas@mistral.co.uk (Thomas E Haines) spake thusly:

TE> I'm curious about what this means for Atari's future

You provided your own answer:

TE> I know it doesn't make any difference to the Atari computer
TE> scene, which has had nothing to do with Atari Corp for some
TE> time now,

Except for the licenses they have granted for TOS to C-Lab, and maybe others. And the existence of Magic may make even that irrelevant, except insofar as JTS may indulge in dirty dealing. If they are honest about maintaining the license agreement and not bothering the Magic people, everything should be copacetic (obsolete US slang for tickety-boo :)).

"The Poor Deluded Soul" - tderrick@acpu.com

I am offering the following system that served me for several years. The system has been upgraded several times and everything is working.

Atari Mega ST1 plus SM124 monitor
- memory upgrade to 3Mb basic memory
- speed upgrade with HBS T36, !!!!!! FAST !!!!
(68000 at 36MHz iso the normal 8MHz, 64kB cache)
- coprocessor
- TOS 2.06
- 1.44 floppy drive
- Multi-TOS
- NVDI 3.1
- Xtra RAM for Mega St (without RAM, does not work with HBS T36),
(for a memory expansion up to 8Mb, giving a total of 11Mb)
- Separate power supply 200 Watt
- AT-SPEED C16 PC emulator board (286 plus copro, 16MHz)
- ICD Advantage ST SCSI adapter
- SCSI Quantum-Pro drive 40Mb (fast)
- 2 old Megafiles 30Mb drives, one controller damaged

Anyone interested in this computer should contact me at
gerh@physchem.ox.ac.uk
and we will be able to agree on a very reasonable price for this system.

Ger van den Hoek

1) Your IP provider must give you NON-COMPRESSED SLIP not CSLIP. Took
me about a week and a half to get this done.

2) For the gateway add a new line in DEFAULT.CFG with the keyword:

PROVIDER = 255.255.255.0

.....replace the bogus IP address with your providers gateway IP and it
ought to work. It did for me.

Nope, I've use ICD AdSCSI PRO on the ST157N drive
without problems on a SUPRA box. Notice, this is the PRO version.
I just put a CDC WREN (3.5"), model 94354, 177 meg in
a SUPRA box and the only driver that would handle it was the
ICD 'PRO' driver. Well, the SUPRA untility would have worked IF
you wanted to have 11 - 16 Meg partitions. With ICD PRO I set
it up with 1 - 16meg (C) and 2 - 77meg partitions (D & E). This was
going on a TOS 1.00 ST. Needless to say this person had to buy
the ICD PRO utilities. He's happy, that's what counts.

> slow brain, Mega-ST 4 and TOS 1.2. Got any ideas what could be wrong?

That depends on how - (& what!) - you installed. Unfortunately the updates from v1.33 aren't complete, ie the INSTALL.PRG still looks for a folder named OASIS133. So - after running FILES.TOS, you'd be better off renaming the resultant OASIS135 folder to OASIS133. Or you could just patch the INSTALL.PRG!

Don't know if that's your problem, though, but you could always try it out!

Configuration on Windows95 is straight forward, IMHO. I know, because I wrote the configuration manuals for different platforms for a local ISP here (Mac took the trophy for simplicity). Anyway, I still have diffuculties getting STiK and Cab to function properly and the manual failed to mention how to setup for gateway (at least the copy I downloaded anyway).

Basically, I setup all according to readmes etc.., and get a a connection and activate SLIP on the Server side. On the Atari side, the message just indicated that it did not establish the SLIP eventhough the server said that SLIP was engaged. Server never says whether if SLIP was successful. CAB does not communicate with the outside either. I am very certain that SLIP was not engaged, but the lack of defining the gateway also worries me. Does anyone care to help? Thanks...

-ME

P.S. I tried to us IP address in CAB with no success either.

From: bikerbob@wchat.on.ca
Message-ID: <4hgfh7$cpl@roger.interlynx.net>
Source record: 149595

Greetings..

I am running an STE with 4 meg and an ICD ADSCSI harddrive setup.

I picked up this machine second hand with alot of software. One item on it was Xboot.

I know that it allows you to assign it different directories for the ACCS and CPX's but my computer will not read ACCS from anywhere but the root on the boot drive.

There is a file called Control.inf is this the file that I have to play with somehow to get Xboot to get the ACCS from a directory call ACCS?

Any help with Xboot would be helpful... I have searched my shelves and if I did get a manual with the Xboot when I got the system I cannot find it now.

At least with SCSI drives the parking program has no alternative to using the
standard SCSI command START/STOP UNIT for parking the drive. So there is no chance
for parking software to be clever :-).

You can't include this capability in a hard disk driver because the driver works on the
BIOS level, compatibility problems arouse on the GEMDOS level.
BIGDOS can be found on several servers, e. g. ftp://acp5.chemie.uni-kl.de/pub/atari/.

>simms left over when I upgraded the STE so I'll just need the board,yes ?

No. You'll need 1 Meg SIMMs just as the STe does. And the board of course.
If you're talking about the Marpet(?) board, you need not solder very much,
maybe four or five leads. The mechanical fitting however _can_ be quite
challenging for the less technically inclined.
But by the sound of it, you'll not be one of those, right ? ;)

I have a portfolio for sale.

Comes with 64 kb RAM card, parallel interface, data transfer software and
"Foliotalk" a software which allows one to browse in the portfolio
directories within a GEM window and to transfer files with a mouse click.

The portfolio has a German keyboard layout.

Asking price is 150 $

Yes, it does exist. It is called Okami, and I know of two people besides me
who use it. For more info, you can mail me at rarozijn@xs4all.nl and I'll
try to help you with it.

Enjoy life,

Sander.

4362. Re: ST Midi files to disc compatible with Mac?

Newsgroup: comp.sys.atari.st
Date: 1996-03-06 00:00:00 UTC
From: Robert Aries <74030.2630@CompuServe.COM>
Message-ID: <4hk687$49m$1@mhade.production.compuserve.com>
Source record: 149259

abbottt@ERE.UMontreal.CA (Abbott Timothy) writes:

>Can anyone help me with the procedure for putting midi files on a
>disc that is readable on a Mac.

I assume you've already gotten the file onto the Mac using Apple File Exchange or another similar utility.

The step you're missing, once the file has been transferred to the Mac, is to set its "Creator" and "File Type", the two elements that are unique to Mac files. You can do this with a variety of programs, some specifically made for midi files. ResEdit, which comes with every Mac, will work.

To be specific, you need to set the "File Type" to "Midi". The "Creator" doesn't really matter unless you want to be able to launch the Mac sequencer by double clicking on the midifile itself. If the Creator isn't set, you'll need to run the Mac sequencer first, *then* load the midifile in.

BTW, be sure to enter the file type, with a capital "M"; the designation is case-sensitive.

Hope this helps.

Rob Aries

PS: I have an Atari ST and a Mac...guess which computer I continue to use for midi sequencing!

What a superb game that was. Good luck, and have fun.

> So we need to find the author address or e-mail or any way to
> reach him (or them).

This was written by Geoff Crammond, and he still works with MicroProse
(just finished Grand Prix 2 on PC), so you can probably contact him
C/O MicroProse. I can't remember the postal address, but it might be
available at http://www.microprose.com/

As an aside, he has said that he may do a follow-up to Stunt Car, with
36 cars, and using his new game engine. Now that would be *cool* :-)

F O R S A L E

P L U G N' P L A Y
H A R D D R I V E S E T U P !

50mb Seagate hard drive
44mb Syquest removable hard drive with (see below)
(5) 44mb Syquest carts
AdSCSI Plus host adapter
DMA cable and software
Case, fan, and power supply

All Fully cabled and ready to go! It's a Plug N' Play situation!

The Seagate and/or Syquest can easily be replaced with a larger drive.
Power switches on back and front for convience.

I cannot swear to it, but from the looks of it, a manual, and how
nicely it was all put together, I would say this setup was put together
by TOAD Computers.

Asking Price: $250 + Shipping

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST.
I am also open to trade offers. E-mail me your list.

HARDWARE

Atari STacy4 $700.00
4 MEG RAM
52 MEG SCSI internal hard drive
720 3 1/2" floppy
External Power Supply
Corduroy/nylon carrying case with handle and shoulder strap
Has standard ST ports. MIDI, Parallel, Serial, Mouse, Joystick, DMA, Monitor
Has built in track ball, but if you wish you can use a mouse
Has built in backlit LCD 640x400 mono screen.
You can hook up either an external color or mono monitor.

Atari SM124 Mono Monitor $50.00

Atari SF354 SS External Floppy Drive. Comes with power supply and
cable to connect to ST. Unit is in perfect working condidtion
but a little loud. $35.00

MISC

GE Soft Mighty Mic TT/32 4-32 Meg TT RAM Board.
0 RAM Installed Best Offer
TT RAM board that can hold 4-32 Meg of RAM. Board works but
when the machine gets hot the system bombs. With board removed
or system cold, system does not bomb. May be a MMU chip?

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $3.00

Carrier Command by Rainbird. Complete with box, docs, and disks $10.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Dragonflight by Thalion. Complete with box, docs, and disks $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

Omega by Origin. Complete with box, docs, and disks $10.00

ALL drives that gave me trouble using HDX formatted without any
problem when using ICD software. I have never found a drive ICD
wouldn't format, exept when the hardware itself was faulty.
Go out and buy it.

Howdy all,

It's been about one and half years since my cracked motherboard mega SST ran atari software, but now with a new internet connection, I decided to check out what is still going on (that and a toad catalog). Anyone use the latest gemulator? What do you think of it? Do there happen to be any ICD-extended partition table loadable modules for it, so you can read the st hard drives? I thought it would be fun to put fidodoor up on the PC/ST just for old times sake.

Well, have a great week...

"MICRO" aka Bryan Hall

PS, anyone know the whereabouts of Bill Jones (who was in Indianapolis) and ran a BBS there?

I have seen Maxtor drives working well with Supra adapters, but the person used AHDI, not the Supra utilities.

The Maxtor drives were 120 & 245 Mbytes.

Maybe the problem is with the ICD formatter, was it set to AHDI compatability ?

Can you re-format the drive again, this time on the Supra adapter.

Does anyone else think the experience of MG-FTP in the Atari online community negates the need for extensive beta-testing? Are we not, in essence, all beta-testing the FTP program, and (I hope) making the author aware of out constructive criticisms?

Meanwhile a number of programs destined to get heavily used by a large number of the Atari online community (OASIS2, further improvements to STiK, CAB etc.) seem to get stuck with a smaller number of testers. I'vbe lost count of the number of OASIS 2 beta-test postings I've seen.

Why not release these generally with an understanding that we are ALL helping to test and participate in the development of this software? After all when have we seen rapid development in software? When there's a large user base all able to give feedback to the authors.

Any comments?

Andrew

No - they're just not taking new subscriptions. Renewals are still
possible though. They mentioned it a couple of months ago in the
subscribers' newsletter.

>HTML pages use http. This is packet based. You do not log on to the
>remote server. Data is returned in a series of packets.

From the operating system's point of view both are connection based.
http however only sends one file and then closes the connection, whereas
with ftp you can keep the connection open to send another file.

Most web browsers do not take advantage of this feature of ftp, which
is why a separate ftp client is normally better, particularly if you
have several files to transfer.

>Gopher connections (e.g. HENSA) use gopher. I don't know how this works.
>It is not very popular these days.

It too is connection oriented. As far as I know it closes the connection
after each page has been transferred, just like http does.

Strangely enough, I've had something similar recently. I posted an article
to this group regarding the arrival of ST World in Sheffield. Two days
later, it had still not appeared, but Frank Charlton and another gent were
busy posting replies to my original posting!

It could be Nos/Oasis to blame, but somehow I doubt that, so did everyone
else receive the following posting: "Atari World 11 in Sheffield" ?

Specifically, did any Demon users receive this posting?

When I think about it, I am sure this is the second time this has happened,
i.e. I've posted an article, and received follow-ups, but the original has
never been downloaded by me :-(

CrackArt supports 320x200x16 GIF 87a pictures, but it has no scaling capabilities, nor can it reduce colours if the picture has more than 16 colours in it. In those cases you'd want to convert it to a 320x200x16 image using GEMView or SoL or something, then play with it under CrackArt.

>community negates the need for extensive beta-testing? Are we not, in
>essence, all beta-testing the FTP program, and (I hope) making the author
>aware of out constructive criticisms?

Yes we are all testing it, but I would presume the author has to
draw a fine line, He wont want to release a version too bug ridden
and have a massive mailbag of people telling him what wont work,
I would presume he adds a command?, then has a few people giving it
a good testing, if it gets past them then we get it for all round
testing and use, however if it doesent get past that first chosen
few then it saves him and us a lot of grief?

>Meanwhile a number of programs destined to get heavily used by a large

Yes I have seen a lot of these, but from the one person, he seems to
be taking a great delight in making everyone droool <grin>,

>Why not release these generally with an understanding that we are ALL
>helping to test and participate in the development of this software? After
>all when have we seen rapid development in software? When there's a large
>user base all able to give feedback to the authors.
>
>Any comments?

Yes, after all there is a CAB mailing list and we get the latest
versions as and when they arrive, this very day I have just released
the latest StiK software from that mailing list, what better way to
test the program than to let the masses do it, we all know that
CAB/StiK package is not finished, its always been in beta test, yet
we are all happy to use it, even paying 15 quid to register it,

Totaly agree with everything you said there Andrew :)

Thanks, OKAMI? Any idea where from , or indeed anyone thats already
using it, I could do to mail them,

My providor is Airtime Internet Resources based in Blackburn uk
Pipex pops
I am told oasis nos works faster for me than any demon account :),
but i still find it takes an age to download news, using SOUP would
be a simple matter of downloading the package, list pointing off a
BBS or QWKing, gotta be faster right ? :)

Airtime have an extensive web page with all info and list of pipex
pops, ten quid a month, all internet facilities and one meg of space
for a web page, you can link to Airtime from my page in my sig,

Okami then, anyone using it ? please write :)

The cheapest way is what I am doing now, find a university that will
let you have an account or locate the nearest freenet or if not, just
use your comms program as a terminal to your provider and use their
versions of lynx(text only) Get off Compu$erve and try to find a
cheaper local provider as I said above if you want to get CAB ftp
to toad.net and download it. make sure you have your archivers first.
I do this eventhough I have a Mega STe 4/50.

>
>With regards, Jyri

Hmmm .....think you mean SOUP there, although soap packets have that
familliar ring to them soup packets sound so much more tasty!

The qwk system I personally prefer (and use) with BBSs is KIVI QWK.
Its shareware, written by Arto Jalkanen in Finland.
I see no reason why it wouldnt work with QWK internet generated stuff.

Here's a few extracts from the docs:-

The Original idea behind Kivi QWK was to make a good
MultiTOS compatible QWK-reader, since the existing QWK readers
didn't work with MultiTOS.
Kivi QWK is supposed to be an easy-to-use, MultiTOS and
generally everything else compatible, very stable and well
documented QWK-reader.

Available from (BBS support board)
Limited Infinity BBS is a place for Atari, and Atari only.
We're no pc-lamers, we're all Atari. (No offence to pc-users ;))
Call +358 (9)73 311465
v.32bis (14400 MNP5 & v.42bis)
Open 24 hours a day.
SysOp: Teemu Hukkanen
You can always download the latest version of Kivi QWK there,
and you can also get the key-files there.

Send the registration to:

Arto Jalkanen
Everstinkuja 6 C 45
02600 Espoo
Finland

And then something in finnish (sorry foreigners :-( ).
Suomessa tarvitsee maksaa vain 60mk tilille ja tili on:
PSP 800027-11955186
Ja oma osoite pit`` ilmoittaa!

There are of course others but this is IMHO very stable, fully Gemmed
and a doddle to use. It's very easy to use and set up for those of us
who are intelectually challenged like me :)

The only problem might be the compression used by your ISP as (I
think) KIVI only supports zip, arc and lzh.

Thats my two penn'oth anyway.

Good Luck

Dave G

>
>Andrew

There certainly will be :)

We seem to have two streams of thought here within the Atari
community. These two are to some extent reflected in the two primary
supported software scheme agents.

Joe is unhappy that CAB is being tarred with the www brush and the
difficulties of using same so publicly moaned about both here and in
the various Atari fora (ums?)

Danny continues to explain Stik and more importantly the ovl is "work
in progress" and we should all support and encourage this
transcontinental effort.

New add ons are appearing for stik that are not supported by either.

Lets face it , This is a community building project that is, so far,a
striking piece of architecture with some stunning features, some badly
surfaced roads and no maps available to it, merely jungle
guides.(sorry Flinny :)

Has the adverse publicity helped the www project? I dont think so.
It has however led to the expansion of yet more software of dubious
stability (some of it undoubtedly due to the soft sand on which stik

sits) Has the criticism been constuctive? Has it reached the authors? Most of what I've seen should have been answered RTFM and the rest (10%) forwarded to the developers.

Yes, we should all register and encourage these guys, they're out there performing miracles for us IN THEIR SPARE TIME. Quit badmouthing at the back there, all you've seen are very early betas of most of this stuff. Send cash and bug reports.
^^^
OTOH we have Oasis.
Oasis also has had some bad press, totally unjustly IMHO.
Recently Phil and Dave have been ignoring v1.35 problems and concentrating on the monumental task of rewriting nos as a gem prg along with a full re-write of the off line reader. He sends regular mailshots to registered users and has selected some to test v2.

Oasis has suffered a lot in the past from minor bugs and the boys have been prolific in both issuing updates and helping out unregistered users with problems (me included) even after registrations were asked for. Now there are unanswered problems on v1.3x as they go flat out to refine O2 for release. This is already a "Killer" application which they are avowed to only release once they are happy with it.

Yes, Frank has a copy and so, more recently, does Darron. Other than these I think there were only five or six registered users selected to beta test on a variety of hardware and ISPs.

How many users would bother to register their beta test copies of O2 should it be on open release? I can read the header on the mailshot to see how many have already sent Phil the tenner they were asking :(

Who doesn't think they've had ten quids worth out of Oasis so far?

Oasis2, when it is released, will be damn near commercial quality software for a minority platform, so much so that these guys deserve all the encouragement we can give. They are determined it will be so. The economics of the situation dictate that, should this be available commercially from a source such as compo\ash\migraph they would be asking God knows how much.

Personally I think it deserves commercial release or at least some crippleware limitations. (Highly unlikely but still advisable)

Lets face it, shareware is the future for most of the Atari world. Abuse it and loose it. I dont want to be annexed to the Gates empire. Neither do you.

Which ever way shareware goes, open to all or closed until polished, it needs us to register. Do it now.

Dave G

P.S. Last I heard Oasis2\ICE will be released within the next month or so. Testing is going so well. Believe me, its a gem.:)

hallbd@usa.pipeline.com(Bryan Hall) inquired pleasantly:

BH> Anyone use the latest gemulator? What do you think of it?

I have a friend who uses both Gemulator 3 (Dos) and Gemulator 4 (Windows). The last time I spoke to him, he was leaning heavily toward using only v3, due to considerable troubles with Windows95 and (perhaps) the Gemulator 4 code. Makes sense to me, as Windows still amounts to a rather poor 'Mac emulator', not very suitable for running an 'Atari emulator' on top of, while DOS, for all its faults, is an operating system.

For those of you who are wondering, Linux is going up on one of his pcs soon - maybe he'll do STonX next. He's that sort of a guy.

Get Okami. It's a very good newsreader for News and Mail. It can use both
SOUP or UUCP and can even handle mausnet if needed.
I'm using it (right now) and so are Hallvart, Sander and probably a couple
of others here as well.
Don't expect to set it up in half an hour, but if you take some time,
and good advice ;) , you'll be rewarded with a very good Newsreader.

The file name to look for is O_026.[zip,lzh,etc]
You'll want a commandline shell too to run the im- and exportscripts.
Okami has no built-in editor, so you can still use your own favorite one.

Good luck. I'll be glad to help you, but do read the docs first.

Greetings,

: a huge 11 cycles for a ror.w #8,d0 ?
:

This is out of the M68000 User Manual by Motorola

. . . Performance of shift/rotate instructions is enhanced so that use of the ROR and ROL instructions with a shift count of eight allows fast byte swapping.

The ror.w #7,d0 takes 6+2n clocks or 6+14 or 20 clocks to do it.

I think the ror.w #8,d0 is as fast as the swap.w d0, in that it takes 4 clocks. I dont know for sure, it could take 6+2n with n=0 or 1.

hi!

I have a Supra DMA->SCSI converter.
I was looking to using it in the following set up.
Connect the DMA out on the St to the DMS->SCSI converter
and the DMA->SCSI DMA out to a DMA hard drive.
But I want to use the SCSI so I could talk to say a AKAI s2000 at the
same time.

Has anybody tried such a set up??
Any problems ?

thanks

> thanks....and no flames!
>

I had this problem, except it was in decoding PC-uudecoder files on the ST.

I found that the header & footer that ESSCODE places in front of the
segments was not compatible with PC uudecoders.

The easiest way to discover what you need is to UUencode a file on the PC
& look at the files on a text editor. Note the first & last lines.

Now do this on the ST & look at the difference.

You can edit the PC files on the ST to put the text in the format ESSCODE wants.

I gave up on ESSCODE - it was just too awkward to use, sorry.

If you just want to transfer files ST <-> PC :-

1. Try a serial link, Terminal emulator programs on the often have a host
mode, where you can log in & download files.

2. You could zip the files, split them into 700 Kbyte chunks, save on a DD
floppy, cat them on the PC, then un-zip.

: Can someone explain to me how to upgrade my Mega Ste (one of the first ,
: with 720 kb floppy drive and TOS 2.05) with 1.44 Mb floppy drive ?

Open up your MSTE, disconnect the old DD-drive and connect the new HD-drive.
The MSTE will now read and write HD-floppys :-)

: Which IC must be replaced ?

If you experience problems you have to replace the floppy-controller (A
Western 1772, I believe) with a more modern Ajax. Most Atari-suppliers can
get you one.

: Some switch must be change position ?

There is a row with 8 dip-switches next to the ROMs. You have to flip ove
switch 7 if you want to format HD-floppys from the desktop.

A 2.06-upgrade will also do, 2.05 is quite sluggish...

gzip -d filename.gz will decompress the gzipped file. Try gzip --help for a complete list of options. Untarring is a bit trickier. The two commands I use most often are tar- tvf filename.tar, which lists the files in the tarred archive, and tar -xvf filename.tar, which unpacks the archive. You should really get the GNU version of tar, called gtar.ttp, IIRC. If you do, typing tar --help should give you a list of parameters.

It sure looks _very much_ like SOUP to me. But I think that SOUP uses
two different Zipfiles, one for News and one for Mail.
But apart from that, this must be SOUP you're talking about.

That is a 'bug' in the Falconwings card. I mean it's a bad design. To my
knowledge, this can't really be fixed... But maybe someone else knows more.
Otherwise you should get the card that uses 1 16 MB PS/2 SIMM, those are good.
Trouble is of course, that you cannot use those SIMMs you have in it :-(

>Its shareware, written by Arto Jalkanen in Finland.
>I see no reason why it wouldnt work with QWK internet generated stuff.

The problem with QWK is that it truncates subject lines. It's not too
much of a problem for fidonet where although longer subject lines are
possible they are not much used, but on usenet it is often a problem.

Because QWK also destroys the references line, messages you write have
no references line and the wrong subject, so there is no way for a
threaded newsreader to know that your message is really part of the
same thread as what it's replying to.

Sorry what does that mean, what is Joe unhappy about, tarred with
the www brush?, thats the bit I dont follow ?

>Danny continues to explain Stik and more importantly the ovl is "work
>in progress" and we should all support and encourage this
>transcontinental effort.

Thats exactly right, no one said it was the finished product, yet a
lot are still moaning ?

>Most of what I've seen should have been answered RTFM and the rest
>(10%) forwarded to the developers.

Yes everyone reverts to RTFM but reading the Manual does not
gaurantee understanding it ?? I would imagine every question ever
asked in this newsgroup could have been answered by reading a
manual,magazine,book,faq , but the questions still get asked, indeed
there are many who get a great deal of pleasure from answering
them, I know if I can ever succesfully answer a question it makes me
smile :)

>Yes, we should all register and encourage these guys, they're out there
>performing miracles for us IN THEIR SPARE TIME. Quit badmouthing at
>the back there, all you've seen are very early betas of most of this
>stuff. Send cash and bug reports.
^^^

This is 100% true, I see the registering of such programs as an
incentive to the programmers to keep going, if everyone waited until
it was ready and bug free then it simply would not happen, there are
too many people asking why they should pay for a bug ridden product,
Pay up and it will soon be unbugged and you will be one of the first
to recieve the latest versions, I got the latest CAB.OVL this morning
that is reputed to be crash free (we will see <g>) and yesterday got
the new StiK and associated programs,
Dont wait for the finished product, pay now and give people the
incentive to carry on,
This is only my second day using Oasis (fanx Flinny) but any fool
can see its worth registering and paying a tenner to get my foot in
the door for Oasis 2 sounds like a bargain as well :)

> What should I do?!?!

~

Mv> *Hey*, you're not accusing any of us here, now are you ???
Mv> For starters, it doesn't work this way. You have to put some
Mv> effort into it yourself. And if at a certain point you get
Mv> stuck, *then* you can ask more _specific_ questions and many
Mv> will be able to help you. What you're asking here IMO is for
Mv> someone to write a comprehensive manual covering all possible
Mv> pitfalls installing all those five programs. Probably no-one
Mv> is going to try and do that in their free time, because it
Mv> easily involves hundreds of pages of text.

I don't think Julian was accusing any one of anything. After all, I feel just the way he does (except I haven't yet tried to install any of the packages...:) I look through the messages here, and boy it seems like there is an aweful lot of problems getting an Atari hooked up to the Internet.

The only provider available to me charges $55 sign-up fee, plus $25 a month minimum for 50 hours. (I just attended an informational meeting tonite.) The only computer available to me is an Atari. I don't get to practice on a free account, nor can I whip out a clone computer to use if the Atari packages fail me. (I'm not saying you can either! :)

With all the problems I read about connecting to the net, I'm wondering if I really should spend $80? It seems like an expensive gamble at this point in time.

You mention that Julian should read all the docs that come with the software package. I just un-compressed NOS today from the Compendium CD-ROM. The doc folder contains 1.5 megs of text files. That's just _one_ of the packages.

I don't want to spend the next 3 years reading *.doc files and lots of money on access fees, and it maybe doesn't work after all? I want to surf the net. It sounds like Julian feels the same as me - I buy a word processor, spread sheet, telecom package, skim 100 pages of a

manual, & things start happening. Accessing the Internet seems a
far, far reach from that. I understand WWW (CAB, et al) are trying
to head in that direction, and are really just in testing stage
right now. So, no disrespect to them, but darn it, I wanna open the
box & start playing!!! :) Like Julian, I'm not upset with anyone;
I'm just frustrated that I have to wade through 1.5 megs of doc
files, and use software that may or may not work. :)

4433. Altavista problems anyone?

Newsgroup: comp.sys.atari.st
Date: 1996-03-07 00:00:00 UTC
From: andrew@ajrose.demon.co.uk
Message-ID: <826314286_OASIS_@ajrose.demon.co.uk>
Source record: 149288

I've recently been having problems with the Alta Vista web search engine using CAB/STiK. I've only managed to get to the search results once in the last few attempts - all other attempts have resulted in a total crash, returning me to desktop under single TOS and giving me memory corrupted under MagiC 2 (the bit where it asks "Try to repair?"), the latter being almost unique in my experience of CAB crashes. This is a regular repeatable occurence, expect for one attempt last night when it worked like a dream for my first search, before crashing on a second search in the same session.

This suggests that the problem isn't entirely mine. Anyone else suffered similarly using CAB to access Altavista (on www.altavista.digital.com)?

I'm a little confused by this one - everything else is working and crashing as usual on the WWW.

Suggestions?

Andrew

Andrew Rose (andrew@ajrose.demon.co.uk) wrote on 06.03.96:

>Why not release these generally with an understanding that we are ALL
>helping to test and participate in the development of this software?
Here are two reasons:

1. A team of experienced knowledgeable testers can work faster than hordes
of inexperienced ignorant ones.

2. Managing the output of the hordes: duplicate, incorrect and or redundant
error reports takes time and resources.

>After all when have we seen rapid development in software? When there's
>a large user base all able to give feedback to the authors.
Do you mean like in the Windows 95 development ...

When beta testing is done and the product is stable and there is hopefully a
consensus that it's ok to release, then of course the more users that pummel
it the better - and then error reports should be welcome feedback (it's also
nice to get a little positive feedback too).

Of course, the answer is simple. If you want to find out all about the new Oasis, simply pre register for it! Then you get sent updates on it's progress and don't miss out on a thing!

And you would have been given the opportunity to be a beta tester!

And at £10 to pre register, it's a bargain!

Cross-posted to: comp.sys.atari.st,misc.forsale.computers

My freind has an Atari TT030 for sale. It includes 8M of RAM and a hard drive which we beleive is 40M. It does not include a monitor but does include a mouse and keyboard. The keyboard has a few keys broken off, so they will either need to be repaired or the keyboard replaced. The computer and mouse are in like new condition. I think you can use a standard VGA monitor with it. At least that's what we used to test the computer and it worked.

Please e-mail me with offers.

4449. Re: What SIMMS to use in STE?

30 Pin SIMMs, with or without parity. The Parity bit is ignored.
The type (2, 3, 8 or 9 chip) and the speed should all be the same in the
same bank. Even 100 NSec speed will work. 2.5 Meg, Bank 0 has to be
the 1Meg SIMMs.

Hm, the latter versions of Oasis (pre v2.00) aren't as Demon-specific anymore.
I'm running v1.35 here in Sweden on an ISP that definitely doesn't resemble
Demon a bit! ;)

Do mail me if you give it second thoughts!

Actually, Michel has ported ESSCODE to Windows; the version number even is up
to v6.7! If you have one of the later Atari versions, you'll find where to find
them in the DOCs.

Don't know about anyone else, but MG-FTP is rock solid for me!
Only times it has bombed was on second start up in an earlier version
(fixed) and once after the carrier got dropped by my ISP! I've run into
and reported several bugs in the earlier versions, but no ugly bombs
across the screen 8-) Michael Guse is doing an excellent job! At the
present time MG-FTP is fully operational! He's busy adding even more
bells and whistles. This thing is really going to be something special
before he is done with it!

4459. MagicMac keyboard problem/new version?

Newsgroup: comp.sys.atari.st
Date: 1996-03-08 00:00:00 UTC
From: chambera@cs.pdx.edu
Message-ID: <4hqioc$egj@pleiades.cs.pdx.edu>
Source record: 149169

Apologies to anyone who's already seen this--my news server is misbehaving again.

I'm having a weird problem with MagicMac 1.2.5 and my Quadra--when I hit the " (doublequote) key I get the @ (at sign) instead! I've tried the usual fixes--conflicting ACCs and AUTO folder progs, conflicting extensions on the Mac side, etc. I'm not sure if this just started or if it's been this way since I installed MagicMac (since I use TeX most of the time I don't have much occasion to hit the doublequote key).
Any ideas?

Also, what's this I hear about MagicMac 1.2.6? What does the upgrade consist of? Any keyboard-related bugfixes? (crossing my fingers...) 8-)

>
> Hope this Helps :)
>

I use the JAR.PRG all the time. I haven't any problem with it. The
only differents is that I've changed it to JAR_15. I've tried OASIS
with NoDesk 3.04, Tera, Neodesk 4, Gemini, Thing 0.59 and
Mint/Mintnet/Thing 1.0. In all these desktops Oasis runs fine. The
only thing you must not do is trying to load Oasis in TT-ram. If you
do it reacting strange (at least at my TT). It also seems not to work
with Geneva.

4471. HELP!! Lynx an Mint

Newsgroup: comp.sys.atari.st
Date: 1996-03-08 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4hptsi$esb@madeline.INS.CWRU.Edu>
Source record: 149181

Help!
I have finally gotten lynx to run under mint. By using the TAF
distribution, but NOT going in to x-term. I did this by setting
INIT = . in the mint.cnf file. Now I can use gem to run dip,
and run lynx by clicking on it in /u/f/lynx/lynx. That is where I
put lynx. I have put lynx.cfg in /f/usr/local/lib as specified.
If I run lynx with no arguments (in the TTP box). it can't find
www.cc.ukans.edu, and dies. if I start lynx with
http://www.cwru.edu
it finds it ok, but with no bolds on the link names, and no
cursor telling me where I am. I run lynx on my VAX, and so
I know what it should look like. I can run ok, but it is tough
to maneuver with no cursor. What am I doing wrong??
I still can't run it in an x-term window, under TAF.
I can get dip to connect right, but when I click on lynx,
it dies with an "out of memory" error.
Any ideas?

A Config program is currently under development which will do much of
this for you it will make your config file dial script and install all
of the files in the right place for you.

You should install the French version of MagiC 4.

m>
m> Maybe it is, but do newbies actually know where to go for FAQ, or even
m> what they are?

FAQs always used to be posted as a message in the newsgroup itself about once
a month. I'm only in 4 newsgroups nowadays but I haven't seen a FAQ in any
of them for a good 6 months...

It's a pain to download them because they're usually pretty long, but if it
helps to clear up misunderstandings in advanec it may do some good.

Does anyone out there know if there is a port of Perl which runs as a .ttp?

I know the Perl for Linux, I am looking for something to run from MagiC, and I am sure I saw something a while back. Of course I had no use for it then, and now I do, do you think I can remember where I saw it? Not on yer bloody life!

All help gratefully received...

They can be larger if you use the BIGDOS GEMDOS extension which is free software. (ftp://acp5.chemie.uni-kl.de/pub/atari/.) But note: BIGDOS requires a pachted version of AHDI or an XHDI compatible driver (CBHD, HuSHI, HDDRIVER). The ICD software won't work. At least this is what the BIGDOS README says.

I have the following item for sale if anyone is interested. All prices asked for are negotiable....

I have for sale an Atari 512K STFM computer complete with an Atari mono monitor. It is very reliable & in good condition. Included would be lots of Software mainly games & utils. 150 pounds & it is all yours.

Lots of Atari mags, Atari ST User & ST Format going back to about 1989 with no issues missing and all with cover discs. I would rather sell each type as a lot rather than split them so only 20 pounds for each bundle.

Finally I have an Apple Macintosh Stylewriter II printer for sale. Works perfectly but only used to test print. Cost 180 pounds. I want 135 pounds for it.

E-Mail me or if you are in the UK my telephone no. is (01323) 893294 after 6:00pm.

Its _is_ SOUP, and SOUP does not separate mail and news. You can
collect them in one go. Btw: SOUP has nothing to do with zip. SOUP
consists of an AREAS file plus *.MSG files, which can subsequently be
packed by any archive program.

From: mfeaver@s3.sonnet.com
Message-ID: <4hqt77$ddi@sonnet1.sonnet.com>
Source record: 149189

1. There is a DOS version of ESScode. Someone sent it to me, but I haven't looked at it yet. If you want a copy, I could send what I was sent (unchecked, don't even know what the filesize is).
2. Something is 'different' about ESScodes uuencoding, as 'Wincode' that I use in Windows objects, but is able to decode them anyway!
3. I think Wincode is available from Tucows Web site, at least I think that's where I got mine. Freeware or rather Postcardware. If not Tucows, you could do a web search for Wincode. It will also do most other types of decode/encode and works really slick!

Hope this helps.

4486. PLEEZ help with LYNX and MINT???

Newsgroup: comp.sys.atari.st
Date: 1996-03-09 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4hrbv3$a34@madeline.INS.CWRU.Edu>
Source record: 149191

I have finally gotten a version of Mint running in my ST (4MB,
16 MHZ) and have dip running to connect to my static SLIP
account. I also have LYNX, which runs, partially. The problem
as I understand it is that STOOPID MiNT has no more than
ST52 capability, and LYNX needs at least vt100 capability
to make bold and highlighted characters.
Am I wrong???? Is there some way to get vt100 capability
in MiNT????
Please, someone who has LYNX running on an ST with MiNT
tell me what to do?
I can also run ftp, now that I can connect, and I can
connect to all kinds of ftp hosts, BUT I can't download
anything. As soon as I try, the dumb machine tells me
"permission denied". What good is ftp, if one can't download
files???
Note:- there have been a lot of flames recently
about people who expect others to help them with programs
when they haven't read the manuals. Well, I have read (almost)
everything I could, and still can't find a thing. I have posted
three or four times at various phases of failure or success
in this endeavor, and the only response I got was "why don't
you try STiK and CAB. They're great." I had them since they first
came out and got them running with only a few problems.
(Except bugs in the early versions themselves.) The reason I wanted
LYNX is that I use it all the time at the lab, on my VAX,
and it does everything except get the pretty pictures from
Penthouse! And those pictures don't come out too great
on a monochrome Hi-rez, and are even worse than ST in color.
If I want pretty pix, I'll use my PC or my VAX.
Some kind soul, Please help!

4490. MG-FTP, how to get a file ?

Newsgroup: comp.sys.atari.st
Date: 1996-03-09 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <826476872_OASIS_@phil4.demon.co.uk>
Source record: 149195

I just got MG-FTP V1.3, and am having problems. All seems stable, except that: I can't get any files....

Once I go into say the pub folder on an FTP site, the only files that show up are the ls.zip similar directory lists, about 19Meg etc. And only 5 files, no other directories, esp those that I am looking for, and no other files.

I've tried it with both Imperial College, and Demon's FTP site... Nb. the show all files in prefs. is selected.

Also when it computes my email address it gets it wrong, is there anyway of setting a CORRECT one, that can be used every time ???

Thanks.

I'm looking for a Atari ST disk drive that is capable of reading
double sided 3.5" floppies. (720kb)

Please email to : kris@innet.be

4494. (no subject)

Newsgroup: comp.sys.atari.st
Date: 1996-03-09 00:00:00 UTC
From: smedley <smedley@gte.net>
Message-ID: <4hsq5q$iks@duey.gte.net>
Source record: 149199

FOR SALE - Two Atari TT030 computers

Both have:
4 megs ST RAM
TOS 3.06
720K floppy drives
modified parallel port driver hardware
(for longer transmission distance)

One machine is full US spec, and has a 60 meg hard drive.
The motherboard is revision H, for those who care.

The other is UK spec (UK ROMS & heyboard) with a US power supply.
It has a 120 meg hard drive. (I made sure this machine had the
larger hard drive to offset the minor inconveniance of the UK
keyboard.) The motherboard on this one is revision J.

Since both machines already have TOS 3.06, you only need an AJAX
chip to upgrade to 1.44 meg. (The drives are already 1.44!) I
never bothered to upgrade the floppy because I hardly ever use
floppies. BTW, Toad Computers has AJAX chips for $40.

PRICE - $450.00 each (including shipping in the "lower" 48 states)

I also have three AlberTT 1.2 video cards. They support one video
mode, 1024x768 with 16 colors, but it sure beats the TT medium
resolution of 640x480 with 16 colors! (You will need a monitor
that can support this resolution at a 48 Khz horizontal scan rate
to use this card.)

Price - $110.00 each (including shipping)

For one of the TT's and a video card, the price is $525.00,
including shipping.

Any questions? Contact me via e-mail at sirsmedley@delphi.com
or smedley@gte.net (I only check the Delphi address once or twice
a week, so for a faster response, write me at GTE.)

>I'm looking into buying an ICD Link for my ST, but thought I'd ask a few
>questions here before I did so, since the local (UK) dealers seem pretty
>unresponsive / underqualified. (Speaking of which - can anyone recommend a
>good UK ST dealer?)

Normally I'd say System Solutions but seeing as they want an extra 20
quid for the Link because they want to sell the Translator instead
then use HiSoft on 0500 223660.

>1) How well does it work on TOS 1.0? My ST is pretty old (although I'm
>looking to acquire a new(er) one if I can...) and since it uses 6 chip
>ROMs, it'd be a bit of a pain to upgrade them...

It's certainly possible but you must realise that most of this stuff
is not realative to the Link itself but your Atari, the Link is the
most compatible and quickest interface about for the ST. Compo sell
Tos 1.4 for 19 quid so call them for it as TOS 1.0 is slow, has a 16
meg partition limit (for 512 byte sectors) and is not as reliable as
it should be.

>2) Is it compatible with Syquest drives, including booting up? At the
>moment, the cheapest SCSI drive I can see advertised new is actually the
>135 Mb 3.5" Syquest. Since I won't need more than that amount of memory,
>the portability would be pretty nice.

I understand so, to your ST the Syquest or whatever is attatched is
nothing special, it's just a standard SCSI device. I would try to get
a normal low capacity drive if this is what you really want, removable
media drives are not really as reliable and are mainly meant for data
not regularly used for mass storage. And I actually have for sale a
170meg absolutely silent Quantum ELS170 (170meg) drive formateted with
loads of PD stuff on it for sale for 90 quid if you want to take it
and it's a great drive, I just needed more space in the end and it
still works wonderfully and you won't find anything cheaper, email me
if you need more info.

>3) Can it use PC compatible partitions? I use Macs extensively at work, and
>being able to move the SCSI drive onto a Mac and backup the data at work
>(or onto, say, a Syquest) would be extremely useful.

As said before with Tos 1.4 apparently any partition under 32meg
from a PC should work fine and if this is a Syquest partition then
so be it! If macs support PC drives via PCxchange or whatever it's
called then all should be OK.

I'm fairly convinced it's a problem at your (or) end as the same thing
happens to me almost 100% of the time, I think that it should add it
to your newsbase file and add the header info' to the history file
(which makes sense as why would anyone write software that has to
download the stuff that you wrote yourself!) but somehow fails, anyway
don't worry, after all you've read it already.

Never had that prob on my ST so I know nothing, Extendos is late in
the Auto folder but I doubt that makes much difference.

>2) CoNnect somehow thinks my User ID is different running Magic vs GEM, and
> thus, my reg # doesnt work.

It doesn't think it, it is! Connect allows 6 user ID's I guess it's to
stop people passing ID's on to other users with different machines,
email the authour or whoever you registered with and they'll send you
a new code.

The fastest and IMHO by far the best is Tempus 2 but thats commercial
although due to it's age it is probably available at a price
comparable to Shareware. Otherwise give Everest a go, it's a very good
one to try and is available by ftp from virtually anywhere. Also
Marcel may be a better choice, I only tried it one and it seemed OK
and IIRC it also supports RTF text so you won't loose any
bold/underline or anything when he exports so give them both a go and
take your pick.

: just because a few of the screws won't stay in. PLEASE HELP ME if you can.
: Thank you for your time.

The only thing I can think of is to either glue the cracked bits back
together and try that, or do that and then stick some epoxy or something
else to coat the insides of the holes and then rethread them. Otherwise
you'll have to leave the screws out. (There's not much harm in that
unless so many of them are loose that the case is apt to break if it's
moved around a lot)

PF> card is a 'Falcon Wings'
PF> from H&N. I've put 4x4MB simms on it (actually, the memory was
PF> taken from a Mac II).

Hi Pascal,
I've heard about some problems with the Wing-cards. They interfere with many things and I've heard about various solutions. They can even interfere with loading and saving if your luck has run out...
Someone told me it was a grounding problem in the construction and it would disappear if connecting a cable from a ground line on the Wing to the ground in the Falcon (the broad grounding line that goes around all of the PCB would be a good spot).
Someone else told me that these cards would work best with SIMM:s that have parity (Mac-SIMM:s usually don't) and they should be 70 or 80ns.
Luckily, now I've got a RAM-card with space for one 72-pin SIMM and it works perfectly and isn't any bigger than the original memory card...
Try these things and if you don't succeed, buy the 72-pin card instead.

Good luck!

Hi everyone
I have a falcon 030 without a FPU but with a lot of room in the
Hard drive.
I would like to get slip or ppp connection.
Which one of those system would you suggest me to work with?
Linux , sounds good but without a fpu? and I think it's hard to
configure it.
CAb and stick, easy but maybe too much randomize bombs.
Mint and mintnet ,why not, hard to set, and slow like hell!

So what do you think ? Am I right ?
What should I do ? Buy a PC just for the net, I don't think
so. Thank you.

Prism paint does this quite well, though naturally the pictures are a lot
smaller than your PC drawn gif ... with less colours....it will only
import pC gifs in mono... but will output Atari drawn ones in colour..

I'm looking for a cheap host adaptor so I can get a hard drive working for my dad, and get mine back from him! ;) I would like the total cost to not exceed $40. I'd prefer an ICD so I can use the exellent ICD software (I don't have Pro), but any other kind will be OK if the price is right. It also needs to include an ACSI cable, they ain't easy to get locally here in the US... :(

>from HD Driver --> ICD.

The main reason that I swapped from ICD was that I was told it had
added Zip support & worked under MagiC fro background DMA. The 1st
isn't true and the 2nd doesn't become apparent on my STe. It IS
however still a good idea to get it, It's fairly cheap, a little
faster, far quicker to initalise on bootup, removable media does not
have to be inserted on bootup, bus arbitration (you can now use
Fireballs and connect 2 computers to one drive), drive write
protection and a few more things.
It doesn't have all of ICDs utilities but you don't really need them,
generally it is better than ICD but not a 'must have' app.

I believe that the biggest advantage of using HD Driver is the fact that
it does/allows SCSI Bus arbitration under MagiC. I think that means that you
can still use the OS during file accesses but anyone is welcome to correct me.

the question if NOS will work on 115k2...
the answer is yes, I use a 115k2 modem with a SLIP connection.
I use STIK to dial (and get the IP address) put the IP in startup.nos and it works.
I never got the IP address out with NOS, and putting it there afterwards NOS ignores it..

From: dhbutler@stat.mps.ohio-state.edu
Message-ID: <4hv280$qf5@osustat.mps.ohio-state.edu>
Source record: 149327

I've been playing around with the whiteline Linux cd for a couple weeks now (it took me that long to get it to install because of SCSI bus 'timeouts'! I eventually had to copy all the install files off of the CD and onto a hard drive to get it to install...) I'm by no means a unix guru, I'm only passingly familiar, but I've run into one problem that seems related to the whiteline install routine. Whenever you try to launch xwindows, it gets part way there and returns an error that the mouse driver is already in use and cannot be loaded (that is the general idea, I can't remember the specific error). Since I have not modified anything since the install,this would seem to be an error in the install itself. Anyone gotten around this problem?

Thanks to everyone for their helpwith my other questions!

No problems at all, but you'll probably find that the hard drive begins to
boot quicker with a (formatted) floppy in A.

Speak to 'ya later!

From: ashort@mettav.demon.co.uk
Message-ID: <10003_ashort@mettav.demon.co.uk>
Source record: 149332

This message from mike@coconut.demon.co.uk to All was spewed forth...

m> If you are selling anything Atari, why not put your country (UK, USA
m> etc) in the subject line. I have lost count of the times I have gone

This is a good idea, but there could be a small drawback in that people already put the country in the subject line if they only want to sell their goods within that country. Therefore if someone sees a message with "USA" in the subject line they may think the seller only wants US customers..... but that isn't the case because, under your idea, he only put it there for the benefit of the *buyers* who only like to purchase goods from their own country.. :|

So the person selling the goods may loose potential buyers from other countries who have read the "USA" in the subject line and think the goods are US only. :(

>trying to get a copy to test that the messages go unanswered as it
>relates to testing the program out . I personally until Dave in
>messages I have sent him tells me specifically that :

OK, lets put a fwe things straight.

I (Phil Yeadon), not Dave, selected the Beta testers. All the people
who had made the effort to Pre-Register were given the opportunity to take
part. People were selected onthe basis of what machines/setups theye were
running, this was done to give us the best possible range Ataris to get
OASIS and ICE tested on.
The number of Beta testers has been limited to 6 people to save myself
and Dave from dealing with a whole army of people.
I know many people have been asking for test copies, and I have turned
them down for the reasons given above. I object to the statement that I
leave mail unanswereed. I have always answered every mail I recieved
regarding OASIS (excpet for the last two weeks, because my modem was blown
up by lightenting).

>1) It works under Magx 4.0

Perfectly. I ran ICE to download my news and mail, when the mail had
finished, the news was still downloading, so I ran OASIS and started reading
my mail while ICE carried on downloading my news.

>2) Has Spider included

Spider has not been started yet, that much effort has gone into
OASIS2/ICE that I have not had the time to start Spider. As soon as
OASIS2/ICE is released I will start Spider and release it free to anyone who
has laready registered OASIS2/ICE by then.

>3) Is more stable

The testers seem to think so.

>4) I can chose the messages : " I " want to download

Yes, you define which news groups you download only the article headers
for and then choose which of these headers you want to download the full
article for. You can infact tell ICE to download all the headers a service

provider is holding for a news group, disable a news group without removing it from your active list and change the date the news was last downloaded, all this for each newsgroup.

>I will not be and I hope no one else will send any money until these >questions are answered once and for all .

That is of course your perogative.

>As for the so call Beta testers quit the tease about Version 2.0 if >you are not suppose to talk about the program and it's features THEN don't >waste my and everyone's time till it is released . Then and only then >will we see if it is better or not . But by the sounds of it I don't >think it will be any different then now !

OASIS 2 looks basically the same, but with a lot more features added. ICE however is a different story. ICE has a fully GEM user interface while carrying out a full TCP/IP interface withthe 'net.

>Go ahead Dave and the so called Beta testers make my day . It's in your >court now ! Make it a good one now . >TTYL Rick a want a be Beta tester !

I seem to remember having this discusion with Stephen Mulrine and a few other people about 8 months ago. At that time we were told that what we proposed was impossible. There again so was a Web Browser until CAB came along.....

Katherine L Ellis (kellis@mtholyoke.edu) wrote:
: Hi everyone
: I have a falcon 030 without a FPU but with a lot of room in the
: Hard drive.
: I would like to get slip or ppp connection.
: Which one of those system would you suggest me to work with?
: Linux , sounds good but without a fpu? and I think it's hard to
: configure it.

Linux won't run without a fpu, and you'll probably need more than 4Mb Ram to
do seomething useful.

: CAb and stick, easy but maybe too much randomize bombs.

Very unstable, and IMO unusable.

: Mint and mintnet ,why not, hard to set, and slow like hell!

It's not hard to set up if you get one of those kits (KGMD, TAF). I installed
the TAF-package and removed X, it works very well with MultiTOS. It's slow,
but that's MultiTOS's fault. CAB works fine under MiNTnet, much better than
with STiK.

: What should I do ? Buy a PC just for the net, I don't think
: so. Thank you.

If you're that desperate, buy a Mac. That way you get the best of both worlds,
great internet-connection (Mac) and TOS-compatibility (MagicMac).

well if you are asking for a bodgers perspective on this unfortunate incident
then stuff something into the holes in the top case (I find matches are good
tools in this respect !) maybe with a spot of glue in there ...NOT superglue
just white stuff .. the professional way I guess is to either put some sort of
tapper in the hole or use outsized screws ??

> to make bold and highlighted characters.

something is not correct in the above as I have lynx and Ncftp
running both with Bold and highlighted text. I use toswin to
run my shells though and the tw52 termcap , maybe that is why
although I think maybe it is ncurses library you need ?

> I can also run ftp, now that I can connect, and I can
> connect to all kinds of ftp hosts, BUT I can't download
> anything. As soon as I try, the dumb machine tells me
> "permission denied". What good is ftp, if one can't download
> files???

the permission denied problem sounds like the directory you are
tring to download file to is not writable by user who is ftping
i.e you. Note only ROOT user can write to TOS drives. if you are
running on a minixfs then download to you home directory and
ensure that it is chmod 777. If you are not then make sure you
are root user or have root user rights.

Alastair doesn't count B^{)

m> Is HD Driver worth owning?

If you want to use background DMA in Magic 4, if you want the speed and reliability to use Outside virtual memory, if you want to do direct-to-disk recording to work reliably, if you want more than one machine to access the same HD reliably and if you want up-to-date and regular support, then yes.

If not, no.

4537. upgrading a 1040ST

Newsgroup: comp.sys.atari.st
Date: 1996-03-10 00:00:00 UTC
From: wknaka@saul5.u.washington.edu
Message-ID: <4hu6tr$km1@nntp5.u.washington.edu>
Source record: 149342

Hi guys, it's nice to see that there are still Atari users around!

A little while ago I dusted off my Atari 1040ST and started to play around with it. I realized it was still a great machine and would be a lot of fun to fool around with. I also thought it would be good for learning the intricacies of a computer, since it would be an easier machine to learn about than say, a PC (I have some 68008 low-level hardware experience).

The computer:
1040STf 1MB RAM
TOS 1.00
SC1224 monitor
14.4 modem (well, it actually belongs to a Mac, but it hooks up just fine to the ST - but I've heard there're some problems with high speed modems and the ST?)
NO hard drive

To become a useful machine, I decided it would need some upgrades. Keep in mind that I do have another computer, a PC (boo! hiss!), and the ST would be purely for "hobbying." So I've *got* to keep the cost down (I'm a student).

Anyway, here's what I've got planned so far:

TOS 1.04
Toad sells it for $59. Anyone know of anyone else who sells it, and how much it costs?

Also, anyone know a quick way to determine if it is on 2 chips or 6 chips? Was TOS 1.00 always on 6 chips? I took the cover off the ST, but there were lots of fasteners which were made of metal, which you just bend back and forth, so I didn't want to take them off unless it was absolutely necessary.

ICD Link II ST->SCSI adapter
I can't seem to find any other ST->SCSI adapter, even though there are about 2 other brands listed in the ST FAQ (which, by the way, was pretty difficult to get hold of).

Now, some questions about this. I was planning to hook the ST to a SCSI Zip drive. Will there be any problems with this? I realize it'll be slower than a regular hard drive and probably not as reliable, but I've already got the Zip, and ST-ready hard drives are expensive. Would I be able to boot off the Zip? I've heard people talking about the Zip not working, but I don't see why it wouldn't. I've also heard talk of 32MB maximum partitions, PC-readable drives,

ICD/HD Driver drivers, and other stuff. Basically, what do I have to worry about?

Toad sells the Link II for $99. I can't find anyone else who carries them. Are there any other dealers who have them, and how much do they cost?

(a little later) A monochrome monitor
The 640 x 200 resolution can be a bit tough on the eyes when doing any amount of text work.

What's a good price for a used one? There is a local Atari store that's barely hanging on that has a bunch of used ones for $125.

So, what do you think? What advice/hints can you give me?

Now, some software questions ...

What would it take to run MiNT? The ST only has 1MB of RAM, and any RAM updates will probably have to take place in the future. It's not absolutely necessary to have a unix-like system (although it'd sure be nice!) If MiNT is not an option, is it still possible to get a command-line interface (csh)?

What does it take to run gcc? I'd like to be able to develop in several languages. What are languages are out there? What's available for free? Is there a good assembler available?

How about emacs? I *gotta* have emacs! The latest port is an 18.xx version, isn't it? Is anyone working on a later port?

Now, there's TOS, GEM, GDOS, GEMDOS? ... what else? I understand TOS and GEM, what's GDOS and GEMDOS? I ran a sysinfo program, which said I had a version of GEMDOS installed, and no GDOS. What are they?

And finally, what's the general health of Atari? I'm talking about the number of new machines sold, number of users, new applications, etc, not the company itself (I heard about the merger, etc). Just wondering, since it'd be sad if Atari was forgotten (I own 2 Atari 8-bit machines too).

After I installed Ease, the CD Rom is now available from the desktop.
It must be a configuration discreptancy with the MagX! desk.

Mike

After just getting off the phone with Michel, he has told me that the
latest version(s) of ESSCODE PC for Win 3.1/95 is 7.5, You can get the
Win 95 version from: ftp://ftp.winsite.com/pub/pc/win95/sysutil/ecd75w95.zip,
and you can get the Win 3.1 version from ftp://ftp.winsite.com/pub/pc/win3/
util/ecd75win.zip.

I hate to write this but AFAIK there ain't a "good" one available at all - sure there is FTREE 2.1 (the best one IMHO), Family Roots, GENEA and some others but none of them support GEDCOM (a standard genealogical database format) or have decent report generators. Brother's Keeper on the PC is the best shareware around (ghastly interface but it has the features you need), people rave about Reunion (for PC and Mac) - that is probably the best one to check out if you are serious about the subject. If you only want to play about use FTREE, but be prepared to retype all that data later on.

(sigh)

ICD removed the boot partition limit somewhere around driver release 4.8,
years ago. They didn't remove it from their manuals, though.

The boot partition may be as big as all others, i.e. 256, 512 or 1024 MB,
depending on your TOS version.

bye, Peter

4543. MG-FTP Bugs Found

Newsgroup: comp.sys.atari.st
Date: 1996-03-10 00:00:00 UTC
From: diehl@io.org
Message-ID: <4hv3oo$hr6@news1.io.org>
Source record: 149348

Here's a list of bugs I've run afoul of in MG-FTP 1.03:

- Doesn't like a certian program in my AUTO folder; its bombs when it tries to connect to a server if this program is active. (Testing incomplete as yet, so I'm not certain which program it is) I ran MG-FTP on a semi-clean system (only JARxxx, Turbo ST, UIS III, TOS14FIX and HSModem were active) and did not get any bombs.
- No matter what file I click on when on an FTP site, when I click on GET, it always tries to send me the first file in the list. (eg. on ftp.netnet.net in /pub/aminet/mods/pro, clicking on any file will result in MG-FTP trying to send me 1-house.readme, the first file in the list) This may be related to the medium res RSC problem below.
- If there are a lot of files in a given directory, all of them may not be shown. The list stops when the scroll bar hits the bottom, even if there are more in the list. (Open ftp.netnet.net and go to /pub/aminet/mods/pro for an example.
- The resource file looks terrible in ST medium res. Text overlaps divider lines, file icons overlap each other, buttons overrun window borders, editable fields overlap buttons, and so on. I tried editing the resoure with Interface, but the library used to create the resource files is incompatible with Interface, so I can't properly edit them. About all I was able to do in Interface was turn the file icons into half-height icons and resize a few of the buttons.
- Not a bug, but rather a mild annoyance: That "SysGem is Keyware, please register" alert box; isn't it MG-FTP we're supposed to be registering, not SysGem?

Has anyone else experienced any of these problems? For reference, I'm running on a Mega ST4 w/ TOS 1.04, 4 megs RAM, and colour monitor under NeoDesk 4.03.

>that you can still use the OS during file accesses but anyone is welcome
>to correct me.

Can't mix SCSI features up more than this.

HDDRIVER can do background DMA when run under Magic.

Bus arbitration is a SCSI protocol phase any driver should do, assigning the bus to an initiator and a target and locking out all others. Drivers that do this have to bring an initiator's SCSI ID. HDDRIVER also does this on "real" SCSI ports, i.e. on TT and Falcon. This makes drives like Quantum Fireball or Empire run. TOS boot code doesn't do it, so you still won't be able to boot from such a drive.

bye, Peter

Um, how do you expect it to 'render' in 4 colours? WWW pages use either GIF's
(up to 256 colours) or JPEG's (16.77 million colours).

Dithering is just a method of reducing it down to a manageable number...

Oh, and CAB is NOT the bit that connects to the internet - you can use it
with PPP if you use MintNET (but this is harder to set up then Stik, I
believe)

Source record: 149207

For several times Itried to use the famous NOS programm , but it doesn't work on my old MEGA-ST.
Maybe my dialfile is not configured right. I read the documentation, but it's very kryptic to me. does anyone know how to connect to the tu-berlin Net with this pretty programr David!

For several hours (not to say for days and weeks) I tried to

connect my ATARI-MEGAST Computer with your famous NOS

programm to the internet. Sure I am not a Computer wizard,

but I don't get the chance to become one, because on my

University (TU_BERLIN) I can't connect. Maybe it is the

startup.nos file or the dial.txt file that does not work. The

Modem dials, but it does not recognise the servers prompt

(ts2>), wich I wrote in the dial file. It didn't even send

the slip or ppp command and so after a few second it timed

out. In our University we don't need a password for the

domain connect.

Please send me a help or a dial file that can work, otherwise

my MEGAST (and I really love it) will fly through the window,

and Iwill get a MAC (or 4a DOS PC).

Bye Christoph Chi

PS: My dial.txt

#

It was very interesting reading your reply but let's get a few things
straight .
1) You state point blank that it works under Magx 4.0 well I can tell
that on my Falcon it doesn't . But if I put a line in my clipboard
and call it in Nos it does . This is not what I would call working
under Magx !
2) The e-mails I have sent you inquiring about this new version you
always ducked any questions about it's features but otherwise than
that You always replied .
3) The fact your 6 Beta tester's by your own admission " The testers seem
to think so " I wasn't expecting them to say otherwise .
4) The fact no web browsers existed on the Atari platform when Oasis
first came out is very true But now we are finally starting to get
a lot of alternatives ie : Stick & Cab , Mintnet & Cab ...
We are very pleased that you did take the time to come out with
your program but the delay of Spider is becoming the very reason
why people are switching to other software . When you brought out
version 1.35 you stated point blank that No other work on Oasis
would be done because you wanted to concentrate on Spider maybe you
should follow through with this as this is only thing preventing
Oasis from being a complete internet package .
Again , thanks to you and Dave for the new version and finally when do
the rest of Us peasants get to try it out ! TTYL

Howdy, Josua! Nice to hear from you. :)

>> To all you atari programmers out there: Why is there no
>> easy-to-setup-and-use (I hate to use the PC term "Plug and
>> Play" or "Setup Wizard") Internet PPP (actually any protocol)
>> software? I have tried setting up the following (and failed

JD> The above in fact sounded like a general accusation of the
JD> Atari community. My intention to help faded away while reading
JD> that article.

As an Atari consumer, I could very easily have written those same words. I'm just plain stumped to see any malice, insult, or whatever, in his words??? I say this _not_ to disagee with you, but to try to find the insult, so I (& perhaps others) do not somehow also insult anyone??? I'm just lost here?

JD> prepared to overcome any obstacles. Well, I met some of them
JD> :-), but would it have been an intelligent approach to curse
JD> the programmers or even my STFM?

Well, I've sure cursed all 7 of my Atari computers at some time! :):) And I've done my share of cursing unknown programmers, too! :) I'm sure most programmers have done their share of cursing 'stupid, lazy' consumers, too! :) :) In fact, if I really tried, your & Martin's replies could almost appear insulting to us software consumers... That was not, of course, the intent of either of you, and we're all just having a pleasent conversation here... :)

I don't see where Julian cursed anyone, he just asked if anyone will write a program on Atari that will dial up the Internet & go, no muss, no fuss. I was looking to trade my Atari for a clone for the single reason that I wished to surf the net. After reading a Computer Shopper (large USA clone magazine) comparing the available IBM clone 'Net packages, I realized it's not so easy & stable on that platform either, and instead I am getting a used Falcon & hope that the CAB/Stick package will mature in the next 6 months. So, maybe Julian is asking for the impossible. But I just don't see where his question was an insult? :)

> I just un-compressed NOS today from the Compendium CD-ROM. The
> doc folder contains 1.5 megs of text files. That's just _one_
> of the packages.

JD> Just 300 to 400 kB are really necessary for setup. By the
JD> way, in that package you get an in depth step-by-step guide
JD> for usage PLUS a fine reference manual PLUS a nice book about

JD> internet basics. The other packages don't contain that much
JD> documentation; for the basics you can always consult the NOS
JD> docs. So be glad you have them.

I truely am glad to have all that info, and you notice other than a very basic question (what 'Net progs _are_ available for the ST?) I haven't asked for any Internet help around here? :) But any way you cut it, 1.5 megs of text is a lot to search through, if all I want to do is configure a software package to surf the net. Now, I'm not complaining to anybody about this! :) I just wish there was a piece of software out there I could buy, set up in a couple of minutes, and start surfing! :) That is my goal, & like Julian, I'm just wishing out loud. No harm, no complaints. As I explored this issue, I see there really isn't such a program available for any platform, so I may not have worded my comments _exactly_ as Julian did. But hey, all we hear in the mass media is the wonders of Netscape, and how cool hooking up to the Internet is ... How can you blame the guy for wishing for the same thing for us Atari users? On here we see lots of problems using Atari on the 'Net. It might not be true, but it _appears_ the 'Net is easy on clones, impossible on Atari :)

JD> I tell you what: after me having set up all three ST internet
JD> packages there are PC users who ask ME to fix their winsockets
JD> and netscapes and I can help them !!!

A big :)!! I've set up many clone systems (not 'Net, but hardware & software) for people, & never have owned one! So I hear you on this! :) At this point, the $$$ is quite high for me to access the Internet, & I'm really wishing for a stable software package, to eliminate the _beta_ part of this equasion. I hear it's coming as fast as it can, so pardon the enthusiastic (if awkwardly stated) crys of, "Hurry up!" :) :) :) :)

I don't know about that! Try throwing bigscreen in your auto
folder and running CAB on a color monitor with a high rez inf file! You
can set it to display 16 colors on a 648X400 or real close to that! I
will not say that it does anything for the stability of CAB online!
KABOOM! quite a bit more often than usual 8-) but offline, it show the
picture better than any way else I can find on an STe! Of course you
really only have a 320x200 window on this large screen so you have to
scroll around, which makes text kind of a hassle to read! To bad I can't
read Chinese! I'm just surprised it worked at all!

4560. Speed Test- TOS 4.04 vs MagicC 4 suprise winner

Newsgroup: comp.sys.atari.st
Date: 1996-03-11 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <Do3nAz.M4K@ridgecrest.ca.us>
Source record: 149217

Just the facts, mam.

I thought MagicC 4 was suppose to be faster than
TOS 4.04 on the Falcon. At least that's what I read.
Fantastic product however. My opinon follows data
(for what it's worth).

The <BOTTOM> line :) If you need to multitask, get it. It's glactic eons better than MultiTos. It's one of the most bad assed thing's I've ever seen for an Atari (except for MagicC Mac). Use MagX! desk and don't waste your money on Ease. Ease is the bitchinist desktop replacement for the Falcon, but, IMHO, you HAVE to be able to switch resolutions without writing to your mother. At least I haven't found an easy way to do it. Thing is not bad, but crude in apearence compaired to the TOS 4.04 desktop. And if you really have to have it, make sure you pick up a 14 meg simm card (with simm) and a Speeder card of sorts <WITH> fast ram. (NOT POWER UP2!). I didn't try running under a stock configuration, and by the looks of things, I don't think I will try. Whatever you do, DON'T burn it into you only eprom unless you have a spare. You will want it. There are many technical aspects that MagicC brings to Atari computing, many of which I know nothing about. I just talking looks and speed here.

V4 Test Part 2. MagicC 4 and the T-36 36mhz 68000 MegaST.
Comming Soon (after I get some sleep).

> configure it.

Linux won't work at all without an FPU.

> CAb and stick, easy but maybe too much randomize bombs.

CAB and STIK are being improved all the time; I don't use it myself
but the reports here on the net are varying. For some people it seems
to work without any problems, others have lots of trouble with it.

> Mint and mintnet ,why not, hard to set, and slow like hell!

Hard to setup - Well, if you use a complete package (like KGMD, if you
can read German) that's not too much of a problem. If you know a bit
about Unix you might be able to figure things out quite fast. I
seriously doubt whether MiNTnet is slower than other solutions.

If you don't know anything about Unix and only want to look around on
the Net, I guess CAB/STIK would be the best solution. At least until
an English, simple-to-install MiNTnet-distribution ever comes around.

Regards,

From: steve@msl203.world
Message-ID: <STEVE.96Mar11153351@msl203.world>
Source record: 149220

Hi!

yesterday late at night it happened: all the FAT's of my harddisk
were killed (please don't ask why or how, that would be too
embarassing for me). Anyway, since I realized that I probably won't be
able to restore all my data (right?!), I'd like to know if there's a
way to restore some data (textfiles) by some nice utility?!

Please mail answers to heuel@ipb.uni-bonn.de - or in this newsgroup.

Thanks for your help.

Did you try ConNect? I have been using it for the past several weeks and
find it to be excellent. It supports its own internal transfer
protocols, or calls external programs including kermit, it also has an
excellent screen interface and runs under mint, geneva, Magic etc.

Finally it runs on my falcon without a hitch. Registered version will
even fax for you.

> the Sampler and the ST to the same drive at the same time.
>

What I am after doing is using the Supra SCSI interface to send samples
from the ST to the sampler(using software like zero-x), not for the
sampler to be able to access the Hard Drive.

```
-------- ----------------- ____________
|Atari |dma>----|Supra Interface|SCSI>------|Akai S2000|
-------- ----------------- ------------
DMA
V
|
HARD Drive
```

But also allow the st to access the hard drive

Thanks

bren

Michael Grove <mgrove@owens.ridgecrest.ca.us> writes:

>[Two big GemBench logs deleted]

How on earth do you expect MagiC, or any other OS, to make your CPU
faster? Given the tests you did, I would expect to see MagiC slightly
slower than TOS, as it will attempt to give time to other tasks, and that
is indeed what you see.

The claims that MagiC is faster than TOS _are_ in some ways justifiable;
faster display routines, faster disk access etc, but you didn't test
those things.

you!

Hi Tom,
Just a note that both ExtenDOS & ExtenDOS Pro are commercial products of
my company, Anodyne Software, so please DO NOT REDISTRIBUTE! Upgrade
patches such as edos_122.lzh are, in general, freely distributable,
since you need the original program in order to use the upgrade.

If you find that ExtenDOS is a downloadable file on your BBS, please
delete it. Also, please confirm the filename and/or number on GEnie that
you think contains ExtenDOS, and I'll check into it.

Thanks in advance for your assistance,
Roger Burrows / Anodyne Software

> I have sttar.ttp and gzip.ttp and I can't decompress the gz files
> What should I do . What parameters ? the documentation are not
> really clear.

Depends on what you've got to decompress.

If it's a foo.tar.gz or foo.tgz file there are these possibilities to extract
the stuff:

- gunzip foo.tar.gz; gtar -xf foo.tar
first unpacks the file then untars it
- gunzip -c foo.tar.gz | gtar -xf -
the same via pipe
you may also use gzip -d instead of gunzip

- gtar -xzf foo.tar.gz
works with newer versions of GNU tar which invoke gzip with
the -z option

If it's just a foo.gz file gunzip should do the trick.

>US only. :(

I don't agree. When I, as a potentional buyer, see the country USA in the
subject line, I can still choose wether I would like to look at it anyway,
for instance because shipping software wouldn't be so difficult. However, I
might not want to take the trouble. But hardware ? Shipping is yust too expensive!
I do believe the seller can mail his message with a distribution command, so
instead of world he could say US or USA (I don't know that). And _that's_ the
way the seller can make sure only american people will respond.

I posted the same idea twice allready, but nobody responded. And I'm sorry,
but I find it a bit irritating if I have to go through 10 FS-messages to find
that I can't buy any of it anyway because I live too far away.

Sander.

Maybe Your provider uses compressed SLIP; but remember that STiK only supports
uncompressed SLIP. In that case, You should ask Your provider to change to

Try removing the line 'wait 7000'; when 'ts2>' is received, the
dial script is most likely just waiting and not listening for it.

wknaka@saul5.u.washington.edu (Wes Nakamura) asked politely:

WN> TOS 1.04 Toad sells it for $59. Anyone know of anyone else
WN> who sells it, and how much it costs? Also, anyone know a
WN> quick way to determine if it is on 2 chips or 6 chips? Was
WN> TOS 1.00 always on 6 chips? I took the cover off the ST, but
WN> there were lots of fasteners which were made of metal, which
WN> you just bend back and forth, so I didn't want to take them
WN> off unless it was absolutely necessary.

I *think* tos 1.0 was always 6 chips. You are going to have to pull that shield to replace tos anyway, and the machine will run fine without it (a little rough on local tv reception, though), so you might as well pull it now if you are going to upgrade. Any Atari dealer can sell tos 1.04; $60 is the usual price. If you can find it used you might save a little.

WN> (a little later) A monochrome monitor The 640 x 200 resolution
WN> can be a bit tough on the eyes when doing any amount of text
WN> work. What's a good price for a used one? There is a local
WN> Atari store that's barely hanging on that has a bunch of used
WN> ones for $125. So, what do you think? What advice/hints can
WN> you give me?

With all due respect to your local 'hanging on' Atari store, $125 is too much. Check the for sale posts here - the prices range from $30 to $50, and sometimes more. Since you are pressed for cash, why not offer to trade your color for a mono? Somebody might bite, and the color monitor ordinarily goes for more.

WN> Now, there's TOS, GEM, GDOS, GEMDOS? ... what else? I
WN> understand TOS and GEM, what's GDOS and GEMDOS? I ran a
WN> sysinfo program, which said I had a version of GEMDOS
WN> installed, and no GDOS. What are they?

GEMDOS is part of the TOS/GEM system software; it is installed in the machine already. GDOS, Graphical Device Operating System, on the other hand, is the software that should have been on our systems, but only lately is available in decent, usable form. Its generations are: gdos 1.1, fontgdos, fsmgdos, speedo gdos, and NVDI. I am currently using speedo v4 from about 1993, which is a heckuva lot better than v1.1. NVDI, a commercial product, is alleged to beat speedo's socks off.

WN> And finally, what's the general health of Atari? I'm talking
WN> about the number of new machines sold, number of users, new

WN> applications, etc, not the company itself (I heard about the
WN> merger, etc). Just wondering, since it'd be sad if Atari was
WN> forgotten (I own 2 Atari 8-bit machines too).

What can I say? There are still excellent applications being written and made available, but the ST hardware has been pushed to its limit. There is simply no way that a humble ST can run the most modern graphics and sound applications - not enough horsepower. More and more of the modern apps being written are for the Falcon, or depend for decent speed on more ram (4M is a nice, round number, but there are larger ones), a hard drive, and/or a 68030 or better processor.

The Atari *has* been forgotten, in the US, anyway. You don't know how lucky you are to have any local dealer at all. The platform is still being worked on, developed, and used extensively in Europe, among other places. But in the US, the market has almost reached the implosion stage, where a dealer cannot survive because used hard- and software is quite readily available, and he can find very little new stuff to sell. Toad, and a few others, have succeeded, partly by diversifying, partly by offering splendid service, partly by shifting their emphasis to the 'serious' user, and partly by catering to the diehards like me. But if any Atari computer dealer attempted to 'hang on' by selling new computers and new games for them (the mainstays of computer commercial activity in the US), he would quickly go under for lack of stock, and the lack of customers who would pay the prices that he would *have* to charge.

All that said, the serious, 'hack at it until the @#$%^ thing works' type users in the US and elsewhere are having a ball with the Atari ST, TT, and Falcon; and we dream of the day when we can afford one of the newer hotrods being developed and sold. We are in awe at the people who program the 'impossible' for the ST, and apps that are second to none on _any_ platform. My hat is off to the authors of STiK, CAB, CAB.OVL, and MGFTP. And Twist 2, and Papyrus, and....

I know, I know. Remember that I have to put up with messages slagging STF off every time I stick my nose in here, though. I accept constructive criticism in the spirit it's intended, but when certain people (they know who they are) seem to delight in throwing enough s**t at the wall to make some stick, it wears me down.

>title. Nobody want to push Format over the edge, surely.

Not true, believe me. I've heard it from the horse's mouth, so to speak.

>subscriber fiasco does nothing to inspire confidence in the readership.

You won't find any argument from me. Latest word is that subs can be arranged by phone, though, so Future haven't stopped all subscriptions.

>London these days), and some kind of price rationalisation (how much would
>losing the cover disk save?) I'd be halfway convinced. But until then I

Not much in terms of cash, AFAIK. I'll check on this and see if I can get some figures. Possibly it's time to run a survey again in the mag to see what the general readership thinks about losing the disk. I know online readers always tend to sneer at coverdisks as we get software much earlier than a disk does, but a large proportion of our readers still want the disk, and regularly say so.

>too will only believe the evidence of my own eyes. Stacking the latest

>any other machine. If you want to show the mag's support for the Atari
>community and Future's commitment to the mag, here's a little somewhere to
>start, surely?

I spoke to Futurenet's webmaster about this the very day the password system was implemented. I've repeatedly asked again and again, and even

offered to mirror the entire set of STF pages in my personal webspace. If it's really that much of a problem, I'll just go ahead and do it, whatever the big boys say :) In the meantime, if this helps, I've registered a "generic" account on Futurenet which you can *all* use to access the pages. Either navigate the registration boxes with the username stformat and password stfguest, or access the URL directly as follows:

http://www.futurenet.co.uk/,stformat,stfguest,/computing/stformat.html

I'll keep you posted on the mirroring situation. I'm also kicking up a fuss to take over the maintenance of the pages, since they're lagging badly behind the rest of the site.

4585. Falcon drive problems

Newsgroup: comp.sys.atari.st
Date: 1996-03-12 00:00:00 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <96072.153149STIRRE31@MAINE.MAINE.EDU>
Source record: 149108

Well, this has been a problem that has been occurring for awhile
now and I haven't gotten around to asking. It seems that my
Falcon's internal disk drive loves to corrupt disks. I am not sure
why. The only thing that I have done is check its speed which
is correct (I used an old STart utility by David Small). What
other possibilities are there? For the most part, the drive
works fine but much too often I get the dreaded "Data on Drive A May
Be Damaged." My master disks for NVDI 3 and Power and the Gory
no longer want to work. Luckily, I made backups. Can anyone
give me some possibilities as to why this is happening?

Close.

Gzip only compresses one file, so it's no good for distributing a package
of files.

Tar only archives, it doesn't compress the archive, so the .tar file tends
to be a little larger (because of the header) than the files in it.

So almost all unix programs are tarred and then gzipped, giving them an
extension of .tar.gz or, on filesystems that don't like long filenames,
tgz They can be compressed and decompressed in one step on a unix box
as tar will automatically call gzip if necessary.

heheh as Far as I know nobody put a bit of code in there saying crash
with the greenpeace web pages :))
It might be that stik is having a problem resolving the site whats the
url and I will take a look sometime and see whats going on.

Well first you have to open your computer and change the direction
of your leads and it should be ok.You have to bend them in the other
side.

```
---------
| power |----HD
---------
```

The leads between power supply and your HD. There's a magnet around'em.
Bend them down and not up like they are originally.
I hope you'll understand what I mean.
You can also download a shareware from cnam 'Zorg-195'
It's a really good program to restore and to know what's going
on with your Hard drive.
Email me if you've got a problem.

4590. A dumb Gem Bench question (was speed test.....)

Newsgroup: comp.sys.atari.st
Date: 1996-03-12 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <Do5y0B.93I@ridgecrest.ca.us>
Source record: 149113

Ok, now i'm catching hell (or heck) for compairing
MagicC to TOS in the speed of execution department.
I am no programer, but I have done more hardware mods
than most. I know when something runs fast on my machine
and when it dosen't. My understanding of Gem Bench was
that it used the operating system to perform it's checks.
While I wouldn't expect the CPU/FPU to vary much
the ROM access does, and should show a big speed difference
as in my test TOS is loaded in fast ram.

Is the speed difference solely because of that, or because
of size or codeing or whatever in MagicC
(whatever was not the issue, only the benchmark)?

Never the less, on this peticular Falcon, MagicC does feel
a little slower, almost the differance between 16 color mode
and 256 color mode on the Falcon (almost).

On a T-36 36mhz 68000 in a MegaST with MagicC4 and NVDI loaded
the ROM access are the same with Magic as they are with
the FastTOS switch set on the board. I am told in this setting
the ROM is accessed at 70ns, actually faster than my RAM.
MagicC is able to read from RAM at least as fast.
In this machine, this is nice.

Mike

If you'd read the toswin documentation you'd have seen the bit where
it mentioned all their additions to VT52, such as bold text.

If by highlighted you mean reverse, standard VT52 does have that of
course.

Hi John and Paul

Thanks for the responses, and the suggestion as to why I didn't download my original posting. It's only happened twice, and it's not a major problem, and hopefully Oasis2 will have it sorted out :-)

I could post it locally using the option in Oasis, but I prefer to download my own messages as a check on whether or not they got uploaded in the first place ;-)

Anyway, thanks once again gents.

> How can I deal with that ?
> I know how to decompress zip,lzh,arc,zoo,msa,arj and that's all.
> Thank you to help me.

.gz (as far as I know) is a Unix compression method. There's a program
called GZIP.TTP that should be available on any of the usual atari
archives (such as atari.archive.umich.edu). It's used (presumably!)
because the file transfer computers are Unix and so they have been
compressed by the Unix machine.
It's good also to have a program (such as DETAR.TTP) for the .tar
compressed files - .tar is another Unix method.
Hopefully you won't come across any programs that are .tgz which
involves doing a decompressed .tar and then a decompressed .gz !!

I've got an all original Atari Falcon 030 for sale with 50Mb (I believe that's right) internal hard disk, VGA adapter, and mouse. Have the original box, documentation, etc. This system has seen VERY little use and is literally like new. It's been in the box for the past 6 months and it's time someone else got some good use out of it.

Make me an offer.

Ok im after your default.cfg and dial.scr for your providers for a new
www package to be released soon.. so if you have made a set of config
files for a provider other people may find helpful then strip them of
username and passwords and mail them to me with a little descript.txt
file in a uuencode telling me which provider they are for.
Send them to stik@flinny.demon.co.uk I will mail you saying if I
received them or not.

Thanks,

Flinny.

Help!
I am running Lynx with mint. (I just recently got it working)
I run MemWatch 1.2 along with it. When I connect with Lynx, anywhere,
and/or download files, I can see the memory slowly being used up.
It appears to be holding all gotten files in memory, and never
gets rid of any! As a result, when I have filled up, the 1.5-2
MB of free mem, it dies with an "out of memory" message. Am I doing
something wrong? How can I set it up so it doesn't die?

Any help will be appreciated.

Hi Jeff.

I've got TOS 2.06 & TOS 1.62 installed. When I forget to switch, and leave 1.62 active, I get the same symptoms. I can only assume that it is something to do with STiK trying to install a cookie as an accessory. This should be fixed by the current beta of STiK which has a TSR prgram for the auto folder to do the same job. This is the best I can offer, I'm afraid. Hmmm. Do you have a cookie jar on TOS 1.04? You might need to get an Auto program to install a cookie jar.

I'm no expert with this stuff, so someone will probably sort my answer into an understandable and correct form!

Steph.

From: ae490@ccn.cs.dal.ca
Message-ID: <4i2st4$l5d@apollo.isisnet.com>
Source record: 149122

Anyone know where I can get a fix for TOS 1.06. You see, the problem I'm having is that whenever I save my color monitor to medium res, it always boots up in Low, no matter what. I heard there might be a fix for this somewhere but after checking Hensa and the Michigan site, I don't think it's available. PLEEZ help if you can, because generally speaking I like 1.06 and really don't want to have to upgrade any further unless I really have to (I can't afford it right now either). HELP me Please !!!

4601. Re: VME Video Cards

Newsgroup: comp.sys.atari.st
Date: 1996-03-12 00:00:00 UTC
From: lpursell@bright.net
Message-ID: <826705936_OASIS_@bright.net>
Source record: 149124

I have a TT with a Nova graphics card. It's 1 meg and very configurable as it handles 1-bit, 4-bit, 8-bit, 15-bit, 16-bit, and 24-bit video modes as long as they fit in the one meg on the card. My NEC 3D easily does 24-bit in 640x480 with this card. The card includes a driver and a video mode generator to create your own modes to better match your monitor. I've never gotten English documentation however and that's my only gripe thus far. The Nova is also a box the hangs out that back of your TT as well. I also do 1027x768x256 non-interlaced if that's any indication of what you can do with the card.

I bought a Cyrel card and returned it cause I had nothing but problems with it. For some reason the Cyrel card would crash with the CPU cache on. Don't know what the deal with that was so I returned. It also failed to run all my own vdi clean program which run fine on standard Atari modes and my Nova. I had planned to sell my Nova card, but no I'm keeping it.

Hope this helps somewhat.

^^^^ ^^^^^^
Sorry to contradict you here but Gedcom has been supported for both
import and export in family tree since version 2.20
Ian Baker has been kind enough to answer a letter of mine and says
the current version is 2.25 and is\will soon be available from hensa.
I have certainly found all versions since 2 very stable and reliable
on both my Falcon and my sisters STe. There is some possibility about
incompatibility with specifically French TOS versions which is being
looked into but otherwise IMHO rock solid :)

This is why I didn't answer this one as I would of put my size Elevens
right in it and said " Avalon III is a Shell Program for Points off a
BBS". :-)

You took the more tactical cautious direction <g>.

As I said, it's probably just my lineup of ACCs and Auto programs doing the mysterious mouse mayhem, but I can't really change them about as they all serve a purpose to the BBS which runs 23.5 hours of every day. Ah well, it isn't too bad as I don't see the desktop much these days. ;)

Another small posting in this discussion...

The past couple of days I've been working on a small user manual to complement my virus killer, Antidote. The result is now available via ftp from www.hials.no, in the directory /pub/atari/. The program is freeware, and I'd like to encourage everybody to get a copy of it. I believe most of you will find it a tad better than UCK, although not as updated at the time...

: : 1) ExtendosPRO 2.3 loads up, and Magic recognises it but returns Invalid Drive

: AFAIK ExtenDOS Pro is a GEMDOS replacement for TOS. AS Magic replaces
: GEMDOS itsself by an improved version, it does not make any sense to use
: ExtenDOS. However, I may be wrong- does it hace sth. to do with CD ROM

This might be exactly the problem. Suppose any program that steals
trap#1 from my operating system. It makes a DOS (old vector) or BIOS
call (e.g. Rwabs()). These calls are interruptible (->Background DMA),
so every such program has to be fully reentrant.
Normally these programs are not. Even MiNT does not allow task switches
during Rwabs() (because MiNT does not have any Rwabs itself and uses the
old ROM routines).

>
>This is a good idea, but there could be a small drawback in that people
>already put the country in the subject line if they only want to sell their
>goods within that country. Therefore if someone sees a message with "USA" in
>the subject line they may think the seller only wants US customers..... but
>that isn't the case because, under your idea, he only put it there for the
>benefit of the *buyers* who only like to purchase goods from their own
>country.. :|

That little problem can soon be overcome by just saying 'FS USA ONLY', 'FS
UK ONLY' in the subject line.

Only minutes ago I went into a FS posting (with no country code), and read
almost all the message before coming across the 'USA only' line :-(Far
better to put that statement in the subject line, and guarantee that
interested people will read your message. Once Oasis2 arrives, with its
promised downloading of headers, I shall ignore all FS postings unless they
are specific in their subject line, I pay for my downloads and have to be
strict.

I note that it is some inhabitants of one particular country who seem to
treat the area as local to them, and don't realise it is global. But I also
note that many people from this country are very specific in their subject
lines, and that's great.

My suggestion is to make life easier and cheaper for ALL, irrespective of
which country they live in. We all know it is difficult to trade privately
with the USA from the UK, whereas it is getting easier to trade with the
rest of Europe, this is one of the bad side-effects of the European Union's
(someone's sick joke!) influence.

>So the person selling the goods may loose potential buyers from other
>countries who have read the "USA" in the subject line and think the goods are
>US only. :(

'FS WORLD' - or something like that, then I'll happily download it :-)

Anyway, all I want to do is get a simple system which we can all use and
benefit from. I trade privately with the USA, Europe, Israel, NZ etc etc,

so no trade barriers with me!

4617. Help using Miniterm

Newsgroup: comp.sys.atari.st
Date: 1996-03-12 00:00:00 UTC
From: ldickey@west.cscwc.pima.edu
Message-ID: <1996Mar12.152728@west.cscwc.pima.edu>
Source record: 149140

Whew!

It's taken a while, but I finally got a copy of STARTER.TOS to run on a 520 ST. Good things do come to those who wait. But enough philosophy...

One of the pograms I was able to get from a KERMIT server at my school was one called MINITERM. I was able to unarchive it and am now using it to hook into my school's UNIX system for ftp, pine, and all things UNIX.

One thing that I am having a difficult time with is downloading and uploading. I tried using sb and sz (I assume ymodem and xmodem compatible) but I can't get my ST to talk to the system. Is there a trick to this or am I going about it incorrectly?

The procedure I use is to give the command to send the file (from the UNIX system) and after that I am instructed to begin my ymodem (or xmodem) receive. I then press the second button on the mouse and get the window with all the transfer protocols. I click on one of the options for transfer and what appears is a window called ITEM SELECTOR (with the name of the file to download under the Selection prompt). I click on the OK icon to initialize the download, but a second or two later, I get a TRANSFER COMPLETE message.

Naturally, I'm not receiving anything. hy am I not getting anything to myy computer's drive? I'm using disks with plenty of free space and I believe the correct path is being specified.

Any help would be appreciated. I'm just starting to have fun with my ST and I am eager to get as much out of it as I can.

Thank You-

Loren Dickey

You will have to download the pictures seperately. Tey are not part of
the HTML Document. I guess that there is a tag of th type

blafasel

in the document.
Just put th image in the same directory as the HTML File and it shoud
work.

You should try gas by GNU. It can be found on millions of ftp sites. The
original code is on

ftp://prep.ai.mit.edu

an atari version should be found somewhere in

ftp://ftp.tu-clausthal.de/pub/atari

I hope this one helps you.

>Guy@swampdog if he knows why.....

I don't know why but I can have a damn good guess. I think somewhere
at or below the STiK interface something is running in user mode. When
it's not pre-emptive (ie co-operatively multitasking) then everything
is hunky dory because the code keeps running without a break.

As soon as you switch pre-emptive multitasking on then MagiC can grab
control from that code section and hand it to another process. A quick
and dirty fix may be possible simply by finding that code section and
running it in supervisor mode - well that's the approach I would
initially take to locate the bug. I would suspect a software
polling/timing loop and then critical interrupt code because it will
go away eventually, no doubt because MagiC just happens to hand
control back at the right moment.

I would investigate further but I don't have the time :-(

STEINBERG SYNTHWORKS FOR ATARI ST

I want to remind you of a time (not so long ago) when (almost) every
synth had its own dedicated editor, full of graphical tricks,
shortcuts, and even beautiful , and easy and pleasant to use.
Those softwares were called Synthworks and run on Atari ST(e).

Those masterpieces are no longer distributed and that's a shame.
So let's pour a tear and let's trade (dongle-less versions)..

I'm searching for Synthworks for YAMAHA TG77 and for KORG wavestation
A/D.
I will post the ones for D50 and for DX7/TX802 and family, if anyone
is interested.

I bettered the man-software interface of an Atari universal synth
editor called Genedit (that stupid thing lacked disk saving routines
!!) and will post it too if it can help anybody.

Are you running the "selection" daemon, to support cut-and-paste on the
console? If so, you must kill this before launching X, as it is using
the mouse device.

Tempus 2 ? I used it for about 4 weeks and then gave up in disgust. It
crashed far too often to be usable, and had some really annoying and
un-obvious keyboard shortcuts. Urgh!
This is on a 4Meg STe though, so perhaps it works better on other TOS versions.

Atari 1040 STe + accesories for sale

I have a lot of stuff for sale. Here they are:

--Hardware--
Atari 1040 STe
Atari 1040 ST
Atari High Resolution Monochrome monitor
4 x 1 Meg SIMMs for either 1040
Migraph Hand Scanner
"Gadgets by Small" Mac Emulator with original Mac ROMs
SyQuest 44Mb Drive with cartridges
additional SCSI adapter to connect SyQuest to Macs
VideoKey (to use your TV as a monitor)
Joystick and mice

--Software--
PageStream
Touch Up
Font Editor
Clip Art
Tons of stuff (too many to mention)

Serious inquiries only, send email to:
damien@zoomtel.com
I haven't thought of individual prices yet, so make me an offer.

4636. Falcon for sale (UK)

Newsgroup: comp.sys.atari.st
Date: 1996-03-13 00:00:00 UTC
From: Darryl Godsmark <darryl@dcs.shef.ac.uk>
Message-ID: <4i6hlo$jaq@bignews.shef.ac.uk>
Source record: 149054

Whoops! sorry about the last post, but I forgot to put
a subject line in - that's what you get for trying to
do too many things at once... It's really been one of
those days :-(

>Hi all!
>
Well, like my subject line says, I have an Atari Falcon.
But I don't need it anymore. So, its for sale!

The entire package includes:

Hardware:

* An atari Falcon 030!
* Internal 128MB hard disk
* Originally 4MB, upgraded to 14MB memory
* 68882 maths co processor fitted
* Brand new internal high density floppy

* Replacement, high DPI mouse
* Powered speakers (Quickshot)

* A 15' svga multisync monitor
* Screenblaster II (hardware)
* 400 DPI mono hand scanner

Software includes:

* Devpac 3
* Official Atari DSP assembler and dubugger
* True paint
* Calligrapher gold
* Papyrus gold
* NVDI 3 with > 500 fonts
* Speedo GDOS
* GFA Basic
* FTL Modula-2
* Various scanning packages
* Falcon games: Ishar, Ishar II, transantartica etc.
* Lots of older ST software
* Various bits of (DSP) source code

Books:

* Official atari falcon developers docs
* Motorola 680x0 programmers handbook

* Motorola DSP programmers handbook
* Stacks of magazines (ST Format, ST Review, Atari World etc.)
* Atari Internals (good ref for older GEMDOS/BIOS/XBIOS)
* Various bits of online documentation, including graphics file formats, sound file formats, register listings etc.

Has all necessary leads, spare power supply, manuals etc.

Basically, I am prepared to consider any (sensible!) offer so if you are interested, drop me a mail at:

d.godsmark@dcs.shef.ac.uk

or phone me on:

(0114) 288 4223 (UK Mainland number - Sheffield)

I think a reasonable price for the system is at least 1200 pounds, but I need a quick sale so I am prepared to haggle!

Buyer must be prepared to pick up goods, although I will consider delivery if you live *very* close by, and I will happily demonstrate everything before purchase.

Cheers

The only way at this point is to use a) NVDIMac, which allows you to print
with GDOS on any Mac printer selected in the chooser and b) to buy a
GDO rpinter driver for MagicMac. This driver doesn't come from DMC but from
the original programmers who developed Calamus in the first place. They opened
their own buisness and are specialized in moduls for Calamus, I can't remember
the name of the company at this point. May be somebody could help with that.

Thomas

hello atari users
since atari is more dead than alive in belgium
i'm trying the net as last resort
in fact a have two problems
1:
i'm reparing(try to repair) an ste with 4 meg off ram
and doing strange things.at power up it does not see any drive at all
the internal drive does not rotate(so far no problem;fdc or dma unit caput)
but!after 5 min the drive begins to rotate and makes funny noises and after
2 min more it stops.giving a reset at this time results in a normal working
computer and everthing seems to work ok untill i shut down and power up after
30 sec resulting in the same problem.the computer was originally brought in for
problems with harddrive(adscsi controller + scsi hd)

2:
i'm also looking for parts for stacy lap
the keyboard does no longer work because the contactmembrane has
broken contacts in the connector.who can help me in finding a replacement
membrane or 2-hand keyboard
if there is anyone who can help giving hints or additional emailadresses
i thank him/her off the bottom of my hart

ps: excuse me fo my bad englich i'm a technician (or trying to be)not a writer

First of all, you're not going to post _any_ programs here 'cause
this is a discussion-group and most of us don't take kindly to guys
posting large binaries. Second, it seems as if you're going to post
cracked commercial ("dongle-less versions"???) software here.
If that's really your intension (why else are you posting this with
a fake address ?) be prepared to get flamed to hell by most of us.
But I do hope I just misunderstood you...

4657. The STe

Newsgroup: comp.sys.atari.st
Date: 1996-03-13 00:00:00 UTC
From: richardw@dma.org
Message-ID: <4i5dla$bhn@sally.dma.org>
Source record: 149075

I have a weird question about the STe. I recently got some chips put in to make the serial port working, and it is great now. I noticed when the cover was off that there were two ports on the left side near the cartridge port. What are they for??? My dad said possibly a joystick and someone else said a VGA monitor? If it is a joystick port, what kind of one uses those? If a VGA monitor, why two? If neither, then what?

4658. Fully Compliant MOD Editor?

Newsgroup: comp.sys.atari.st
Date: 1996-03-13 00:00:00 UTC
From: diehl@io.org
Message-ID: <4i5o6g$7k5@news1.io.org>
Source record: 149076

Right. I need a new MOD editor. One that supports all the standard MOD effect commands. I currently use ProTracker ST, and it's quite good, but it doesn't support any of the "E" commands except the Fine Volume Slide and Fine Portamento commands. The only tracker I know if that supports very nearly every command is Digicomposer by Istari -- but that thing crashes at the drop of a hat if I try and do _any_ file operations, and the authors, in their infinite wisdom, failed to map a "\" character into their program, so you can't enter proper paths. And forget Noisetracker; it doesn't even support some of tthe _main_ commands.
What I'm looking for needs to work on a Mega ST with a colour monitor. That automatically rules out StormTracker (which doesn't support any of the E commands at all anyway) and Oktalyser. It should also be relatively stable and, preferably, support the Replay 8 sampler cart for playback (which ProTracker does, but it cuts the volume way down) If possible, it should be interrupt independant (not use the VBI during playback) Anyone know of such a beast?

>to become one, because on my University (TU_BERLIN) I can't connect.
>Maybe it is the startup.nos file or the dial.txt file that does not
>work. The Modem dials, but it does not recognise the servers prompt
>(ts2>), wich I wrote in the dial file. It didn't even send the slip or
>ppp command and so after a few second it timed out. In our University
>we don't need a password for the domain connect.

>Please send me a help or a dial file that can work, otherwise my
>MEGAST (and I really love it) will fly through the window, and Iwill
>get a MAC (or 4a DOS PC).

```
configure:
init "ATZ\r"
dial_cmd "ATDT"
ld_code ""
number "31420951\r"
retries 999
#
execute:
init
cwait 10000 "OK"
dial
cwait 25000 "CONNECT" "BUSY" "NO CARRIER"
cwait 30000 "ts2>" "NO CARRIER"
wait 1000
#send "ppp mru=1500 idle=300\r"
send "slip\r"
wait 60000 "HELLO"
```

If that doesn't work then try "ts2" without the ">".

The best way to find out to to remove the "dial sl0 dial.txt" line
from the end of STARTUP.NOS - start Nos then type the line in
manually. You will now see the text as it happens so you can spot
where it goes wrong.

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST.
I am also open to trade offers. E-mail me your list.

HARDWARE

Atari STacy4 $700.00
4 MEG RAM
52 MEG SCSI internal hard drive
720 3 1/2" floppy
External Power Supply
Corduroy/nylon carrying case with handle and shoulder strap
Has standard ST ports. MIDI, Parallel, Serial, Mouse, Joystick, DMA, Monitor
Has built in track ball, but if you wish you can use a mouse
Has built in backlit LCD 640x400 mono screen.
You can hook up either an external color or mono monitor.

Atari SM124 Mono Monitor $50.00

Atari SF354 SS External Floppy Drive. Comes with power supply and
cable to connect to ST. Unit is in perfect working condidtion
but a little loud. $35.00

MISC

GE Soft Mighty Mic TT/32 4-32 Meg TT RAM Board.
0 RAM Installed Best Offer
TT RAM board that can hold 4-32 Meg of RAM. Board works but
when the machine gets hot the system bombs. With board removed
or system cold, system does not bomb. May be a MMU chip?

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $3.00

Carrier Command by Rainbird. Complete with box, docs, and disks $10.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Dragonflight by Thalion. Complete with box, docs, and disks $10.00

```
------------------------------------------------------------
Gold Rush by Sierra. Complete with box, docs, and disks $10.00
------------------------------------------------------------
Omega by Origin. Complete with box, docs, and disks $10.00
------------------------------------------------------------
Wayne Gretzky Hockey by Bechesda Software. Complete with
box, docs, and disks $10.00
------------------------------------------------------------

What about fast RAM installed by some other means, such as on an
accelerator? This may be at any address and the flag to show the
presence of TT ram will not be set at bootup. Presumably MagiC can
use it for applications, but it sounds from your description as
though it won't load into it, is that true?

I was getting this same problem myself, but all I did was run
a disk cleaner in the drive a couple of times, and it seemed to have
fixed itself. Not much help, I'm afraid, but can't hurt to try!

>effectively running on two *different* speed machines. Perhaps a vague
>comparison could be made if you multiplied the diffence in the STram
>and TTram access timings onto the MagiC benchmarks?

I did do the compairson with TOS in ST Ram on the Falcon, in 8bit
mode. MagicC is about 20% faster if all benchmarks are totaled up.
But, as more and more are adding FX's and other speeders, and have
the option to run TOS in fast ram, I thought that was a better
compairson. I really wasn't being bias :)

>
>To be honest I'm not convinced you have MagiC installed correctly -
>why can it not run in Fastram?

On the Mighty Sonic anyway, there is a VDI patch that loads the
fast ram into the system. It can be run from the auto folder or
from the desktop. As MagicC boots before the ram is in the system
I am unable to have it located there. Placement dosen't matter as
the system is ran through the auto folder process again after Magic
is installed. There is a special version of MagX! boot for users of
Outside VMM which prevents Outsides kernal from being overwritten.
I would need a "special" program like that to be able to load MagicC
into the Fast ram on my Falcon. I haven't tried that booter, mabey
it would work for me.

Thanks for the help,

Mike

In the users guide to version 2.4 (html format, comes with the package)
the following passage can be found:
"
-cache=NUMBER
set the NUMBER of documents cached in memory.
The default is 10.
"
Maybe in your version something else is compiled in. I'd try this option
with a small value.

4665. Monitor question

Newsgroup: comp.sys.atari.st
Date: 1996-03-13 00:00:00 UTC
From: tderrick@acpu.com
Message-ID: <9603130000102924O@acpu.com>
Source record: 149083

aaron_b@gummo.oldham.gpsemi.com (Aaron Bousfield) asked politely:

AB> Can someone do me a favor an tell me the pinouts of the Atari
AB> monitor port (13 pin din) as i bought it with no manuals. I
AB> am trying to wire it up to a RGB BB C monitor which i have the
AB> pinouts for.

Here's the data from the ST manual. Pin 4 is left ungrounded for color, so there will be no connection to it on the SC1224. Likewise for pins 2 and 11, maybe others.

```
_________
/ - \
/ \
| 4 3 2 1 |
| 8 7 6 5 |
| 12 11 10 9 |
\ 13 /
\_________/
```

1 - Audio out
2 - Composite video (where applicable)
3 - General purpose output
4 - Monochrome detect
5 - Audio in
6 - Green
7 - Red
8 - Plus 12-Volt Pullup
9 - Horizontal Sync
10 - Blue
11 - Monochrome
12 - Vertical Sync
13 - Ground

All pinout diagrams are from the external port view.

This was copied as best I could. Let me know how it comes out - I have not done too many of these 'ascii pictures' before.

Somebody else asked about connecting a vga monitor to the ST for mono hi-res. This data is from Kris Brunt, via ST Format #41, page 64. There is a picture that says, in essence (I don't want to try to draw this):
Connect pin4 (mono detect) to ground (pin 13) and connect to pins 4 through 11 on the vga monitor. Pin 12 (vsync) to pin 14 on monitor. Pin 9 (hsync) to pin 13 on monitor. Pin 11 (mono out) through 4700

ohm resistor to pins 1,2,3 on monitor.

The data (below) is from Claes Holmerup (Hi! - I saved your message.)

(snip)

Monitor inputs:
Hsync TTL level, negative, 3.3 kohm
Vsync TTL level, negative, 3.3 kohm
Monochrome Digital 1.0V P-P, 75 ohm
R,G,B Analog 0-1.0V P-P, 75 ohm
Audio 1V P-P, 1 kohm

Everything according to the "Field service manual".

4666. Kandinsky v2.03

Newsgroup: comp.sys.atari.st
Date: 1996-03-13 00:00:00 UTC
From: David White <david.white@rd.eng.bbc.co.uk>
Message-ID: <31469ECE.65A6@rd.eng.bbc.co.uk>
Source record: 149084

I've just installed Kandinsky v2.03E on my falcon. My first impression was "nice interface", then "darn, my v1 key doesn't work!". Here is a summary:

1) I *like* the node editting. But, it wasn't immediatly obvious how to do it.
2) I like the inclusion of allowing distortion of a selected group of objects, but do not think that it is very well implemented.
3) I *don't* like the way the tool bar and dialogues do not allow background clicking (with the correct options set). This may be ICFSs fault. ICFS is just about useless anyway, so I'm going to see if removing it makes any difference.
4) I couldn't find any notes on upgrading my registration, rather than just simply re-registering at the full cost. (what _is_ Joe Conner's email address, anyway? I forgot to bring in the docs).
5) I *like* the Outline mode
6) I think that the dialogues should be re-designed to make them more efficient with screen space and be allowed to float over the workspace. This means that the document windows have to be untoppable. But, this is a small quibble.

My advise is: get it! It's on Hensa Micros and it is _very_ good.

>
>blafasel
>
>in the document.
>Just put th image in the same directory as the HTML File and it shoud
>work.

IMO this is not the way. If you reload a local document, the accompanying
.gif files are there already. But as their names are 000000xx.gif they
are obviously not found because the original names are different.
It's just the way CAB works.
But the solution is very simple: when you have downloaded a page you'd
like to see later, put the document in the hotlist. Next time you select
it from the hotlist the .gifs will be there too. Very simple, and IIRC
this part is covered in the docs anyway. So no need to ask here...

Glad to help anyway.

This should be available at nearly all major sites. I believe it's called
STE_FIX.PRG, or something along those lines. It also came on the boot
disk that came with your STe. Just stick it in your auto folder.

Message-ID: <4i5ljc$cve@muikku.jmp.fi>
Source record: 149087

Hi there!

I�m not quite shure what�s the newest version of Cubase, but newest I�ve seen (and the one I�ve got myself) is 3.01.

The unfortunate truth is, that Cubase does like to jam the computer pretty often, and there are only few auto-programs and ACCs that it bears -- everything that is in the memory at the same time with Cubase helps it to fall... Cubase Lite is a bit better what comes to the crashes, but then again it�s VERY much simplier than 3.01.

In spite of these problems, I�m shure that Cubase is still the best sequencer available for the ST. It�s very easy to use, and the graphical editing of MIDI events such as note velocity, volume etc. is a very big plus. Also, the events that cause the crashes are easy to learn and avoid. And there is the auto-saver too..:)

With regards, Jyri

There is a newer version called 3.10 (or is it 3.12), but you'll probably
need to pay alittle to get it, (try a local music store which deals with
Computer stuff as well).

With or without the upgrade, you have got your hands onto the very best
sequencing software you can get. You simply dont find anything better,
even on another platform.

Hi all

OK, finally society has pressured me into buying a PC. I just need to upgrade my hardware, I guess (and have a machine a little quieter than the constant whirr of a Megafile!)
Here's the question. I have an SLM804 laser, and I'm wondering if I can run it on the PC. I'm envisaging the answer as being a definite 'no, as it's ST only', but I'm hoping someone can contradict me and offer some suggestions!

Many many thanks in advance!
Paul

Speed due to regular SLIP I presume. As soon as I find an extra monitor,
I can get back to trying to get STik and CAB to work on my TT.

4675. SC1224 Colour Monitor Outputs

Newsgroup: comp.sys.atari.st

Hi everyone!

This is probably a very dumb question, but I'm hoping someone can help out.

I had a 4mb Atari STE which I used for page layout, etc... Recently, I sold the whole system (sigh) because I need to use a PC for work. I kept my SC1224 colour monitor, though, because I seem to remember something from years ago about using it as a composite (NTSC video and sound) monitor.

Does anyone have the pinout information on this monitor, or conversion details? Is this monitor composite or RGB--or both? Thanks in advance,

Date: 1996-03-13 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <Do7vE7.A0I@ridgecrest.ca.us>
Source record: 149147

Just got HD driver from Toad. When I try to partition my
IDE drive, a message comes up "Insufficient Memory".

I went as low as 4-256mb parts, still an error.

The drive has been formatted with SCSI tool.

I was able to use SCSI Tool to partition the drive
in two parts.

HD driver then installed (after a lot of work).

Now the SCSI can read the IDE but can not copy to
it from SCSI (the Falcon locks up).

The SCSI can write to SCSI ok.

Falcon with Fujitsu IDE M1606TA 1.089mb drive.

The machine worked ok with AHDI 6.0 before with
no problems.

Mike

My Floppy does some weird things at times.
Sometimes when I try to copy a folder to the
floppy it will crash the machine. Using Kobold
there is no problem. Files copy ok, it just seems
to be the folders. So far it hasn't eaten any disk.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

hello,

it's maybe a silly question, but how can I format a ZIP-drive medium?
I've tried to do so with SCSI-Tool 5.02 without any luck. I've always
get a Time out warning.
Furthermore if I use the ZIP-drive I get 4 drive icons on my desktop
although the medium contains only 1 partition.
What can I do to get only one diskdrive icon?

Thanks on advance
Martin

>To bad you couldn't have made it to run on a stock 1 meg ST.

Making Foresight work with 1 meg systems was never a major priority in designing Foresight. It would have sacrificied either 1) a lot of the speed or 2) many features. I did not want to lose either.

However, considering that Foresight is donation-ware and a memory upgrade to 2 megs is probably of negligible cost these days, the total cost of running a Foresight BBS is still very low if you start with a 1 meg machine. Plus you come out of it all with a memory upgrade--making the whole of your computing more fun.

-Brian Hauer
Author of Foresight, the premier donation-ware BBS program from TSO Software.

Download the wide beta release! Available at The Sybarite Organization (310/543-5483, 14.4k v32bis) and many Atari ftp sites.

Make sure it's a recent version, as early ones only accept "MIT syntax"
assemler, which is different from the normal Motorola syntax.

This is because the disk is formatted as MS-DOS.
If its formatted on the Falcon you wont get this
problem.

4690. Cuban Music Recorded on Falcon 030! New CD of GUITAR MUSIC

Newsgroup: comp.sys.atari.st
Date: 1996-03-14 00:00:00 UTC
From: afn14016@freenet.ufl.edu
Message-ID: <4i9ki5$3ub@huron.eel.ufl.edu>
Source record: 148910

This is a new comercial recoding of new guitar music from Cuba.
The recording includes music for two guitars and flute and guitar.

Also peforming on the album is the best jazz Cuban guitarist
Jorge Chicoy. He has peformed with Joe Pass and michael Legrand.

The music is very relaxing and beautiful. This recording was done
on the Falcon 030 computer using Logic audio and Sony DAT.

Please get more information about the recording, artists etc.
from our WWW pages where you can also listen to samples from the
new album. You can also use lynx to read the pages.

You can also send e. mail for more info. Tapes are $9.95 (P&H)
included!

I can't give you a run down by model number and such, but the thing to watch out for is the same problem we are starting to have with the newer printer models! Make sure that the modem you are going to purchase has it's error checking and compression protocols in firmware and not on a disk that you have to run under Windows 95 or on a Mac! The manufacturers are also doing the same thing with the printers! It's cheaper to make a "dumb" printer and include a disk of software that contains all the smart options that used to be on the front panel of the printer! If you run windows 95 or use a Mac this is not that big of a problem but if you just popped $300.00+ for this printer and have an Atari machine, you better hope the dealer has a very liberal return policy! Same goes for modems! Best bet is check with a dealer like TOAD that knows what works with our machines and what doesn't! I just spent 3 days trying to get one of our members new fax/modem to work with Straight fax! In the end she is going to have to sell it at a lose and buy another one!

4698. ST Clock cartridge wanted (UK)

Newsgroup: comp.sys.atari.st
Date: 1996-03-14 00:00:00 UTC
From: iocentre@tcns.co.uk
Message-ID: <AD6E23C79668219799@du169-129.ins.co.uk>
Source record: 148918

Hi all. I'm quietly assembling a decent ST setup (STe, link, hard drive etc) and the one thing that I really consider essential that isn't yet acquired is a real time clock.

My previous ST had an AdSCSI interface, which was fine, but since (time moves on) the current standard is the clock-less ICD Link II, I'll need a cheap cartridge based clock or something similar.

Can anyone recommend a simple device that fits my requirements and preferably also give a UK supplier? I hate buying ST Format at 4.95 for around five pages of editorial, and I feel terribly cheap skimming the ads in WH Smiths... :)

Many thanks...
Tim.

4700. For Sale - TT's anf video cards (USA)

Newsgroup: comp.sys.atari.st
Date: 1996-03-14 00:00:00 UTC
From: smedley <smedley@gte.net>
Message-ID: <4ia0tb$80l@duey.gte.net>
Source record: 148920

```
--
FOR SALE - Two Atari TT030 computers

Both have:
4 megs ST RAM
TOS 3.06
720K floppy drives
modified parallel port driver hardware
(for longer transmission distance)

One machine is full US spec, and has a 60 meg hard drive.
The motherboard is revision H, for those who care.

The other is UK spec (UK ROMS & heyboard) with a US power supply.
It has a 120 meg hard drive. (I made sure this machine had the
larger hard drive to offset the minor inconveniance of the UK
keyboard.) The motherboard on this one is revision J.

Since both machines already have TOS 3.06, you only need an AJAX
chip to upgrade to 1.44 meg. (The drives are already 1.44!) I
never bothered to upgrade the floppy because I hardly ever use
floppies. BTW, Toad Computers has AJAX chips for $40.

PRICE - $450.00 each (including shipping in the "lower" 48 states)

I also have three AlberTT 1.2 video cards. They support one video
mode, 1024x768 with 16 colors, but it sure beats the TT medium
resolution of 640x480 with 16 colors! (You will need a monitor
that can support this resolution at a 48 Khz horizontal scan rate
to use this card.)

Price - $110.00 each (including shipping)

For one of the TT's and a video card, the price is $525.00,
including shipping.

Any questions? Contact me via e-mail at sirsmedley@delphi.com
or smedley@gte.net (I only check the Delphi address once or twice
a week, so for a faster response, write me at GTE.)

From: nick@iipmail.demon.co.uk
Message-ID: <826928100_OASIS_@iipmail.demon.co.uk>
Source record: 148926

I have ever so nearly got CAB working... however, not quite...
STIK connects fine, pages seem to download, but after 2800 bytes or so
the system seems to lock up. If I switch off the modem then the page
(Yahoo) will appear on screen, and I have to redail and to acheive a
linked connection. It's nearly there but obviously still isn't working
correctly, hopefully someone can offer some constructive suggestions
as this is a very expensive method of browsing!

I have had exactly the same problem.
It only occured on disks formatted on a PC, with the system files
copied on to it to make a boot disk.

The way round it is to create the folder on the disk using the
Atari and then copy the contents of the folder over.

Rich.

I just got a US Robotics 14.4 fax/modem. It works fine (I'm using it now)
as a modem; I haven't checked for fax yet. I'm pretty sure the Supras work
for fax/modem, and quite likely so with the Practical Peripherals units.

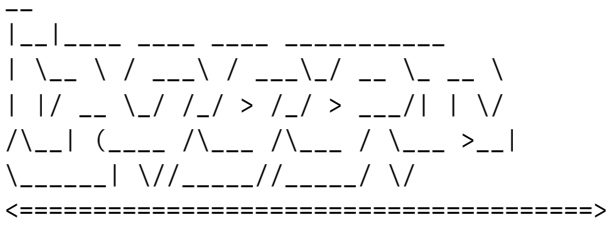
4713. Hsmodem6-problems

Newsgroup: comp.sys.atari.st
Date: 1996-03-14 00:00:00 UTC
From: jagger@connexus.apana.org.au
Message-ID: <4i8c1l$fg4@preeda.internex.net.au>
Source record: 148933

Any one having problems with hsmodem6. I'm using a Falcon and use drivn.prg and scc.prg in my auto folder, configured as suggested in Atari World magazine. Downloading seems to work ok but when I upload I get lots of repositioning to byte messages and often eventually it aborts the tfr. Hsmodem is supposed to be the universal serial fix that replaces all other fixes and when it does work the data flys, I get rates of up to 3200 cps. Have I got it configured wrong or is there a bug?--
Any help appreciated.



4714. WWW116 errors

Newsgroup: comp.sys.atari.st
Date: 1996-03-14 00:00:00 UTC
From: jagger@connexus.apana.org.au
Message-ID: <4i8bgt$fg4@preeda.internex.net.au>
Source record: 148934

I've been using WWW116 for a while now on a Falcon ith 16 keg of ram.
At first it seemed to run quite well, only a few runtime errors, but
lately it seems to give me a runtime error on every second url I try,
even ones that I have successfully accessed before. If I try the url that
gave me the runtime error I get the error again at exactly the same
number of bytes received. I had a message from Tim Newsome who wrote
cab.ovl, he seemeed to think the problem was in Stik.
Any ideas?--

Well - thankfully it went away as soon as I started running CAB as a single
tasking application. Turning off pre-emptive multitasking works also but
it isnt as fast to do. ;)

Now CAB just gives me a 68000 Exception Error. I have a feeling this is just
MagiC's way of interpreting the Runtime error 164 or whatever I used to get
all the time under TOS or anything else.. Kinda nice getting a dialog box
instead though. :)

> suggestions!

Of course, it it possible. You just need an intelligent, home-made hardware interface and a special printer driver for the PC. The problem is that even if you find someone who is capable of building such a device and driver (and I am not aware of any such solution on the market), the cost of this solution will probably be higher than buying an old ST to act as a printer driver for the PC. A solution using an ST as the mediator was published recently in the German magazine 'ST-Computer' (forgot the issue number, sorry).

Source record: 148940

jmh@io.org (Mike Harrison) inquired discretely:

MH> What is the statue of the Codeheads these days? Are they
MH> still in business and/or supporting their products?

Tragically, they are out of business. It may be possible to contact John or Charles via Genie, and I'm pretty sure that Sir Smedley listed Tomas on his 'Atari email list'. Product support is sure to be pretty sketchy, but most (all?) of their STuff works pretty well as is. I have Warp9, CodeKeys, MultiDesk, and the CodeHead Utilities, and haven't even been tempted to call them - no need. The manuals are great, the software is stable, and all of comp.sys.atari.st is right here, awaiting the call to action :)

MH> Are shareware payments still accepted?

None of the CodeHead STuff is shareware. Charles and John have released some shareware under their own names (or Little Green Footballs). Of course, they are entitled to shareware payments if you use their STuff. 'Pay the man'.

MH> Can anyone suggest a shareware file selector which they like
MH> more that Little Green?

'Fraid not. The only thing better than Little Green is Universal Item Selector, at least among the American-made prgs. IMHO. UIS is commercial, about $19, and worth every penny. I have not tried Freedom, Boxkite, Selectric, or ???. Others can tell you about those.

Incredible ! I have *EXACTLY* the same problem !
I almost dropped my Falcon out of a 6-story-high window 'cause of this.
I think it first occurred after I had an accelerator installed, but
disabling it altogether does not make any difference at all.
What really pisses me off is that some days it functions 100% okay,
and the next day *nothing* I try solves it. Even a completely 'clean'
system without any resident software running does not help then.

I thought I was the only one with this. Guys, please *help* !

f> You won't find any argument from me. Latest word is that subs can be
f> arranged by phone, though, so Future haven't stopped all
f> subscriptions.

An even later word <g> is that Future are now sending out letters to people who's subs have just run out saying that they DEFINATELY CAN NOT renew their sub :(

According to a writer in FN.STFORMAT/N.ST.FORMAT the official quote is:

"Subscription for the magazine are to be discontinued
therefore a renewal will not be offered, although
ST Format will still be available in the newsagent."

f> to see what the general readership thinks about losing the disk. I

I havn't taken the cover disk or subs disk out of their packets for 6 months now... but that's 'cos I'm on line. Off line readers probably still enjoy it... and use it as their main source of new software. Therefore it would be wrong and unfair to stop the cover disk.... and will probably cause many people to ditch their ST's due to a lack of new software. :(

m> That little problem can soon be overcome by just saying 'FS USA ONLY',
m> 'FS UK ONLY' in the subject line.

Indeed.. but if people see the word "UK" as in "I Live In The UK", they may misread it as an "FS UK Only" message, when it isn't. In future I will put both to avoid complications :)

m> 'FS WORLD' - or something like that, then I'll happily download it :-
m>)

Yeah, but that doesn't say which country you live in. Do you see why I suggested putting both now...eg:

FS: Games (World) <UK>

Which says that anyone in the world can buy them... but i live in the UK :)

Out of the ether, the following was mentioned by
frank@support.tachyon.co.uk...:

f> I think it's safe to say that you're talking from your a**e. Sorry
f> if that's harsh (!), but I'm fed up to my back teeth with people such
f> as yourself predicting the imminent demise of STF. Certain people have
f> been doing this for 2 years now, and they're still wrong (Hello,
f> Neal).
Frank,
It would help if someone could give a straight answer to some of the
questions floating about! As it is at the moment, with no official line or
straight answers people are bound to speculate!

So lets have some precise responses from the boys at Pearsons, which
will halt most of the mis-information!!!!

Spencer

> and run lynx by clicking on it in /u/f/lynx/lynx. That is where I
> put lynx. I have put lynx.cfg in /f/usr/local/lib as specified.

Is /f/usr/local/lib linked to u: as u:/usr/local/lib? It must be,
or the location of the lynx.cfg file must be told to lynx. It will
look up only 'u:/usr/local/lib', because u:/ is the root of the drive
from which you start lynx itself. (Unix filesystems know no drive
letters as you most likely know, they have only one root: '/'.)

> If I run lynx with no arguments (in the TTP box). it can't find
> www.cc.ukans.edu, and dies. if I start lynx with
> http://www.cwru.edu
> it finds it ok, but with no bolds on the link names, and no
> cursor telling me where I am. I run lynx on my VAX, and so

Did you set the environment variable TERM to 'st52'? If this is
done, lynx should get the appropriate terminal information from
/usr/lib/terminfo (must have been in the lynx package, don't know
about it being in the TAF set or not). If all is set right, you
should have an inverse cursor bar as expected.

> I still can't run it in an x-term window, under TAF.
> I can get dip to connect right, but when I click on lynx,
> it dies with an "out of memory" error.

The problem seems to be that you are out of memory :-). The X
server alone is about one meg in size, add the various fonts
and the window manager and there is no more problem with having
loads of unused memory left ...
Besides, X-Windows is a LITTLE slow (at least on my brave 1040ST).

I would recommend to run from a shell (INIT=f:\..\someshel.ttp)
or - even better - run dip from your mint.cfg (exec f:\..\dip)
and then INIT=u:\f\lynx\lynx ! That's the way to acquire the
optimum of free memory for lynx, for it just LOVES memory too;
web pages and texts are cached in RAM.

|> And by posting that, you're effectively saying that most Atari owners are
|> stupid, as more buy STF than AW.

The human race is stupid - the majority more so than the rest. Many decent products in the
history of the world have been outsold by competition of lesser worthiness:

Betamax vs VHS, just about any Atari machine you care to name vs its contemporaries, and
look at all the morons who worship Microsoft products, are they particularly clever? Hmm.
The list goes on.

I'm still supporting STF in the hope that it will perhaps get back to the standard it once
had. By `standard' I don't mean page count - any fool can see that the market has shrunk,
but we all remember the flying aircraft incident in that Desktopper review, don't we? STF
got a good telling off from Karl Brandt of System Solutions, and I could see it coming.
That just wouldn't EVER have happened up to a few years ago.

On a better note, I do think that STF is improving. The DSP coding articles were a step in
the right direction. I just think it is sad that the quality went down in the first place.

From what I can remember they are analogue joystick ports.
I don't remember seeing any hardware that uses them and you can't
just plug in PC joysticks OR normal digital joysticks since the
connectors are compact 15pin D-connectors.

Source record: 148953

I am trying to install linux 68K on an ATARI TT. Hopefully I can finally get a web browser that works!

Someone posted a Guide to Linux/68K on the ATARI ... on GEnie dated january, 16, 1996 but I can't find an address or author. Thanks to GEnie's doubling their rates, I no longer subscribe, so I can't check there.

Does anyone know who did the linux guide for the ATARI and how to get in touch with him?

THANKS - Mike Marion

>
>Can anyone recommend a simple device that fits my requirements and
>preferably also give a UK supplier? I hate buying ST Format at 4.95 for
>around five pages of editorial, and I feel terribly cheap skimming the ads
>in WH Smiths... :)

I use a Forget-Me-Clock cartridge made by Marpet (the memory upgrade
people). It sits in the cartridge port and comes with a little Auto
program which reads it at boot-up. Even has a through port so you can
still plug in a scanner or dongle. Essentially, fit and forget. Mine
gains a little over time, but basically it just sits there and gets on
with it.

Try 01423 712600, which is from a year old STF, but it's the nearest
thing to hand with the number.

BTW, is there anything around which would let me plug in *both* a
scanner and a dongle at the same time (maybe with a switch, or even
software selection)?

>no longer want to work. Luckily, I made backups. Can anyone
>give me some possibilities as to why this is happening?

I dunno, but I am getting simular problems. My Falcon is eating
disks. It seems to be related to how long the Falcon is on (or
perhaps how many times the drive is used?) as it seems to be OK
in the mornings, but eg. 10pm when I have finished my work and
want to save it on disk it kills the disk. I'm also finding that
I cannot use the disks again on the Falcon after it fails (even
if it was on a READ operation!)....

My Falcon has just gone off to System Solutions for an FX-card
to be fitted, and hopefully the can find/solve this problem.
(I attached a note describing the error... I ought to ring them
up as well...)

I'm sure there must be. I recall in some old ST User(?) mags articles about clubs
and the like producing newsletters on Ataris, and I'm sure churches were in there
somewhere... Perhaps you may like to contact Harry Sideras (I think he's at
something like sidcelery@cix.compulink.co.uk - don't quote me!), who is a bit of
a user-group guru...

4751. MOD/Sample Sites Wanted

Newsgroup: comp.sys.atari.st
Date: 1996-03-14 00:00:00 UTC
From: diehl@io.org
Message-ID: <4i9f0v$nms@news1.io.org>
Source record: 149102
Cross-posted to: comp.sys.atari.st,comp.sys.amiga,comp.sys.amiga.audio,comp.sys.ibm.pc,comp.sys.ibm.pc.soundcard.music,alt.binaries.sounds.mods.d

Here's the deal. I'm almost finished writing my difinitive guide to writing music MODules (titled, in the spirit and tradition of newbie manuals everywhere, "MODs for Morons"), and I've added in a section detailing where to get all sorts of stuff on the Internet pertaining to MODs. It's not by any means an exhaustive list, but it's enough to get anyone going with anything they need from Internet locations close in or around any country. What I need is to compile a list of FTP sites and WWW pages featuring the following:

- Music MODs (XM/669/S3M okay, but my guide covers only 4 track PT MODs)
- Sound Samples (Any kind, but with special emphasis on musical instruments, including public domain MIDI patch sites such as the Kurzweil site at ftp.uwp.edu) Any format will do.
- MOD editing/playing prorams for Amiga, IBM PC, Apple Mac and PowerPC (I already know pretty much all 'trackers/players for Atari machines) and where to get them
- Sample editors for the machines listed above

List your favourite MOD editors/players and sample eitors and your reasons for them being your favourite. Feel free also to list your favourite MODs while you're at it. :-)

Please don't list any Aminet sites, as I already have all of those, the major ones being included in my manual.

Answers in E-Mail, please, as I actually don't frequent all of the newsgroups this is getting posted to. Credit will be given in the guide for your assistance. Once finished, the guide will be available on my homepage (URL in my .sig) and on many FTP sites.

4754. Why hsmodem

Newsgroup: comp.sys.atari.st
Date: 1996-03-15 00:00:00 UTC
From: Katherine L Ellis <kellis@mtholyoke.edu>
Message-ID: <Pine.ULT.3.91.960315024118.6015B-100000@mhc.mtholyoke.edu>
Source record: 148855

I was wondering why is it important to get hsmodem.
I have a falcon and a zoom v32 which apparently run until 14400bds.
So why hsmodem propose some speed like 57000bds when I can't
do it.
My falcon works fine without it and even my megaste with the small
patch in the auto to correct the little bug, works fine.
Why do I need hsmodem?

Bye.

You're not even safe with a name like US Robotics! One of our
members bought a Sportster recently and found out after he got it that it
was one of those that comes with the error checking and compression
software on disk instead of inside the modem! Luckily his dealer took it
back and exchanged it for a Supra!

The FLH was playing from fast ram on the Falcon. It was a
28mb 320*200 17fps recording made with Expose. The AVR was
recorded to hard disk with CD-Recorder available with Extendos
23a. The "sample" was a track from the FOO Fighters, 36mb in
size. Just thought you might like to know.

Believe me, I tried very hard to pull together when AW was launched, even to the extent of creating a private conference on CIX for *all* atari writers/journalists, regardless of magazine. While quite a few of the AW guys (Danny, Joe, Graeme) were happy to co-operate in a spirit of keeping the Atari market alive with two mags, certain others further up in the hierarchy weren't. Neil O'Nions said that it was his personal mission to shut STF down.

> I must have got a dodgy copy then cause i cant get rejoinder to do
>anything?, whats the latest version please ???????

Tony,

Current public release version of Rejoinder is 1.2 but you're right it will bomb on a falcon. The reason was simple, I didn't have a Falcon to work on then. But now I own one, unfortunately, the latest beta which does work very well on a falcon is not out to public yet, just beta tester. About that SOUP format, no, Rejoinder doesn't understand SOUP yet, sorry. But it is in the plans, so is BlueWave... we will see.

Geburah@kether.snafu.de (Rene Ceron Palomino) writes:

>Just some simple questions !
>Can MintNet or STICK or KGMD do the PPP internet Protokoll ?

STiK can't, MiNTnet can. KGMD is just an easy to install distribution of
MiNT and MiNTnet.

>Or, which WWW Browser runs with PPP ?

It's nothing to do with the browser, which just uses socket library calls
to interface with the underlying TCP/IP stack, either MiNTnet or STiK.

CAB can, depending what .ovl file you use, work with either MiNTnet or
STiK, for MiNTnet there is also a text only browser called lynx.

Your subject line mentioned linux. With that you can run almost any
X-windows browser, such as Mosaic, Chimera, Arena or TkWWW. Theoretically
netscape should only require recompiling to wotk, but it is unlikely that
Netscape will do so and they don't release the source code.

It was in nov/dec or dec/jan 95/96. The solution we presented works fine for me.
Unfortunately I only have an 1040 with 19200baud, so it's rather slow. But with an
STE/TT with 56000baud it should be really nice.

>Anyone have the same experience or know what to do about it ?

I believe that the docs contain some information about this somewhere :-)
The problem with dumptos is, that it doesn't work with TOS 1.X. You will have
to use WINX to get a proper TOS dump, or a debugger to copy the contents of
the ROM ($fc0000-$fefff) do a file.

> of one uses those? If a VGA monitor, why two? If neither, then what?

From left to right, an STE has :

* 2 round DIN plugs which are the MIDI in/out ports (MIDI does not
transport sound signals, but commands for digital musical
instruments)

* 1 cartridge port

* 2 special joystick ports that allow you to connect either:
- 4 extra standard atari compatible joysticks (with a special
adaptor
- 2 proportional joystick (like on PCs)
- 2 jaguar joypads

These joystick ports are recognized by very few games and only
appeared on the STE. You can very well live without them.

> Why do I need hsmodem?
>
>>>>
Just to straighten one thing out: The 57600 Baud is the DTE speed,
that is the speed from the Modem to your CPU, NOT the speed across the phone
line. If the modems (yours and the one you are connected to) are using
Compression, you need the DTE to be greater than the connect speed to handle
the uncompressed data your CPU is receiving. 2 to one compression with a
14.4K, you need at least a DTE speed of 28.8 to get full speed out of it and not
lose any bytes. (I really hate getting long winded and technical.)

> Tell me more!

There is no limit on IDE drives sizes and there never was on the Atari. The 540 MByte limit on some PCs is a result of a design flaw in the PC BIOS. The Atari can use the IDE registers in their full widths and this means no limit, at least none I know of. (I know Atari users that use IDE drives about 1.3 GByte on their Falcon.)

Hello, i have an atari 1040st fm with tos 1.09. Whgen i turn it on
it makes the sound like a key is pressed but no key is pressed. I reset
it a few times it stops doing it. When the normal desktop comes up the mouse
cant open any of the drop down menus. If i use the alt and arrows keys
the drop down menus open but if select anything using the keyboard the
computer freezes for about a minute, but i can select things using the mouse.
HOwever the mouse cant move the scroll bars on the windows, it cant reposition
the windows, its like the computer doesnt realize the window is even there
because it makes the dotted square like you are trying to select something.
Also the mouse cant select the ok botton or the cancel button on any of the
prompt windows. Anyone have any ideas whats wrong? OR do i have to take
it to get repaired? I am in west lafayette indiana wheres the closest place
for repairs? Thanks for your help in advance.

Sam.

I met this kind of problem some times ago with my 1040 stf.
In fact the problem was that my Joystick made a shortcut.
(If I remember, the Joystick, the mouse and the Keyboard are
managed by the keyboard processor (6803)).

If you don't have any Joystick, check your mouse and its connexion
to your computer (try booting without the mouse) and see.
If the problem persists, it means there's another problem. If not,
it's maybe your mouse which must be changed.

>as this is a very expensive method of browsing!

You can hit ESCAPE to abort the page, it will then try to display what
it has received so far. Usually hitting reload will get the whole page
but be patient anyway, especially with graphics turned on. It took me
ten minutes or more to get Toad's homepage up with graphics on the
other day. (Okay, probably a bad day).

If you are using demon's cache then consider not doing because it's
one more thing to go wrong.

The reason you want it is because, with compression turned on you
can do 57.6K bps on uncompressed stuuf, ie. all the text, the uuencoded
files, in other words anything but archived files and picture files! You
will notice the difference as soon as you log on with it!

> email: leslieh@freenet.edmonton.ab.ca

To be strictly accurate, you can access the CD-ROM under MagiC4 with
ExtenDOS Pro, you just can't access it from the MagxDesk desktop at
this time. In other words, programs running under MagiC4 should 'see'
the CD-ROM files OK. However, I recognise that this is not a long term
solution, so I am currently working on an update to ExtenDOS Pro to
support the extended calls, so that you _will_ be able to access your
CD-ROM under MagxDesk.

Unfortunately, I wasn't aware until about a week ago that MagxDesk only
uses _only_ the extended calls to access a file system; this is a change
from Mag!X (MagiC2), which does work fine with ExtenDOS Pro. I suspect
that this information may have been widely publicised in Germany, but it
never made it as far as this part of North America. Obviously it would
have been easier from my POV if MagxDesk had continued to use the
original GEMDOS file system calls, but now I know what's happening,
I can add the appropriate support to ExtenDOS Pro.

In case it's important to anyone else, it appears that MagxDesk uses
even more calls than are described in the Atari Compendium; it seems
to be compliant with the additional calls specified in MiNT 1.12, which
go up to around x'15F'. These include Dxreaddir(), Dreadlabel(), and
Dwritelabel().

Lastly, can you email me re the problem you're having with switching
CD's under 2.3? It's the first I've heard of it, and I can't fix it
unless I know about it!

Thanks,
Roger Burrows / Anodyne Software

4797. DBMAN HELP Wanted

Newsgroup: comp.sys.atari.st
Date: 1996-03-15 00:00:00 UTC
From: "Thomas R. Mccartney" <tmccartn@freenet.calgary.ab.ca>
Message-ID: <Pine.A32.3.91.960315095104.32748A-100000@srv1.freenet.calgary.ab.ca>
Source record: 149039

I am a long time user of the DBMAN database program - but I have run into a coupole of sticky spots with it on nmy falcon. If I configuire the DBMAN config file to sysflags=16 to make it think it is running on a TT then my system will use 16 colours but sort of at random. (for example it rewites my 0 register color form white 1000,1000,1000 to a grey 800,800,800) THe set color command chandges things but it doesn't seem to correlate with the colour palete I am using. Finally when I exit it sets the last 8 colour registers to black.

The problem goes away if I use 4 or 2 color mode, but then I can use the contrating colours to set up my screens. Is there a flag setting I am missing, or is there a better way to set up the color settings in my programs.

BTW - the set the last 8 register to black problem goes away if I semark out the sysflags settings.

System: stock falcon using NVDI 3. DBMAN ver 5.32

> appeared on the STE. You can very well live without them.

Well, actually they are on the Falcon as well...Games like Rock 'n Roll Clams, new version of Alien Thing, some PD games like Asteroidia use the analog ports but you're right-not a whole lot do and you can live without them...On the Falcon, however, some 3rd party products (screen enhancers) use one of these ports for a power supply...

Now that I've said you can live without them, let me also say that once you get used to a game with the Jag controller you won't want to go back to your average joystick! <grin>

: : TC FLH at the same time on a fast Falcon. Amazing.

: Well playing a sample like that doesn't take up any processor time
: so it's hardly a wonder it works well! It should work even with MultiTOS
: (though that TC FLH would slow down to a crawl). Yup, MagiC is fast
: but I was annoyed by the fact that my keyboard mapping isn't supported
: and the lack of minixfs support..

Well, the keyboard mapping is no big deal really. But I agree, it's sad
it's not supported... it's not everyone who have the knowledge to get
around it. Another thing I have to point out is the unacceptable boot
delay for SCSI only users... It takes over one minute for to boot up,
thanks to the IDE check. They better come up with a "fix" to this soon,
I think me and many of the other SCSI only owners that have paid a lot of
money for MagiC are a bit dissapointed about this.

They are analogue joystick ports. You need the Jaguar joypad to use them
and a program/game that will recognise their presence. I think Substation
is one such.

-Unknown- wrote this about "HD driver-insufficient memory message?" to All :
Hi Leslieh,

> You can use an IDE drive larger than 540 on the falcon? That's
> news to me. Tell me more!

No problem!
Currently I use two 850MB EIDE-drives (yes - it IS in a tower) and everything works great!
I've tested a couple of 1080MB and 1275MB drives as well and they work fine too, but when I've tried 1.6GB or larger EIDE-drives it has never worked - I don't know why... My 2.1GB SCSI-disk works without any problems, so I can't see why a 1.6GB EIDE-drive doesn't cooperate :(
To get it working with two IDE-drives you need to use HDDriver or SCSI-tools. I believe that ICD Pro also handles two IDE-drives, but I'm not shure because I haven't tested the ICD software.

Best regards,

Claes

4815. Calamus SL Fonts/ FaST club in England

Newsgroup: comp.sys.atari.st
Date: 1996-03-16 00:00:00 UTC
From: smiller@farad.elee.calpoly.edu
Message-ID: <4idob1$2fv@isnews.csc.calpoly.edu>
Source record: 148870

Hello, wo quickie questions #1 What was the final thoughts on that DTP ftp site someone wanted to set up?

#2 How do I go about ordering the Calamus font disks from FaST club ? I am obviously not in England and I could not figure out where they wanted the money to be sent for the disks...

thanks,

*steve

PS Let's get that DTP ftp site set up!!!!!!! I need more fonts for Calamus!

IN>little Auto program which reads it at boot-up. Even has a through
IN>port so you can still plug in a scanner or dongle. Essentially,
IN>fit and forget. Mine gains a little over time, but basically it
IN>just sits there and gets on with it.

I made a little program that asks for the time every boot. It's
ftp-able from hensa AFAIK (I can't ftp myself). Look for a file called
PUTTIME5.ZIP. It should be put in the AUTO-folder.

IN>BTW, is there anything around which would let me plug in *both* a
IN>scanner and a dongle at the same time (maybe with a switch, or even
IN> software selection)?

I have a Dutch mag discribing how to use eight cartriges with one
port. Don't know how it exactly works, though.

Greetings,

Frits.

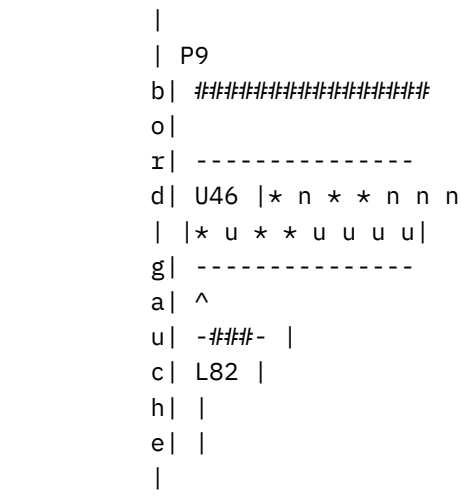
---------- Forwarded message ----------
Date: 12 Mar 1996 16:56:34 GMT
From: John DIOT <diot@ecoledoc.ibp.fr>
Newgroups: fr.comp.sys.atari
Subject: DEBRIDEMENT des ROM du FALCON

Comme certains l'on demande, voici une breve description
de l'operation de debridement des ROM du Falcon.
(elle est decrite dans les docs de montage de la CENTURBO 1)

Cette operation permet de passer de environ ~92% de ROM Access
avec GEMBENCH 4 a 98-100% de ROM Access sur un Falcon normal.
(ou 127% avec une HIGHSPEED 32 (ok Olivier ?))
Ceci accelere donc toutes les routines qui sont en ROM,
c'est a dire TOS, GEM, et bureau d'origine.

Voici une partie de la carte mere du Falcon (Rev D/C)
situee a gauche en bas :



Il suffit de rajouter une soudure entre ces deux bornes.
(de la meme maniere que les deux autres soudures presentes)

Envoyez-moi un mail si necessaire.

: ASSIGN.SYS, too - finding no fonts there, except the screen
: ones =(

I am working with XAct 3.1. At first I installed it without a vector-GDOS system, just NVDI 2. So it used its own vector font scaling system and the BT-Font-directory of That's Write.
After buying NVDI 3 and installing it, XAct wasn't able to find the fonts anymore.

After trying several things, the idea came to my mind installing the whole program anew and it worked. It seems to me that XAct's vector font scaler collides with the NVDI system and during installation the definite decision is made whether to use the programs own routines or those of NVDI or Speedo. Concerning Scigraph as an older version of XACt: I don't know if it is able to handle vector fonts at all. If not, this might be part of the problem as well. Perhaps it really needs bitmap fonts and/or cannot cope with the lot of fonts used in the vector GDOS-systems.

Bye,

Kerstin

Get Xact v3.1 which is the updated version of Scigraph,
it has its own fontscaler and uses speedo fonts as well as gem fonts.
It works under Magic / MacMagic.
Xact is an excellent program.
Unfortunately the program is not developed any more for the Atari platform.

Hi Michael

m> I upgraded NVDI to V4 on my Falcon and ST. With the proper
m> program in the autofolder, I am not able to view any fonts
m> (installed or otherwise) with this tool.
m> I have tried this under MagicC 4 and plain old TOS.
m> All I get is a blank menu with both machines.
m> Anyone else have this problem?

Yep, the program doesn't seem to work at all well, especially on ordinary TOS-equipped STs. As far as I can tell at the moment, fontname depends on the ability to drag'n'drop font files and/or folders onto the prog on the desktop. You might need to install an alternative desktop on the ST, Teradesk and Thing both work fine, although you can't drag folders.

I'm stuck at this point, fontname loads and shows fonts that I've dragged to the program, selecting them and clicking on install results results in the fif file being updated with the new fonts, but the resulting folder(s) is/are empty so NVDI does not pick up the new fonts.

I've emailed the English distributors a couple of times now, but have not had the courtesy of a reply.

Good luck.

Speak to 'ya later!

> Just wondering if knows of an Atari Christian
> Group or similar.

There used to be The Atari ST Christian User Group run by Joe Clemson in the UK. It started sometime around 1992, and produced quarterly magazines. The first six issues were on disk, and the next four were printed. The group was suspended in 1994 as Joe had pressing work commitments.

The last I heard was that Joe hoped to get the group fully functioning again sometime in the future, but this would have been over a year ago now.

I don't think he had an E-mail address, but if you want to contact him, then please mail me.

>like the above, and some of the smaller ones too, then the authors
>must agree to use it, otherwise there is really no point.
>
>Let me know what you think !

I have setup this sort of list specifically to do with stik
development I have a list of people who regularly get new versions of
all the programs being beta tested at that time if I find somebody
developing a new program I ask them if they want to use this or not it
works rather well actaully. The only problem with this is that you
have to keep the beta testers to a level the person organising the
list can manage I have tops 10 people on the list at one time because
this is a number I can deal with. I send the authors as much detail as
possible from the bug reports I receive, it means they dont get 10
emails which report the same bug which take time to reply to.
Overall I think its been a sucess and I will be continuing to use it
as long as new stik software is being developed :>

4831. MagiC 4 hates ICD?

Newsgroup: comp.sys.atari.st
Date: 1996-03-16 00:00:00 UTC
From: rm03@ic.ac.uk
Message-ID: <4ifd8m$7vl@oban.cc.ic.ac.uk>
Source record: 148886
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I recently upgraded to version 4 of MagiC for my 4Mb STe, but it's having bad problems with (I think) my harddisk driver. Booting Magic from the HD on an otherwise totally clean machine (i.e. no accessories, no other Auto folder progams) reaches the MAGXDESK desktop, but crashes immediately with a `Stack overflow - system halted' message. Exactly the same setup worked fine with Magic 2.01. The driver also doesn't display the HD parameters correctly during the second boot phase, which is why I think it may be the problem.

I'm using ICD v6.0.7 drivers with an AdSCSI+ host adaptor. Is anyone using Magic 4 succesfully with this combo? Or do I need a new HD driver?
Can I swap to another driver such as AHDI without reformating the HD?
(I'm using BGM partitions.) Or do later versions of the ICD drivers work OK?

Thanks for any help.

I know this sounds a little picky, but !!

You can now buy a new bare SCSI 3.5" drive, 2GigaBytes, for 270quid +
VAT !!!, I know this doesn't include casing, but that is relatively
cheap. On this score, your drive should be priced around 50quid !!!!
And thats comparing it to a brand new drive !

: external programs, and so is almost impossible to write your own....
: the other is just naff, and doesn't even work with HDD !!

"Mars" is a German one that seems fairly decent. It's available on
atari.archive.umich.edu. There's also a "game" that's sort of like
Corewars except you build robotic bugs using simple logic circuits,
called "Robugs" which is quite inventive.

: Any suggestions or recomendations are greatfully recieved.

The ones towards the front of the keyboard are the joystick ports...
Revenge of the mutant camels uses them.. I also remember reading that
there are a couple of games that allow the jaguar controller pad to be
used from there

The ones towards the back from the cartridge port are midi in and out ports..

This is a Virus file, created by some recent trojan horse type animated demo (I don't recall the name, sorry). ~.PRG seems to infect disk boot sectors, so be sure to check your local disk stack.

bye, Peter

>I hate to write this but AFAIK there ain't a "good" one available at all -
>sure there is FTREE 2.1 (the best one IMHO), Family Roots, GENEA and some
>others but none of them support GEDCOM (a standard genealogical database
>format) or have decent report generators.

There is at least one that supports GEDCOM (2.1 in this case) and
that is "It's All Relative" V1.06 with GEDCOM 2.1 import/export
capabilities -
compute relationships
unlimited extended notes
descendent charts
family timeline with historic data
family calendar of births, deaths and marriages
soundex calculator
BookMaker Module included
publish family book with direct import to Publisher ST from Timeworks.
(maybe a little dated.)

Available from Greg Kopchak
2233 Keeven Lane
Florissant, MO 63031

It's still missing a couple of capabilities I want but is the closest
I have found thus far. (I am interested in the family tree more from
medical research angle) Wayne

I would hope this 'update' is a free patch being as I bought ExtenDos
only recently and just now got a CD-Rom to find I can't use it under
MagXDesk. I just load NeoDesk4 as the shell but this wastes valuable
memory. Please keep us updated.

Aha, many thanks to you Mark.
That helps to decide what to do.
And whats about TAF, is it a MinTNet thing like.
Is it possible to get HTTP's in color with MintNet ?
Could i get KGMD from you ? or from anywhere else in the Internet ?
if yes where, which (anonymous)-ftp server ?

Sorry for some more questions, but i want to get out of the trouble with
STICK and PPP and RUNTIME ERROR etc..

Ciao

4847. Scigraph & NVDI 4

Newsgroup: comp.sys.atari.st
Date: 1996-03-16 00:00:00 UTC
From: thietavu@news.abo.fi
Message-ID: <4id88p$ek5@josie.abo.fi>
Source record: 148902

Is there any way to get Scigraph 2.1 to recognize the NVDI 3/4 vector fonts correctly, and actually use them..? I think (may be wrong ;-) the problem might have something to do with the way Scigraph handles font IDs..? Perhaps it tries to use ASSIGN.SYS, too - finding no fonts there, except the screen ones =(

It's funny; the font selector actually shows all the vector fonts installed, but the program isn't able to use any of them..

Thanks for any help!

Tommi

>from folks saying don't get ones with V-something numbers. Can someone
>please advise a long-time telecom user, but one not familiar with various
>model specs and why you can't hook them up to STs? Thanks for your answers.

It appears some of the newer modems no longer have all their code
internally so anybody without a Mac or PC is scuppered.

Ask them when you buy it if you have to have a Mac or PC - if they
don't know then get it writing that you can return it if it doesn't
work, so you're covered both ways.

I bought a Supra 288 Fax Modem in the UK. I plugged it in and turned
it on - I've still not read the manual :-)

IT> this without powering off the STF?

If you have an autoboot program such as Universal Item Selector (or
many others) that set up the cold boot keys, you can do it that way.
Newer versions of TOS have this built in. I'll even bet there's a
'cold boot' program out there, which you could click on & get a cold
boot...

From: phil4@phil4.demon.co.uk
Message-ID: <827180358_OASIS_@phil4.demon.co.uk>
Source record: 148964

I'm close to finishing a new ST golf game, and was wandering if there was an FTP site that has a collection of (preferably catalogued) sound samples which would be suitable for use on an ST, and are copyright free.

The game is to be shareware/pd and so cash to pay royalties are unavailabel.

Any suggestions ?

Thanks

Help!
I have an STf w/4MB, running Thing,with or without MiNT.
I use superboot to select on or the other. When I boot without
Mint, and use Everest (0.35e) all runs fine. But when I boot with
Mint, and go to the desktop, Everest runs, but not properly.
It seems to confuse line spacings, and the text comes up a
half-line BELOW the cursor. Therefore, when I run Everest, I get
a screen full of garbage composed of half lines, and gray bars
where spaces should be. Editing is impossible. Sometimes I get a cut a
cursor, sometimes not.
Can anyone tell me if this is normal, i.e. Everest just
doesn't run under Mint? If not, any ideas how to fix it?
I usually run thing and Everest at 9 pt., But it seems to
do it with 10 pt. also.

John's right EXTENDOS PRO is great. I got it, installed and working in
less then 30 minutes. (Thanks Roger!!)

Cost is $30 from Toad Comuters or other Atari Software purveror. Why not
get the best when it costs so little?

The MegaFile 20 is a MFM, not RLL. Yes you can use any MFM
or RlLL drive but for the RLL you will only get two-thirds the amount of the
Hard Drive.

>
> From what little I know of RLL, it should work fine. However, I'm

> I'll post the solution once I've found it.
>
The ST225 is a MFM driven NOT a RLL. The surface of the
platters is not certified for the higher density. Might work but more than
likely will cause problems. Newer MFM type Hard Drives have a better
chance of working IF you can not find a RLL type drive.

Assuming you're using gopher, you can access atari.archive.umich.edu. The
URL is:
gopher://gopher.archive.merit.edu:7055/11/atari

The freenet you're using may also have a menu saying something like
"Other gophers", with a subheading under that saying "FTP archives". If
so, the archive you want is the Merit archives at the University of
Michigan. You can also get there by gophering to the University of Michigan.

4865. Help! Problems with UPOINT and Creatix 2834!

Newsgroup: comp.sys.atari.st
Date: 1996-03-17 00:00:00 UTC
From: andy@urban.prima.ruhr.de
Message-ID: <GCRSFGAJUP@urban.prima.ruhr.de>
Source record: 148970

Hi everybody!

I need help with a very strange problem:
I am using the point-program UPOINT (medium) for several months now without any probs. Since a few days now I can't get the UPOINT-caller to intitialize my modem (Creatix SG2834). Everytime I try to poll the caller-window shows me:

Modem initialisieren
Carrier ...

So the init-string seems not to get through to the modem. I've got no problems at all with other telecomm.-programs like STiK, Connect etc.. I found out that it DOES work if I first start Connect and then from within Connect start UPOINT. Then the init-string is sent right and everything works fine appart from the fact, that UPOINT is not able to decompress the recieved news-articles (problems with paths within the Connect-Shell).

If anybody has got a clue what could be wrong and how to fix it, I'd be very, very happy!!!

I tried an english version of MARS but it was very tetchy (that was
the one I was describing), for instance inputting a line MOV 1 1 would
get an error saying no numbers over 5 didgits !!!!???? it all seemed
to mess up when loading in external files !

4868. Magic 4 and system clock

Newsgroup: comp.sys.atari.st
Date: 1996-03-17 00:00:00 UTC
From: phil@yeadontt.demon.co.uk
Message-ID: <827073946_OASIS_NEWS@yeadontt.demon.co.uk>
Source record: 148973
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st,comp.sys.atari.st.tech

Can any one help?

Whenever I run Magic 4 on my TT the system clock is moved back 2 years,
ie from 1996 to 1994. This only happens on first boot up. So naturally I put
the clock back to the correct date. However when I exit Magic using the
Shutdown option and selecting cold boot, the clock is then advanced 2 years,
so I end up with the clock set to 1998!!!

Has anyone else experienced this problem. More to the point has anyone
cured this problem.

This is the only problem I have experienced with Magic 4, I even have
GFA Basic working (set to single tasking but....).

Thanks in advance for any help.

: I'm close to finishing a new ST golf game, and was wandering if there
: was an FTP site that has a collection of (preferably catalogued) sound
: samples which would be suitable for use on an ST, and are copyright
: free.

If you're looking for musical instrument samples:

ftp.cdrom.com:/pub/demos/music/samples

They're mostly sampled from synth cards and other clean sources, but
they're very good. Some of the ones in the Proteus package need some
editing, and a lot are 22/44KHz 16-bit mono WAV format, so you'll need to
convert them to 8bit mono. (525 will do that very well)

For miscellaneous sound samples, try ftp.funet.fi ... tons of .AU
samples; crap quality, but if you're not too concerned with quality then
there's plenty there. 525 will also convert AU files.

: The game is to be shareware/pd and so cash to pay royalties are

One stick the disk in the drive and click on the drive icon to
open the drive window, then double click on the text file and choose SHOW
from the dialog the opens up! If on the first step you get the error
message, data on this disk may be damaged, then the disk has 2 holes in
it and is a High Density disk which you STe won't access without a drive
upgrade! Go back to the dos machine and figure out how to format a 720k
disk and copy the files you want onto it and try again!

Message-ID: <DoEn6t.BvH@ridgecrest.ca.us>
Source record: 148988

I would like to say that under TOS 4.04 I have no problems at all with V2.3a of ExtenDos. I really think that all of the upgrades that you have provided have been a real boost to all Atari users. I especially love the CD-Record ACC function, which does by the way work under MagX! desk quite nicely. Just like Roger said, the files are available to other applications, just not from the desktop.

Mike

You will have many read-write problems with you SCSI bus.
Almost all Falcon within the last few years have one of
at least 5 types. Down load a file called Doitf030.zip.
This is a fantastic source with color pictures showing
where to find the mod and how to install it. Make sure
you can solder to multi-layer PCB's boards first however.

Or...

Do you have a fixed-IP address, given to you from your provider? If not, you need to have a $GET_IP in your DIAL.SCR file somewhere. Try dialing your Provider with a standard telecom program (Flash, Interlink ,etc.) just to see the sequence of text that come from them. Each provider may have a different front-end with different messages.

Also, look in the STik ACC dialog for the IP address ("Other Stuff" Button). There should be something there other than 0.0.0.0 if you are correctly connected.

From: fpierce@charm.net
Message-ID: <4ihc91$e1e@canton.charm.net>
Source record: 148994

FWIW Genie just announced a new pricing system which includes a $7.95
month deal similar to what existed; they also promised to be nicer and
want everybody to come back.

I haven't seen any 68K linux guides that recent - I was lazy and used the
Whiteline CD - I do have a guide for the Falcon which seems pretty good.
Email address on it is tomlin@zippy.spods.dcs.kcl.ac.uk.

Just my opinion, but setting up Linux, Xwindows & Chimera could take as
long as waiting for the new cab.ovl which I hear is just around the
corner and should eliminate the runtime errors which seems to be the only
major flaw in the Stik/CAB package now. There's lot's of other neat stuff
with Linux, of course, which does make it worthwhile if you don't mind
dealing with the *nix world.

Hello All,
For those of you still using Flash: Have you found a way to get
a block of text from the buffer to the terminal screen without all that
extra garbage that comes in when you do "upload block"? The garbage
characters outnumber the text characters about 4-1. I am on a UNIX
system, generally using pine, and have found how to get rid of the
garbage, but not how to avoid it in the first place.
Thanks for any help.

4894. Re: Booting from floopy after HD

Newsgroup: comp.sys.atari.st
Date: 1996-03-18 00:00:00 UTC
From: rhett@bigwpi.WPI.EDU
Message-ID: <4ik0fa$29d@bigboote.WPI.EDU>
Source record: 148655

double click wrote a neat little utility called BOOTIT that will do just what it says, read the boot sector of a floppy from the desktop.
a very handy program for several reasons:
1) if you have a mega ste like i do, you can set the cache and speed and such before booting an autoload program, such as a game. i think starglider 2 is amazing on my mega at 16mhz, cache on!!!
2) the boot routine on the mega is weird and i have some programs that wont boot from floppy initially, but will run from BOOTIT just fine (as long as it agrees with the speed and caceh settings)
3) as you are trying to avoid, you dont need to cold start to boot from floppy

i got bootit from umich.
anyway, hope that helps

You can ftp the latest versions for the atari from ftp.mcc.ac.uk
Look in the /pub/cubase directory.
I believe that the software here should work if you already have a dongle from an older version.

AFAIK, the Megafile 20 has an MFM controller. RLL drives should work fine
in such a configuration. MFM drives do not work reliably, though, with an
RLL controller since they are not designed for RLL's higher data rates
and bit density. Some MFM drives work anyway, however, at least for a while,
but the ST225 MFM drive specifically is definitely not one of them.

Someone suggested try viewing one font at a time, ie, actually
select it from the file selector through the font viewer program
instead of selecting a folder. This did work for me and I was
able to view one font. It looks like you can add more to your list
then save them for later viewing, but I didn't go that far. Most of
my DTP's allow that without the trouble :)

Mac software is NOT compatible with MagiC Mac (except for System 7x :).
MagiC Mac runs "well written" GEM programs on the Mac. If the program
will run in any video mode, resolution independent, then there is a
good chance that it will run under MagiC Mac.

: >I loved playing Dungeon Master onmay Atari ST. Does this soft exists
: >on PC ? How can I do to get it ?
: >Thanks

: Dungeon Master was certainly a ground breaking title. I am pretty sure it was
: released by FTL for the PC, but I think it looked pretty much the same as on
: the ST. However, Interplay did release an enhanced sequel as Dungeon Master
: II. You can check out a demo on:

: http://www.interplay.com/website/sales/dmii.html

Dungeon Master II, while having enhanced graphics and sounds, is a tiny
and irritating game. It took me about two days to solve it. My
recommendation is to go back and play Dungeon Master and Chaos Strikes
Back again. Interplay should have just ported the original Dungeon
Master along with enhancements. They _never_ should have changed the
control system.

>... so in summing up, do the chips sit on the left or the right of the
>sockets!?? <g>

>Thanks for your help... I have saved the message for another look later. It
>went right over my head though... ;-(

The 32 pin roms will fill all the pins on the socket, but the
28 pin roms should leave the empty space to the right,

```
----------------. W102
1 | 1 | 1-2-3
| |
- -
| HI |
- -
| |
| |
----------------
^ ^
| |
28 Pin 32 Pin
```

As the 256, and 512 roms(28 pin) pin 1 == 32pin roms pin number 3

hope this is a little clearer.

regards dennis

4907. FS: Computer Items. UK Only.

Newsgroup: comp.sys.atari.st
Date: 1996-03-18 00:00:00 UTC
From: Spencer@mettav.demon.co.uk
Message-ID: <10467_Spencer@mettav.demon.co.uk>
Source record: 148668

The following items are for sale so make me an offer.

SM124 mono monitor.

External 720K Cumana floppy drive.

4Mb STe computer. Perfect working order. TOS 1.62.

VideoMaster digitiser and colour splitter for the Falcon.

MagiCMac 1.23, turn any Mac (68030 or better, or a PowerMac!) into an
Atari compatible mean machine.

Stereo Replay sampling cartridge for STFM or STe (boxed and as new).

Proflight flight simulator (for STFM, STe or TT, doesn't work on the Falcon
:-(

Vidi-ST video digitiser, this is only the digitising cartridge and no
colour splitter so £20 is the suggested price (inc. P+P)

View II, file viewing program. Designed for integration into the desktop.
Handles many file types (SEQ, pictures, samples, text, etc.)

Timeworks 2 plus two manuals on Desktop Publishing with it.

Epson FX80 emulation cartridge for DeskJet, Deskjet+ and Deskjet 500.

Printer Port buffer module, made by Paul Rossiter for HP Deskjet owners.

Warp 9 screen accelerator software for STFM, STe.

FontKit Plus 4, font editing package.

4908. Re: Christian User Group ??

Newsgroup: comp.sys.atari.st
Date: 1996-03-18 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <10458_hsideras@mettav.demon.co.uk>
Source record: 148669

Hi Shiuming, on 14 March you wrote:

l> Organization: Dept Computer Science, University of Manchester, U.K.
l>
l> David Mitchell <dmitchel@mcs.dundee.ac.uk> writes:
>> Just wondering if knows of an Atari Christian Group or similar. Anyone
>> interested in starting something??
l>
l> I'm sure there must be. I recall in some old ST User(?) mags articles
l> about clubs and the like producing newsletters on Ataris, and I'm sure
l> churches were in there somewhere...

Many people use Ataris to produce DTPd booklets that are often used for Church newsletters etc, yes. ISTR an article by a man of the cloth in ST Applications a few years back. Also, I'm aware of several proudly Christian Atari users, from magazine editors to programmers, but the computer industry is quite a non-sectarian scene so the fact never comes out. I've not been asked to list any group as specifically 'Christian' or denominational in any other way yet.

l> Perhaps you may like to contact Harry Sideras (I think he's at
l> something like sidcelery@cix.compulink.co.uk - don't quote me!), who is
l> a bit of a user-group guru...

Apparently <g> (The Email address is correct btw - this is my other one).

I'm getting a fair response from clubs in Scotland. Trouble is they're not in the Dundee area - concentrated between Glasgow and Edinburgh mainly.

For everyone's information, I'm still *not* happy enough to put the User Group information I have on *public* release because there's too much duff info in there. However, as time passes I add more groups as I'm informed about them (amazingly, three this month already), so anyone who wants a copy of the main UK list as it stands at the moment can EMail me at the addresses in my SIG for it (13k text file) and I'll also supply the Readme.1st file from the disk I supply (6k text file) detailing what other information I've compiled up to now.

The UK Association of Atari User Group (UKAAUG)'s disk almost fills a Double sided floppy disk and is available from me at the following snail address:

UKAAUG
49 Haywood Road
Tile Cross
Birmingham
B33 0LJ

PLEASE ensure that you provide a floppy disk (DD or HD is fine) as well as a suitable return envelope containing a first class stamp. I've given up the pretence of being nonprofit making - the UKAAUG is decidedly loss-making.

I don't mind having to pay for all the directory enquiry phone calls I make, nor the 90 minute calls to Tyneside or wherever, let alone the calls to the likes of Compo or whoever else I can blag replacement disks from for people that Atari pass onto me to do their after sales service for them -I'd almost rather that continued than to have isolated demoralised Atarians dotted about the country - (yes, I've just had my phone bill for the last quarter) - nor the extra EMail support and file transfers I involve myself in - that's all part of the service and I enjoy doing it.

All I ask is that the SAE/Disk is supplied to me and that any information you may have about User Groups in the UK - when they exist and also when they close down - is supplied as and when you hear about it.

Two directly relevant questions I have for this group are as follows:

1. If anyone in the UK would be willing to form an Atari user group were they aware of others in their area who'd be willing to join in, I hold a file on disk with the contact details of people who are similarly motivated. Your name and contact details can be added or I can put you in touch with the person I already have listed for your area. Disk file NEWUSERS.TXT

2. I've started a very terse list of Home Pages. The only qualification required to be on this list is that it is either of direct relevance *to* other Atarians or that it has been created *by* Atarians even though it may not have direct relevance to the Atari platform itself. Disk file HOMEPAGE.ASC - which looks like this atm (so that people don't contact me twice):

Is it possible to use an Atari 1040ste with 2megs of ram together with
the Atari SLM 605 laser as a print server in a pc network?? Would it
be possible to connect the Atari over a serial or parallel link??? If
any of this is possible, what sort of software would I need (brand)??

Thanks for any replies!!!!!

>the wrong way. If anyone could help, I would be very grateful:-) Thank you.

I installed TOS 2.06 in my STe...if you are not using a TOS switcher
then they will plug right in. There is an orientation "notch" on the
end of the chips/motherboard to tell you which way to go with them.
One of the chips is "hi" and one "lo"...if you get them backwards,
it won't hurt anything but your desktop won't come up when you turn
it on...just reverse them if this happens. One more thing, on some
STe's, a jumper (in the same area as the TOS chips) has to be in the
correct position (don't remember which way) It is already in the right
position in 906f all STe's...in the other 10% you will have to un-
solder one end of the jumper and move it over...its not hard at all.
Good luck! :)

Source record: 148675

```
>pop userdata <username> <password>
>pop mailbox <username>
>pop mailhost <ip address> 3
>pop quiet off
>pop timer 2500
>
>There ya go. Just replace <username> with your username, <password> with your
>password (the one you log in with unless otherwise specified by your isp!) and
>replace the <ip address> with the ip address of your mail host. That should
>get ya going. Then, once online, type "pop kick" and in comes the mail!

I found that when I placed the <ip address>, ( numbers, i.e. 206.182.12.10 ),
after the pop mailhost, I was unable to get my mail. After changing the
numbers to the mailhost name ( letters, i.e. seldon.terminus.com ), I've had
no problems. It's just an additional option that worked for me, and may for
you. I also found that the NOS logon was visibly active for me AFTER I changed
the <ip address>. ( I saw the modem activity and responses, and not just
NET> ) It appears if you have problems with your setup, the program indicates
these and allows you to fix them. You know when that has happened when you
see the activity of the logon process. ( This was my experience, others may
vary... )
If you check your nos.log, ( ?:\OASIS\SPOOL\NOS.LOG ), you'll see if the
connection was completed or rejected/failed. It is possible to make the
connection, but have NO MAIL. I haven't seen any indication when there's no
mail that the program has successfully checked for it...I sent myself mail
first to make sure there would be mail to receive. I hope this helps.

If this solution doesn't work flawlessly for you, I thought I'd pass on that
I've read the Meta.Sys and Memory.Sys files for NVDI and Speedo are DIFFERENT.
I have a script setup with XBOOT to load different .SYS files depending on which
I'm running. I change the .SYS files when I need to run Speedo by itself.

From: nurmix@gateway.ecn.com
Message-ID: <4ilod4$gti@gateway.ecn.com>
Source record: 148680

Just a little note to Atari users running STiK/CAB:

I just purchased a book called "New Rider's Official World Wide Web Yellow Pages" that came with a CD ROM. This CD ROM contains all the web sites that are listed in the book in HTML format. So, I put it in my CD ROM drive, fired up the Falcon, logged on to my Internet SLIP provider with STiK, and then, once within CAB, I just loaded the "Welcome" document from the CD ROM. I was then presented with a "web page" listing the various catagories on the CD ROM. After choosing a catagory, I was then shown the web addresses and info about more WWW sites than I could count. And finally, having chosen a good site, I simply clicked on it's name, and CAB took me there.

This is very handy, and works quite well. Now I've got a huge list of web sites just a mouse click away!

If you are running CAB/STiK on your Atari, AND have a CD ROM drive hooked up, I highly recommend you get this book/CD ROM! It cost me about $25 (US) at my local Fry's Electronics. And I'm sure you can find it in any good computer store. It's the 1996 edition, and it's by New Riders.

Now if only CAB worked a little better... <grumble grumble>

Sounds to me like you do not have the DNS (Domain Name Server) properly set in
the config, or, you are trying to resolve an irc host that does not exist. As
for the DNS, call your isp to find the ip address for it. Don't forget to
enclose the ip address in brackets! And setting 2 works best!

> I'll post the solution once I've found it.

I can tell you. The MF30 is an RLL controller, your ST225 is MFM. Seagate RLL
drives have an "R" after the numeric code, as the MF30's original ST238R does.
Most MFM drives will not work with RLL controllers, the other way round works
fine. (The drives are the same, but RLL has higher data throughput. Some MFM
drive electronics can't handle it, some will get damaged.)

bye, Peter

So it is! AFAIK the problem was disk space, at one point none of the mirrors were being updated because the disk just couldn't be written to. The Amiga and PC archives recovered, but obviously Atari was a lower priority.

There is another European mirror of Umich at ftp.switch.ch (can't remember the directory off-hand), which has always been up to date.

Dungeon Master was certainly a ground breaking title. I am pretty sure it was released by FTL for the PC, but I think it looked pretty much the same as on the ST. However, Interplay did release an enhanced sequel as Dungeon Master II. You can check out a demo on:

: (I'm using BGM partitions.) Or do later versions of the ICD drivers work OK?

Some versions do, others not. Some versions of MagiC do, others not.
Instead of trying all combinations use HDDRIVER. You should definitely use
this driver anyway as it supports DMA background transfer.

4937. Hard Drives on STe

Newsgroup: comp.sys.atari.st
Date: 1996-03-18 00:00:00 UTC
From: richardw@dma.org
Message-ID: <4ii9cl$37o@sally.dma.org>
Source record: 148698

Hello! I just recently got at a computer show here a 730mb SCSI hard drive along with a case to put it in. The case has the 50 pin centronics connectors. I am planning on making it as my drives E:, F: and possibly G: too. I have my Atari MegaFile 30 as my C: and D: currently. I have the LINK external device hooked up to the cable going from the MegaFile 30 to the SCSI hard drive with no problem. Then after that I have an external single speed cd rom drive (same type of interface - 50 pin centronics). I tried putting the ICDBOOT.PRG in the AUTO folder and then tried to format it. It only recognizes the MegaFile 30 as 0. I have the hard drive as 1 and the cd rom drive as 2. This was done for SCSI recognition, for 0-7 identifiers. Am I doing something wrong here or do I need more up to date software. By the way, my ICD disk I got has version 1.0 on it. I tried calling their BBS and the number has been disconnected. HELP...PLEASE! Send all responses via E-MAIL if possible, easier for me to get than trying to read all the USENET stuff.

However, you can connect Jaguar Powerpads, and use them in games
such as Zero-5, Rock'n'Roll Clams and various others. It is also
relatively simple to make the connector to allow you to plug in
2 standard 9-pin joysticks into each port. There are a number of
PD/shareware games that support these extra sticks, I believe.

The Falcon also has these connectors, and Moonspeeder from Compo
Software has an option to use an analogue joystick, so it must
be possible to connect one...

>
> These joystick ports are recognized by very few games and only
> appeared on the STE. You can very well live without them.

I assume the original poster meant the extended joystick ports, since they were confused with VGA monitor ports (same connector, different gender).

As was quite correctly stated, these ports will allow you to add 4 extra joysticks, which AFAIK only works with the game Dynabusters. Mind you, blowing up five of your friends (it also uses the "normal" ports) is worth it!

The Jag joypads are increasingly common in games (especially Falcon ganes - this also has the extra ports), though most allow them as an option. There are a few games that will only work with a Joypad, though.

In theory the ports could support 2 analogue (proportional) joysticks, or 4 analogue paddles (old rotary controllers), though little or nothing supports this. I believe that the version of breakout supplied with the falcon can use a paddle, but it's such a poor implementation of the game that I've never tried.

In theory again, one of the ports can also support a light pen (I'm working on that one...)

They could also support 4 digital paddles (well, actually dozens of the things, if you know what you're doing, but there's no need for it) - in particular Tempest 2000 on the Jag has support for a digital paddle (yes, I'm working on that one too)

In fact, the ports can also be used as an 8 bit digital output and an analogue input and/or 8 bit (I think) digital input - if you know what you're doing. Some of the screen expanders for the falcon use this fact to supply control information to the box at the back that does the hard work.

I think that covers everything <vbg>

Cheers,

Xav

4941. Any RPGs running on mono..?

Perhaps you don't need it Roger, but i can confirm your statement.
For those having troubles, try run a shell and access your CDROM drive
from there, then you'll see it works. Also you can exchange the desktop
with something else, (i tried Ease), and it's also work. Only problem
with Easy, it takes damn lot of memory, which is one thing we hardly can
live with during a multitasking system.

Anyway, back to the drawing board Roger 8)

This is a new comercial recoding of new guitar music from Cuba.
The recording includes music for two guitars and flute and guitar.

Also peforming on the album is the best jazz Cuban guitarist
Jorge Chicoy. He has peformed with Joe Pass and michael Legrand.

The music is very relaxing and beautiful. This recording was done
on the Falcon 030 computer using Logic audio and Sony DAT.

Please get more information about the recording, artists etc.
from our WWW pages where you can also listen to samples from the
new album! You can also use lynx to read the pages.

You can also send e. mail for more info. Tapes are $9.95 (P&H)
included!

HI ..

I would like to know what graphics card are available for the Atari STE 4Mbyte
(VME as well then !)

I just need more pixel (1024x768 as a minimum) but do not need the colors
, monochromatic is OK. Will a generic Multiscan EIZO monitor support
a new card .. (Yes I know I should check the range of frequency at home!)

Prices and company please ??

Any bad experience in running external graphics card and MIDI at the same time
??

Thnx for your time, and tips and suggestions .. !

Most of my updates are free patches (e.g. 2.0 -> 2.1 -> 2.3). They typically include both bug fixes and additional functions. However, when I added major functionality (audio support) and a new manual in going from 1.2 to 2.0, there was a charge for this; I hope no-one thinks this is unreasonable.

Adding MagxDesk compatibility is a fair bit of work, and I was planning to make it part of the next major upgrade, for which there would be a charge. However, it's clear that people want it NOW :-), so I've rearranged my schedule to meet this. I also will not be charging for the upgrade, although perhaps I should be billing the MagxDesk folks :-).

I have a Mega STE (TOS 2.05), with a Seagate ST157N SCSI disk (48MB). I would like to replace the disk with one around 100MB, and was wondering what would be a good disk to put in it. Will a Quantum LPS 105S work?

I was also wondering what the differences are between TOS 2.05 and TOS 2.06. Is it worth the money to upgrade from TOS 2.05 to 2.06?

I also have a ST with a MegaFile 30 that I would like to upgrade with a larger disk. Will a Seagate a Seagate ST279R work with the MegaFile 30 controller?

Any help would be greatly appreciated.

Thanks,
Chris

>flaming the software authors is about the best way I know
>to encourage them to switch to the PC
My post asked specific questions about the new version and never
flamed the Authors in any ways . One of my questions will Oasis
work now with Magx far from being a tough question !
My other was , is Spider in this version as this is the only thing
preventing Oasis from being a completed program . As for your point of
authors going to the PC side that's always their options . I don't
have a problem with the registration side as I think as stated before
the price is alright . But on my system a Falcon you have to try out
all new versions of software first . You know to show you what i'm
talking about a friend has a TT with a Nova card and Oasis won't work
on his system . But he won't disconnect his card just to be able to
use Oasis . Maybe what is needed is a FAQ with some tricks we can use
to rectify these kinds of situation . I recently had to change
providers because my newsgroups were being read as a wilcard . So in
this group the other day I found the answer was as simple as putting a
* in your NNTP.DAT file after the group name . I asked Phil about this
at the time but he had never heard about this problem so here is a
case for the creation of a FAQ that would of save me the time of
switching services .

The most reasonable way to do this is to use a small ST as the printer controller. The German magazine ST-Computer published a solution based on this idea a few months ago. It is mainly a software-based solution.

Hi,

I have tried UIS, Boxkit, STselect, LGS selector, Selectric, Freedom and just about every one available.

It is down to personal preference, I use Selectric all the time. Worth the tenner to register...

I don't know what the current version of UIS is... I may have an old one...

Hop this helps,

Newsgroup: comp.sys.atari.st
Date: 1996-03-19 00:00:00 UTC
From: Derek Meyer <derekm@moscow.com>
Message-ID: <314E7B3C.2238@moscow.com>
Source record: 148761

The following is for sale, as a system. I prefer to sell everything together and not piece it out.

Atari 1040STFM
SC1224 Color Monitor
Supra 105 meg Hard Drive
Atari 1200 baud external modem
Mouse Master switchbox
Golden Image mouse
Panasonic KX-P1124 printer w/extra ribbons and paper
Tons of software, including:
Neodesk 3.0 w/CLI
GFA Basic 3.0
Mark Williams C
DEGAS Elite
Replay 4 audio digitizer
Interlink ST
Michtron BBS software
Dungeonmaster/Chaos Strikes Back
Utopia
Lemmings/More Lemmings
Ultima V
Beyond Zork
And many more titles, both productivity and entertainment

I am asking $450 for everything. I will pay UPS shipping in the continental U.S.

All software has original disks, manuals and box, except Mark Williams C, which has manual only (the way I bought it).

If interested, or for a more complete list of software, contact me at:

derekm@moscow.com

Just ignore the problem, falcon owners should always use
kobold if you have it available.

Normal GEM DOS operations are far to slow in the first place.

Is your copy of ProTracker registered? If not that would be one more reason why the developers didn't bother to continue work and implement the rest of the commands.

I have contact with the programmer of ProTracker (Karl Anders Oygard, that's with a slash through the "O") and I don't know how hard it would be to add support for these extra commands, but maybe we can convince him to dig out his assembler once more?

ProTracker users who wish to register ProTracker and get the full version can still do so thanks to a recent agreement between Karl Anders and Merlin PD in the UK. Seeing as Merlin still hasn't posted a press release regarding this, I'll post a temporary one in a separate artice. I was involved with arranging the deal so my information is more or less quite accurate.

> What I'm looking for needs to work on a Mega ST with a colour monitor.

>possible, it should be interrupt independant (not use the VBI during
>playback) Anyone know of such a beast?

Audio Sculpture, perhaps? I can't say for sure if it does support "E" commands, although having used the demo I can only say it's very quirky. Some nice features though, like proper notation.

Octalyser is nice in that it uses a modular approach to replay, allowing different sound drivers to be used (choose the one that's best for your chosen application - e.g. all effects, fast replay with less effects etc.)

Too bad you have a MEGA ST. Why don't you get a secondhand STE? It won't cost that much and for soundtracking it'll blow the MEGA ST right out of the water (please don't be offended...)

Just wanted to relay a personal experience...I recently switched Internet providers to get a better deal...I called to 1-800 number to sign-up and activate my account...the phone rep. (some young girl) got through the questionaire with no problems until she reached the part about what kind of hardware I was using (so they would know what kind of software/instr. to send in the sign-up kit). The conversation went like this:

Phone rep: "and what kind of system are you using, Mr. Hall...PC or Mac?"

Me: "well, actually I'm using an Atari..."

Phone rep: "Atari? Atari 2600? My older brother had one of
those-I didn't know you could use them to logon to the 'Net?"

Me: "no, its not a 2600-its an Atari computer"

Phone rep: "Really? I didn't know that Atari made computers...I thought they were a games company."

Me: "They produced some of the most innovative computer hardware in the industry until just quite recently...now 3rd party companies are taking up the slack where they left off."

Well, thats the long and short of it...I went on to deluge her with TOS advantages and the long history of Atari etc,...

>welcome.

>Best Regards,

>William

Hi William!
I just tried to do the same. ST Format no. 41 had a plan to do that.
Atari lead. VGA lead
pin 4 + 13 to pin 4,6,,7,,8,10,11
pin 9 to pin 13
pin 12 to pin 14
pin 11 to pin 1,2,3 via a 4700 Ohms resistance

I did that and got nothing...
I then took the resistance off and got a scrambled screen.
I will try to adjust the knobs inside the monitor to adjust the H and
V frequencies... May be it will do it...

Hello Aaron,
here is the pinout for the monitor port

pins no.

4=Mono Detect
6= Green
7=Red
9=HS
10=Blue
11=Mono Out
12=VS
13=Ground

Pins 1,2,3,4,5,8,11 don`t connect.

>kind of stuff.

Well, they're not the best, but Ultima 2 and Giligad (Shareware) both
run in Mono. Also there's an oriental themed RPG from Origin that
runs in mono, but I can't think of the name.

You also might want to look into a color emulator, I've tried a couple,
they're not incredible fast, but they work. They should be fast enough
for most RPGs, though.

It's getting thinner because the market is shrinking, but then again AW makes a real effort and manages to produce a lot of quality reading material every month. Just like ST Review did, only better. How? More writers, more enthusiasm.

>Before you start saying that I want the mag to go down the drain: I
>have been buying STF since about issue 12, I know that its not since
>issue 1, but its pretty close. I have almost all of my back issues,
>and coverdisks from them. I've been subscribing since about issue 21,
>and don't really want to stop. But when you see mags like AW getting
>thicker and thicker, and STF going the other way it just doesn't look
>good, no matter what you say.

I think the current issue of AW (number 11?) has actually gone down by two pages, but as you say, is still a comparatively hefty title. I am pissed off that STF lost its once very high standard - and I've been buying it for a long time too, since issue 25 in fact (a whole YEAR before I even *owned* an ST - what does that tell you?!), so I know.

The price of 4.25 has been increasingly harder for me to swallow, and that would not be so if the content was as good as it used to be, regardless of page count.

If Frank and co. are wondering why people are *really* moaning about STF, they should take a look at some old issues (about pre-40/50ish, and learn a few lessons, or maybe ask themselves why Karl Brandt gave them such a telling off for their Desktopper review, for example.

I've seen the latest STF, and it looks a big improvement. If it hadn't gone down in the first place though we'd probably have an absolutely mindblowing magazine by now.

> powering off the STF?
>

If I want to boot from a floppy on my STFM, (TOS 1.04) I just put the
floppy disk in the drive, use the Control Alt (right) Shift & Delete keys
to reset the machine & then hold down the Control Alt (left) Shift keys
AFTER the floppy light comes on.

This allows autobooting floppies to take control.

You can do this even after the hard disk has booted.

This should work for TOS 1.02 also.

> also insult anyone??? I'm just lost here?

Well, you obviously caught me being a little unprecise; I really
should have quoted more text from the original article. I dont even
have it anymore, so I'd better stop criticising the author. Only thing
I remember was that it sounded to me like 'Why cant you Atari people
do something like the Netscape browser and stuff?'

> lazy' consumers, too! :) :) In fact, if I really tried, your &
> Martin's replies could almost appear insulting to us software
> consumers... That was not, of course, the intent of either of you,
> and we're all just having a pleasent conversation here... :)

Of course I do not, will not, in future or past, insult anybody in
this whole world B-). I didn't even felt INSULTED by that first
article; I just felt like being ACCUSED while being innocent.

> so I may not have worded my comments _exactly_ as Julian did. But
> hey, all we hear in the mass media is the wonders of Netscape, and
> how cool hooking up to the Internet is ... How can you blame the guy
> for wishing for the same thing for us Atari users? On here we see
> lots of problems using Atari on the 'Net. It might not be true, but
> it _appears_ the 'Net is easy on clones, impossible on Atari :)

Well, here we come to the point: what I'd REALLY like to see here is
a little more realistic approach of some Atari users.

Whenever I read or sense the sometimes hidden comparison between the
net packages for Atari and for the PC compatibles, I'm tempted to
stand up and ask people if they want to compare multi billion dollar
companies to convinced users that write internet programs because
nobody else does. Let us not loose our sense of reality here! Let's
not be impressed and made envious by publications that tell us what
to take for granted!

We should be GLAD about every move toward connectivity on a platform
that is - let's face it - hardly supported anymore. We should be a
little PROUD if some PC user finds it unbelievable that our machines
are in fact able to email, to receive news and even to browse.

Of course it is annoying if you want just load and run and are stuck with the Atari. But even then, what does it help to dream about 'plug and play'? A more positive attitude could be to support all constraints of improvement, to accept what is there and to help and get helped with any problem that comes up.

That is - I admit - the steep, stony and narrow road ... ;-)

> Internet, & I'm really wishing for a stable software package, to
> eliminate the _beta_ part of this equasion. I hear it's coming as
> fast as it can, so pardon the enthusiastic (if awkwardly stated)
> crys of, "Hurry up!" :) :) :) :)

Enthusiasm is one thing we really need, so dont excuse yourself for it :-)

4973. TOS 2.06 question

Newsgroup: comp.sys.atari.st
Date: 1996-03-19 00:00:00 UTC
From: ae490@ccn.cs.dal.ca
Message-ID: <4il7dn$ds2@apollo.isisnet.com>
Source record: 148779

I was wondering if anyone knows how to install TOS 2.06 in an Atari 1040STE computer? Is it easily done, and if so, which way should the writing on the chips be facing (upside-down or right-side up when looking at the board from the front of the computer)? Do the chips also have to be in any particular sockets, or does it make any difference? I was also wondering if there's any chance of damaging the chips by installing them the wrong way. If anyone could help, I would be very grateful:-) Thank you.

From: jnorton@ra
Message-ID: <4imr6a$24k@thoth.nilenet.com>
Source record: 148785

Is anyone using any of the following printers with Pagestream?

Epson Stylus2
HP Deskjet 660C
HP Deskjet 855C

Are there Pagestream drivers for these printers?

I thought about getting either an Epson Stylus2 or HP660C, but I didn't know
if they came with both black and color cartridges installed. Also,
whether or not they used the black when printing color instead of mixing
all the colors together to get black.

I jut see one posibility. That is to ue the ST as a Printer Server. You connect the seriel Port of the PC to the serial Port of the T and start Programming...

It hould be the easiest, to use a Postscript printer driver At the PC and filter the inputs from the serial Port through Ghostscript, before you forward it to the Printer.

May be this is one of the chaepest and most flexible sollutions to build an Poscript printer whith any possible Extentions like Hard Disk, lots of Ram and Lots of Ram (Pck030 with Frak...) and o on...

It could be, that there are alo other sollutions available, bit I never heared about them.

4983. Convert IBM mouse to ATAR

Newsgroup: comp.sys.atari.st
Date: 1996-03-19 00:00:00 UTC
From: tderrick@acpu.com
Message-ID: <960319090010296660@acpu.com>
Source record: 148789

Ben Hugh Weld <bhweld@capitalnet.com> asked:

B > Can any one tell me what the RS 232 9 pin mouse port
B > connector, pin out specks are.

I printed the following in our newsletter. I do not know whether it works, or not, but it should give you a start, anyway.
(snip)
The following are some instructions I got off one of the ST ftp sites about connecting the Microsoft mouse to the Atari ST mouse port. I believe the credit goes to Jeff Beadles on the Internet at <jeff@onion.pdx.com>.

How to hook an Microsoft mouse to an Atari ST.

No software changes are required. All it takes is creating a special cable between the mouse and the Atari.

I've been using a Microsoft mouse now for around 2 years on my 1040, with nary a glitch. It's so much better than the Atari mouse, I'd never go back. (IMHO)

Well, here is how to connect a Microsoft Mouse to an Atari ST. (520/1040) The Atari has a 9-pin D-type connector. The Microsoft Mouse has a rather strange connector on the end. To prevent having to cut the mouse cable up, I made this adaptor. If you still can't follow it, please let me know and I'll try to redescribe it. This does work for me. I've been using it for 6 or so months now [Note, it's been 2 years now!] with no problems at all. It does take some soldering skills, so if you're not so hot at soldering, find a friend to help.

As far as I know, this does not affect your Atari's warranty. However, I have not asked Atari.

Atari ST	Microsoft Mouse ST	expected signal
1	5	XB
2	3	XA
3	8	YA
4	9	YB
5	N/C	N/C
6	2	Left button
7	N/C	+5VDC (N/C)
8*	6	and also tie to pin 1 Ground
9	7	Right button

* = I am not sure why I have pins 6 & 1 tied together, but it does work.

The Microsoft mouse connector looks like this. This is the solder side, with the leads pointing up.

```
---------------
| 1 |
| 2 3 4 5 |
| 6 7 8 9 10 |
| |
---------------
```

If you can not use the connector, the pins are numbered as follows. This is the connector side from the Microsoft Mouse plug:

```
/------------\ This is a view at the front of the
connector.
/ Blank "KEY" \ It is where the plug from the mouse
would be.
/----------------\ The pin labeled 'n' is not connected.
| n 4 X 8 | The place labeled 'X' is filled, and
does not have a pin.
| 9 7 1 2 |
| 5 6 |
\ /
\------------/
```

(snip)
I apologize if this comes out making no sense.

From: damms002@acpub.duke.edu
Message-ID: <4imvnf$jqv@news.duke.edu>
Source record: 148790

I have a 8 MB ST-RAM card for TT030 for sale.

It plugs easily into the ST-RAM expansion bus of any TT030. As one might know, the ST-RAM is not quite as fast as TT-RAM, but it is more versatile and can be used by all applications any time. It does not depend on whether the programm uses TT-RAM or not.

This can be especially important if you try to run several applications under Magix or other multitasking systems.

The card goes new at Toad computer for 649.- US$

I'm asking 400 US$, obo.

In article <827285922_OASIS_@martinr.hookup.net>
martinr@martinr.hookup.net (Rick Martin) said:-

|You know to show you what i'm
|talking about a friend has a TT with a Nova card and Oasis won't work
|on his system . But he won't disconnect his card just to be able to
|use Oasis.

I don't want to get into a flaming session, I only want to point out that
I'm using Oasis on a TT with a Nova Card installed. Perhaps Oasis does
fail in a _Nova_ mode as I have not tried that, however it runs quite well in
standard TT modes and has for the past couple of weeks.

|So in this group the other day I found the answer was as simple as putting a
|* in your NNTP.DAT file after the group name . I asked Phil about this
|at the time but he had never heard about this problem so here is a
|case for the creation of a FAQ that would of save me the time of
|switching services.

As for the problems with the "*" that some of us seem to suffer with, that's
on your news servers end and really has nothing to do with NOS or Oasis. It
does not suprise me that Phil had not heard of it. Write your internet
provider and tell them that their news server software has a bug it in.
I did.

I have the following Atari-related items not yet accounted for. The
figures given are either what I would like to get. I have had offers for
some of these items, but I'm looking for more than what I've been given.

Mega II ST system: ($200 for all, OBO)

Mega II ST
Quantum 42 meg HD
Miniscribe 45 meg HD
ICD HD controller, software, and cable

Note: The Quantum sticks. If you want to run the Miniscribe without the
Quantum, you'll need a SCSI terminator, because the Quantum is acting as
a terminator for the Miniscribe.

Software with packaging:
(Make an offer for the whole lot or for individual items. Items are
grouped into the units that I would like to sell, but it's not carved in
stone.)

Warp 9, version 3.8 $15
Universal Item Selector III $15

Warp 9, version 3.75 $5

El Cal 2.2 $5
DB Calc II $5

Word Up $15

GST Macro assembler, version 1.0 $5

Orbiter $5

Lattice C, version 5.5 and 5.6 $100

Assem Pro $10
Laser C, version 2.1 $20

Just disks: (make an offer for the whole bunch)

ECO
Populous
Populous The Promised Lands
Silent service
Millennium 2.2
Sundog
Lisence to kill

Michael Jackson Moonwalker
The Real Ghostbusters
Tempest
Degas

From: Brian-Roland Miller <brimiller@delphi.com>
Message-ID: <ZVHoMf+.brimiller@delphi.com>
Source record: 148795

Rick Martin <martinr@martinr.hookup.net> writes:

>My post asked specific questions about the new version and never
>flamed the Authors in any ways . One of my questions will Oasis
>work now with Magx far from being a tough question !

A couple points.
-
1) The new Oasis will be far and away the best integrated internet
connection pack for TOS so far, at a price that's got to be one of the
best bargains in computerdom. While constructive criticism is fine
(and encouraged), making references to the intelligence of the
developer is not wise, for you or other users.
-
2) Oasis is not yet complete - thus, some questions may not be answerable.
I don't understand why the alternative-OS (magiC, Geneva, etc.) crowd
doesn't understand that beta-testing on all these platforms in addition
to standard TOS (especially with the size of the development team) is
timely and expensive. The fact is, standard plain-vanilla TOS will
rule the day as the base level of compatibility until C-LAB, Medusa
and other TOS makers decide to choose one of the newer OSes as standard.
-
3) Patience is a virtue. Why not wait until the software is released,
ible? Sometimes, I think
that program authors shoot themselves in the foot by announcing programs
before they're generally available.
-
4) All this triping that you're engaging in will do one of two things - either
make it so software becomes a "surprise," as developers wait until release
before they share any information, or worse yet, will drive them to the
PC platform. Neither one of these is a desirable option, and I greatly
wish you would either put up or shut up. I don't want your hostility
ruining this release. If you want developers you can easily abuse, get
a
Pentium tower and a copy of Windows 95.

Notes on registration as of 1996

UK registration of ProTracker ST is now handled by Merlin. A fee of 15 pounds brings you the following:

* Version 2.02 - the latest revision with all features enabled, including songlist for multiple modules in memory, and sampler support.

* Updated GEM player program/accessory.

* Full manual on disk, and a printed copy for your convenience.

* Official ProTracker sample disk with 102 sounds (the authors have decided to cut the final package down to two disks).

* Documented replay routines for inclusion in your own programs.

* Bonus Merlin sample disk.

* Complete Merlin user support service.

Overseas registrations welcome, please contact Merlin for details.

Source record: 148803

daveb@mbha.demon.co.uk (Dave B) spake thusly:

DB> I don't know what the current version of UIS is... I may have
DB> an old one...

The latest version, 3.32, /is/ old. 3.32 was a patch to make it work on the TT - about 1991.

OTOH, uis only misses a couple of features that I would like: the ability to hold the scroll position between calls. With large directories, scrolling down for each of many files (between actually reading them, for instance) gets to be a drag. I heard that one or more of the non-US ones would 'hold position' - which ones? And I would like having (or hooking into) a text viewer with clipboard support, in addition to other advanced features. Is the author of Superview listening? If Superview had clipboard support, and would hook into UIS, I would be extremely happy. At least until next week :). Then I would want a picture viewer (*all* formats supported, naturally :). Hooking ImageCopy into UIS would go a long way in this area.

I have heard rumors of a v4 of UIS, but I am not holding my breath.

Issue 80, page5 (first column in the footer):

12-issues: £45, etc

Not cheap, and a lot more than the old £30 rate, but for those who prefer the style it compares well with £56 for Atari World with their monthly disk.

How much are they asking for renewals?

I think people should realise that it's not STFs fault that it's had to shrink a lot recently. Compare STF with some of the Amiga mags with similar readerships (Amiga Power ?) and that has about the same number of pages and is about the same price. I would like to know though, if the price of paper ever does go back down, will the price of the mag fall, and the page count go back up.

On the WWW site, I would appreciate it updated a bit more often as well, and like to see the latest issue plugged on it a bit more heavily as well. The FTP site could also have on it all the PD stuff that they have reviewed - now that would be useful - even if it was a month or so after the reviews, just to keep the PDL's happy.

Oh well,

that's enough from me,

James

Source record: 148809

I've got a number of Atari ST software packages from the 1987-1989 era
for sale/trade, all legal and in original packaging:

Atari's Neochrome
Cyber Paint
Cyber Studio
Hybrid Arts' EZ-Score Plus

FTL's Dungeon Master
Sierra's Leisure Suit Larry 1
Sierra's Police Quest 2
MichTron's Time Bandit
MichTron's Airball
SSI's Phantasie
Atari's Joust
Electronic Arts' Skyfox

I've also got a couple years' worth of ST-LOG and Atari Explorer
magazines from the same period if anyone's interested - they might be
valuable for nostalgia purposes but probably not worth the shipping cost.

I'm asking for $10 per package (shipping included), but will consider
offers or trades of old Atari 2600 videogame cartridges/new Atari Jaguar
cartridges. Reply via E-Mail if you're interested. Thanks!

<e5he@etek.chalmers.se> writes:
>Hello!
>Is there a way to convert data sent to the printer to a Postscript file,
>like in some UNIX programs?
If you are sending data to a postcript printer, programs like PageSTream
and Calamus allow you to print to file, rather than the printer, thus creating
a postscript file.GDOS programs such a NVDI also allow to create a "print to
file" driver that will also create a postscript file, whicvh can later be sent
to a postscript printer.
I myself am looking for a program I can use to print a Calamus file to my
SLM804, with out having to install Calamus on my ST (I have it installed on my
Falcon).
Does anyone know of a program that will do this? (print a CDK to my SLM?)

I, totally, see your problem! You cannot read the docs, at all!
I, also, purchased the compendium CD from Toad. There are lots and lots of
docs for the Linux files on that CD. Everything is in the /files/linux.68k
folder, there is even a faq included. I'll grant you that some of the
docs are in .tar files and some are compressed (with a .z extension), but
there are lots of instructions included!

I was usind 6.4.2 on a Falcon, and didn't get as far as you - during the Magic boot sequence, I got a 'Fatal Gemdos error - system halted' message :-(

> Can I swap to another driver such as AHDI without reformating the HD?
> (I'm using BGM partitions.) Or do later versions of the ICD drivers work OK?

Mine was a later version, and it didn't work. I switched to HD-Driver 4.x and all is well now. I was told that I'd need to re=partition, etc, but thankfully that was not the case.

RT> he gets my full recommendation for ALL platforms if someone
RT> asks me who the best provider is in this area.

Okay - don't keep us in suspense. Who?

We had the local guy from Primenet at our Feb user group meeting here in Boise. He is an enthusiast, and certainly was not interested in shining us on. (He did find it necessary to defend M$ against the incendiaries that are routinely thrown in their direction at our meetings. Maybe we should vary our program a little - my sister's Mac offers a fairly large and funny target....) He has been working with our librarian on getting CAB/STiK working and available to Atari/Primenet users.

Come see the GodFather Computer, Inc. WWW pages at:

http://www.godfather.com

See the Whats New section for up to date pricing on Apple PowerBook and MagicMac bundles we are offering. We also sell refurb and used Apple PowerBooks that can be bundled with MagicMac to make an inexpensive Atari TOS compatible notebook.

Remember the Atari STBook that Atari was making. Well that never happened to my knowledge but an Apple PowerBook/MagicMac bundle is a great unit to look at.

We also sell Apple Desktop Atari TOS solutions. We are a complete Apple VAR. We also sell the very popular Gemulator from Branch Always Software. Together with our excellent Pentium Computer Systems, they make for great upgrade paths for the older Ataris.

Keep us in mind for your next Atari Clone Need.

Walter Hellman <hellman@teleport.com> wrote:
: Hello All,
: For those of you still using Flash: Have you found a way to get
: a block of text from the buffer to the terminal screen without all that
: extra garbage that comes in when you do "upload block"? The garbage
: characters outnumber the text characters about 4-1. I am on a UNIX
: system, generally using pine, and have found how to get rid of the
: garbage, but not how to avoid it in the first place.
: Thanks for any help.

Ummm: Right under/over the menu item for Upload ASCII is Upload X Modem.
First, at your unix shell host prompt, type rx foo.bar, and wait for some
words to appear. Then, hit the left mouse button to get the pulldown
menus, and select Upload X Modem. That will produce a file selector, and
you select the file that you have previously typed and saved.

If all goes well, you will soon have a file named foo.bar on your unix host.
In pine, with the cursor in the text area, in compose mode, hit ^R, then
^T, which will produce pine's file selector. That file you just uploaded
may be in your mail directory, your home directory, or elsewhere,
depending on what directory you were in when you typed rx foo.bar. You
might try typing pwd before typing the rx bit, to see what directory it
will go into. Anyway, find foo.bar, hit s to select it, and the next
thing you see is the compose screen with your text neatly inserted.

It may have a string of padding across the bottom. That is a setting for
flash x-modem. You either get a string of control z or a size byte to
round out a transfer block. ^K will delete that line.

5018. WWW Assitance With CD ROM

Newsgroup: comp.sys.atari.st
Date: 1996-03-20 00:00:00 UTC
From: nurmix@gateway.ecn.com
Message-ID: <4iqhic$1u5@gateway.ecn.com>
Source record: 148718

Just a little note to Atari users running STiK/CAB:

I just purchased a book called "New Rider's Official World Wide Web Yellow Pages" that came with a CD ROM. This CD ROM contains all the web sites that are listed in the book in HTML format. So, I put it in my CD ROM drive, fired up the Falcon, logged on to my Internet SLIP provider with STiK, and then, once within CAB, I just loaded the "Welcome" document from the CD ROM. I was then presented with a "web page" listing the various catagories on the CD ROM. After choosing a catagory, I was then shown the web addresses and info about more WWW sites than I could count. And finally, having chosen a good site, I simply clicked on it's name, and CAB took me there.

This is very handy, and works quite well. Now I've got a huge list of web sites just a mouse click away!

If you are running CAB/STiK on your Atari, AND have a CD ROM drive hooked up, I highly recommend you get this book/CD ROM! It cost me about $25 (US) at my local Fry's Electronics. And I'm sure you can find it in any good computer store. It's the 1996 edition, and it's by New Riders.

Now if only CAB worked a little better... <grumble grumble>

>As far as I know (I have tried many combinations) it is not possible to make
>ful bombs. If you figure out how to make one please post it. Good luck!
>--
I have made ful bombs in the past (not in real life, obviously), but I cannot remember how to make them now. Sorry. I know that the symbols have certain meanings, for example there is one for fire, and there is also a symbol combination for making potions (as far as I can remember). The symbols needed could be a combination of the two, but I really can't remember since its been about 6 years since I completed DM and 5 since CSB. I have them written down at home (about 500 miles away), and will try to remember to bring them back when I return from there in a few weeks time.

Incidentaly, I never finished CSB completely. I got to the place where I was supposed to meet the Overlord or what ever he was called (shows how long it is since I've played it) and I could not find him. As far as I remember I got all 4 of the crystals or lumps of rock or what ever they were, and destroyed them. He never turned up, though, so I was left wandering around this area with nothing to do. After the excelent ending in DM, I was mightily disapointed. I wonder if the game went wrong somewhere, (I have an STE). Still, they are excelent games. Good luck with them.

Graham

I have finished the first Beta version of the email import/redirect program and an associated program for using FIST with US providers. I'd like 2 or 3 people with AtariNet addresses in the USA (or Canada) to test this thing before I go for a full release; I'm using it now, and while it isn't pretty yet, it's error-trapped and probably won't cause your cat to grow feathers immediately.

>I also have a ST with a MegaFile 30 that I would like to upgrade with a
>larger disk. Will a Seagate a Seagate ST279R work with the MegaFile 30
>controller?
> Any help would be greatly appreciated.

Seagate drive types are easy to read:

The "R" says it's an RLL drive as required for the MF30 controller.
The leading "2" tells us it's a 5.25" half height drive, the same size as the
MF30's original ST238R. The rest of the numeric code, "79", means the drive is
79 MB _unformatted_ capacity, and will be about 62 MB formatted.

You need the drive's geometry parameters (heads and cylinders, sectors per
track always is 26).

The only DON'T case is if it is a 30 sectors per track 3000 rpm "slow spin"
drive - these don't work on Adaptec controllers like the MF30's RLL end.

bye, Peter

5029. 1stWordPlus to IBM PC HELP!

Newsgroup: comp.sys.atari.st
Date: 1996-03-20 00:00:00 UTC
From: cggiles@bradford.ac.uk
Message-ID: <cggiles.19.000B2B72@bradford.ac.uk>
Source record: 148815

I have about 10Mb of 1stWord Plus files on my Atari 520STFM floppies (no HDD on my Atari) and I want to move the data to my 386 PC. Then I want to word process it with AmiPro or Word or Works (all Windows versions). Can anyone tell me how to do it, please?

I have a utility for the Atari, 'Blueboot', which rewrites the FAT on an Atari-formatted disk so that an IBM can read it. Unfortunately, it can only do it with blank disks - I lose all the data if I do it to a full one. Okay, I could get a bunch of new disks and copy all the files, but I only have the one disk drive and the first version of TOS, so you can imagine the number of disk swaps - we're talking several hundred separate files to copy!

Does anyone have a utility which will rewrite the Atari disk FAT so that it can be read by a PC, without scrambling the data?

Or could I somehow link my ST direcly to my PC with a cable and sent the files straight to the PC HDD? I don't have any software for this on my Atari.

Then there's the problem of getting the PC WPs to handle my IstWord+ files. I'm desperate not to have to change them to ASCII and thereby lose all my formatting. Is there a software converter available?

Thanks.

Chris

They are for the Atari "Power Pads" - the controllers used with the atari jaguar game console. I believe they were originally designed for enhanced joysticks that never appeared at the time of the STe peak. A few games use them, but not as many as one would have hoped... They can also be adapted to provide power to drives such as the IOmega Zip etc with a lot of tinkering. :)

Elias Martenson wrote:

> gzcat blafasel.tar.gz | tar xvf -

AFAIK is gzcat a shell script. but there is another possibility for
files like

laber.tar.gz:

just use

tar -xvfz laber.tar.gz

This is not a shell script but an option of tar. For gzcat you need
something like a kornshell, or a bash. All you need to do for this is
set an Environment variable named PATH where the path of gzip is in it.

It is also possible to tell tar whitch packer to use, as long as the
packer accepts -d for decoding. I don't really remember how that works.
just RTFM...

Christof

ON> won't run. I've heard that there is a patch. If you have this
ON> patch, please e-mail it to me or tell me where to get it.

Actually, you need two little prgs, tos14fx2.prg and
poolfix3/poolfix4.prg. They both go in your auto folder - I put them
near the front. If they are not on your local bbs, they ought to be.
But they probably won't fix _all_ of your problems. If you can't
find them anywhere, email me and I'll send them.

What prgs won't run? I don't recall losing much when I went from 1.2
to 1.4. I am told that 1.4 was a real game-killer, though.

I don't know what you can and can't do with the old 5,25" drives.
But the modern 3,5" drives can all be mounted and operated in _any_
position, upside-down, at 45 degrees, you name it. No problem.

My Falcon is currently at System Solutions to have a Blowup FX fitted.
They assured me that it would be compatible with Cubase Audio: in fact
Cubase Audio is the No.1 application that *has* to work. A Falcon
that can't run CAF is like a TT that can't run Calamus, or a PC that
can't run Doom ;>.

Are 100Mb drives still *made*? At regular intervals, disk capacity doubles, but
you pay exactly the same amount. 500Mb - 1Gb drives are dirt cheap nowadays. Go
for one.

I have a 540Mb Quantum (Maverick) in my MEGA - that's almost a year old now and
there are even better value and performance mechanisms available for the same money.
The MEGASTE controller needs the drive's parity disabled though... Maybe if you can
get a bargain on an LPS 105S you should check that the parity can be turned off.

5052. Atari Binaries and Sources groups removed

Newsgroup: comp.sys.atari.st
Date: 1996-03-20 00:00:00 UTC
From: avg@cwi.nl
Message-ID: <avg.827333093@news.cwi.nl>
Source record: 148838

We recently had a discussion about removal of the Atari binaries and sources groups

comp.binaries.atari.st
comp.sources.atari.st

and the majority (over 80%) of responses suggested that it would indeed be good to remove the groups.

They have been removed now. For distribution of Atari sources or binaries, the best plan of action now is:

> upload the packages to an ftp server or make them available on the world wide web

> post an announcement to comp.sys.atari.announce and comp.sys.atari.st including a list of locations where the package can be found.

This will guarantee an almost equal reachability, and will for most people make it easier to download packages (no need to use uudecode for example).

A number of submissions to the binaries group (the last 6) have not been posted, and will not be posted. I will inform the posters individually.

There are several PD/shareware programs which converts one particular
filetype (eg. *.IMG, *.GEM etc) to postscript file.

Im currently developing a postscript printer shell which convert
several file types into PS files (module based). I have downloaded an early
version on HENSA, this version converts only ASCII files into PS files.

The main obstacle in the developing of this program is the command line
parsing in HiSoft Basic (which is the language im using) which I havent
fully understood.

cheers

Karl

5056. Wanted: Falcon (UK only)

I'm looking to buy a Falcon to replace mine that has broken.
I only want the motherboard ideally, ie no drives or memory or such like,
but it would be much easier to ship in it's case though!

So if anyone has one for sale, please let me know.

Note: I am in Cambridge, so the closer the better, although I am willing to
pay for delivery too.

Thanks very much,
Phil

Wouldn't you know it? The new Atari Compendium CD works exactly the same way!! (In fact, CAB resides in executable form right on this CD. Means you can run CAB and access the Compendium directly from CD, no hard drive required!)

You could use MinT with X11. AFAIK is Xfig available in the source. then
just compile it and run...

Another possibility is to use another format and convert it whith any
standart converter. Or just use Postscript. I might be wrong, but I
think, Xfig can use Postscript.

5063. Patch of MAGIC.RAM without IDE in a F030

Newsgroup: comp.sys.atari.st
Date: 1996-03-20 00:00:00 UTC
From: Lars L&#65533;he <lhl@schwerin.netsurf.de>
Message-ID: <3150B0D0.292E@schwerin.netsurf.de>
Source record: 148849

```
Hallo Falcon-users without IDE-HD,
Because the News-Server of my provider seems to be crashed, i can't
pin this news at the older news.
Here is a patch found in:
Group: MagiC
ID: A171@ASH
Wg.: Boot-Accelaration for MagiC!/Falcon (without IDE-HD)
From: Hans-Peter Vetter @ ASH
MId: 199601101220.a171@ash.maus.de

---------------------------------------------------------------------
All the following is without any guarantee!
---------------------------------------------------------------------

You have to patch a word in the file "MAGIC.RAM".
There you have to search for "$FFF00039".

The disassembled code at this point is:

T_5A38: movea.l $8.w,A0
movea.l SP,A1
--> move.l #T_5A8A,$8.w
--> tst.b $FFF00039
move.l A0,$8.w
move.w #$10,D0 ; Device: IDE-0
movea.l $4C6.w,A0
lea $800(A0),A0
jsr T_C022
move.w #$10,D0 ; Device: IDE-0
movea.l $4C6.w,A0
lea $800(A0),A0
jsr T_C172
move.w #$10,D4 ; Device: IDE-0
bsr T_5B60
tst.w D0
bne.s T_5A90
bsr T_5B0C
tst.w D0
bne.s T_5A90
rts
T_5A8A: movea.l A1,SP
move.l A0,$8.w ;bus_error

"T_xxxx" is a label, where you can find any other adress at your system.
If you have found "$FFF00039" you can replace the opcode of the "move.l"
($21FC)- standing in the line before "tst.b $FFF00039" - with a opcode
```

of "jmp" ($4EF9)".
With that patch a bus-error during tried access on IDE-interface is
simulated -> no more waiting for an IDE-boot.
Now the SCSI-Boot follows the Floppy-Boot.

The waiting for IDE-HD from ROM-TOS is still alive! You can patch that
with FASTBOOT (Version *4 i think) wich is writing a executable
bootsector on a "BOOTDISK". However, you have to remove this BOOTDISK
from floppydrive before -> MagiC <- tries to read the bootsector of a
floppy - otherwise you will get bombs. This is due to the patch is only
working with TOS 4.* !!!

Good Luck Lars H. Luehe

There are 2 files on the atari.archive.umich.edu or one of it's
mirror sites (ftp.toad.net is a good one) that should be able to do what
you want. dcfmt302.lzh will write a ibm boot sector on the disk without
loosing your data! file 1wp2rtf.zoo with convert 1st word plus docs to
rtf format. As for copying the files to new disks, I remember the problem
you are having from my early days! Kind of a solution is make as big a
ram disk as you can and copy the files from the original disk to the ram
disk and then to the new ibm formatted disk, there is even a ramdisk
called maxidisk that uses compression to store something like 800K in a
500K ramdisk that one should help out some on a 520!

5069. Survey...

Newsgroup: comp.sys.atari.st
Date: 1996-03-21 00:00:00 UTC
From: daveb@mbha.demon.co.uk
Message-ID: <827506032_OASIS_@mbha.demon.co.uk>
Source record: 148606

Well, that's just about it. I am fed up in a serious way with Demon, as far as I can see they are amateurs in a professional game and I am sorry I ever opened the account. BTNet here I come... just as soon as I can get the account open, and a list of my problems with Demon are going straight to their publicity/marketing machine.

Now. The survey bit.

Who else has been losing mail/posts? I have a new newsgroup started on March 1st. Approx 605f all posts have been lost by Demon.

I have posted the same message to Col Bernau in Australia 3 times. The third one got there. Again, a 605ss.

I have sent posts to other groups. I sent 9 yesterday. None have arrived. That's a 1005ss. And for this I have to kick the newservers up to 50 times or give up and get pissed.

I have spoken to the help desk. No-one knows about a problem with missing posts. Word around the net is that the demon mail2news if dodgy. Demon don't know. Phone calls don't get returned, it's nobody's fault and no-one knows how to fix it.

I have spoken to their customer services manage Ros Clifton today and last week. A waste of effort. The reaction? Nobody's fault. Want to go to BT dave? Do what you think is right (!)

These are cowboys in a competitive game. Mark my words guys, Demon is going to get massacred when the competition heats up. They're not good enough at their business to survive.

So far as I am concerned these guys are a complete joke.

>Can anyone tell me which is the best pd library in the UK?

Some of the good ones I know are:

16/32 Systems
FaST Club
Goodmans
LAPD
Merlin
PAGE 6 (I'm sure they're still around. The first ST PD library in the UK!)
Riverdene

Really they're all pretty much the same and give good service. You'll find some interesting commercial products from most of the larger ones too (16/32 for games, graphics and audio applications, Calamus DTP from Riverdene and lots of games from Merlin)

But is there a Postscript driver for NVDI?? That would be great, since
I could create a Postscript file from every program that uses GDOS for
printouts.

Or is the postscript driver part of the Postscript extension which
can be seperately bought from 2B?

Christoph.

If you don't want to see low rez again on an STe, use ste_fix.prg
and save desktop.inf in medium rez! This will work for both med and hi
resolutions! Didn't know that you could get med rez on a TV! Never tried,
I've got an SM124 and a SC1224, so never had to go the TV route! Must be
hell on the eyes in medium rez?

OK, people. Sorry to post again, but I do need to sell this thing (i still need to go portable, and them Stacy's is a bit too expensive)

Anyway, you probably know what I have, but here it is again:
Mega STe 4, TOS 2.05, 1.44 floppy, 170 meg SCSI
MultiSync and Monitor for all 3 res, SM124 monitor, software
(GOOD MIDI sequencing packages), etc.
if you want parts, ask. will sell to best offers. please contact me soon as i will sell locally if i dont over this group.
I know some people have talked to me before about this, and if you did, write again, cause i am ready to sell this.
Thanks a lot

Hi Ian,
If I remember correctly, you should press and hold either Control or Alternate at boot-up (I always seem to forget which one). One of them bypasses the harddisk altogether and the other one reads the driver, but nothing else (like Auto programs or accessories).

Best regards,

Claes

> info on how to go about doing it would be VERY appreciated!!!

Hi Mark,
If the disks are formatted to 720kB on your PC - just go! You'll be able to
read the disks without any problems.
If they're 1.44MB - forget it, if you haven't upgraded the STe with a
1.44MB-drive.
Some drives in ST/STe can't use HD-disks at all for some reason. If this is the
case with yours, you'll just have to use DD-disks.

Good luck!

Claes

This happens to me when I try to put my cache dir on a minix partition -
I use CAB 1.0 w cab-for-mintnet overlay v1.64. It seems to work
reasonably well when the cache is on a TOS partition although there are
still a LOT of cache error - as well, it doesn't ever seem to go to the
cache when I use back! It always seems to go to the net to reload.
Something is fishy.

AFAIK, there are no providers here in the Lower Mainland of BC that offer
free test time. Some offer a discounted one month trial though. As for
Uncompressed SLIP, I've only heard of one place that offers it and it's
a BBS, not a full ISP. It' also a long distance call for me. Most providers
here only offer PPP or CSLIP.

5095. transfer data Atari ST -> PC

Newsgroup: comp.sys.atari.st
Date: 1996-03-21 00:00:00 UTC
From: glauset@il.us.swissbank.com
Message-ID: <4irksn$9ef@op1d421swk.il.us.swissbank.com>
Source record: 148632

Friends of mine have an application on an Atari 1040 ST to manage addresses.
They have spent many hours to enter data over the years. Now they would
like to transfer the data to a PC somehow.
Unfortunately, floppies written by an Atari seem not to be readable.
Is there any known procedure to transfer data as described? It would be
sufficient if I could just get a flat file readable on the PC with the
content of the floppy. Reformating, discarding of control information etc.
could be done afterwards without problems.

Any help would be greatly appreciated.
I can be reached by email at thomas_glauser@swissbank.com, too

a> run on a DOS computer and would like to read the text on them with my
a> Atari STE computer. Is this possible? If so, any info on how to go
a> about doing it would be VERY appreciated!!! Thank you:-))

You need either to have the high density modification on your STe, or the
disks must be formatted to 720k on the DOS box. Otherwise, text is text;
load it into any plain-ASCII editor/reader and enjoy.

There is nothing wrong with the FAT - it's just that MS-DOS insists on getting the proper Media Detection Byte in the disk's boot sector. It's just a single byte.

5106. TT's and video cards FOR SALE - USA

Newsgroup: comp.sys.atari.st
Date: 1996-03-21 00:00:00 UTC
From: sirsmedley@delphi.com
Message-ID: <RpPolQH.sirsmedley@delphi.com>
Source record: 148726

FOR SALE - Two Atari TT030 computers

Both have:
4 megs ST RAM
TOS 3.06
720K floppy drives
modified parallel port driver hardware
(for longer transmission distance)

One machine is full US spec, and has a 60 meg hard drive.
The motherboard is revision H, for those who care.

The other is UK spec (UK ROMS & heyboard) with a US power supply.
It has a 120 meg hard drive. (I made sure this machine had the
larger hard drive to offset the minor inconveniance of the UK
keyboard.) The motherboard on this one is revision J.

Since both machines already have TOS 3.06, you only need an AJAX
chip to upgrade to 1.44 meg. (The drives are already 1.44!) I
never bothered to upgrade the floppy because I hardly ever use
floppies. BTW, Toad Computers has AJAX chips for $40.

PRICE - $450.00 each (including shipping in the "lower" 48 states)

I also have three AlberTT 1.2 video cards. They support one video
mode, 1024x768 with 16 colors, but it sure beats the TT medium
resolution of 640x480 with 16 colors! (You will need a monitor
that can support this resolution at a 48 Khz horizontal scan rate
to use this card.)

Price - $110.00 each (including shipping)

For one of the TT's and a video card, the price is $525.00,
including shipping.

Any questions? Contact me via e-mail at sirsmedley@delphi.com
or smedley@gte.net (I only check the Delphi address once or twice
a week, so for a faster response, write me at GTE.)

5107. Connecting a PC mouse to Atari ST

Newsgroup: comp.sys.atari.st
Date: 1996-03-21 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <4iqjqf$9ga@news.telebyte.net>
Source record: 148727

Enough people have asked that I've assembled some instructions for modifying a Microsoft Mouse (Bus Version Only!) to work with an Atari ST/STE/TT/Falcon. I have only tested this with the Microsoft Mouse II, but it should work with any mouse/trakball designed for a bus interface card on a PC. Included are general instructions for modifying the PC Bus mouse itself and for building an interface box which will allow any PC Bus mouse/trakball to be connected to an Atari ST/STE/TT/Falcon without further modification. Any particulars mentioned herein can easily be modified to fit whatever situation you may find yourself in - at least with respect to making a PC Bus mouse work on your Atari.

First, a NOTE: I am not in any way, shape or form responsible for any harm that may come to you, your computer, your mouse or other controller device, or anything whatsoever, through your use of the information contained in this file. While I believe all of the information to be accurate, I make no guarantees as to its accuracy and have no guarantee that you will perform everything in a safe manner or according the instructions provided. So you're on you're own here; however, it did work for me.

STUFF YOU MIGHT NEED FOR THIS PROJECT:

(items with "+" are for building the box)
(and may not be needed if you plan to)
(modify the bus device directly)

- Bus Mouse/Trakball + Electronics Project Box

+ Coffee, tea, soda, milk, water, beer, hard liquor, Everclear or whatever liquid refreshment/stimulant you feel necessary to continue

- Atari Mouse Cord (recommended) -OR- joystick cord with all 9 wires -OR- nine-wire conductor and DB-9 connector

- Solder & Soldering Iron + Hot Glue Gun & glue sticks

- Ohmmeter/Multimeter + Drill

- No. 1 Philips and Slot screwdrivers

+ Aspirin or Non-aspirin pain reliever (just in case)

ON WITH THE SHOW

Here are the pin and signal assignments for the PC Bus mouse and Atari mouse connectors:

```
Bus Mouse Signal Atari Mouse
--------- ------ -----------
1 Ground 8
2 Rt Btn 9 (Right Button)
3 -- -
4 -- -
5 LftBtn 6 (Left Button)
6 YA 3 (Vertical Cursor)
7 YB 4
8 XA 1 (Horizontal Cursor)
9 XB 2
10 +5v DC 7
```

Note that, as it pertains to this modification, pin 5 is not used on the Atari connector, pin 3 does not exist on the Bus connector, and pin 4 on the Bus connector is not used.

Looking in from the business end of the connectors (i.e., the part that normally plugs into the computer), the pins are labeled as follows for the purposes of this mod (this may or may not match any standard numbering conventions):

```
Bus Mouse Atari Mouse
--------- -----------

/-----\
--------- -------------
/ 4 2 1 \ \ 5 4 3 2 1 /
| 8 7 6 5 | \ 9 8 7 6 /
\ 10 9 / ---------
---------
```

Note the blank area at the top of the "Bus Mouse" figure. This is a "key" of sorts to prevent improper insertion of the plug, and is a handy way to differentiate between a Bus plug and a PS/2 plug, both of which are round. Another way to tell the two apart is the Bus configuration has ten places for pins, while the PS/2 configuration has only 6 pins. YOU MUST USE A BUS MOUSE/TRAKBALL FOR THIS PROJECT TO WORK. Serial, PS/2 and MousePort mice do not have the proper signals to work with the Atari mouse port.

BEFORE GETTING STARTED:

There's several ways this mod can be done, and you'll want to prepare for each a little differently. The first step, of course, to read over all the instructions carefully and make sure you understand them before proceeding.

Obviously, the mouse/trakball has to plug into the Atari. The best way to do this is to use the cord from an unused Atari mouse. The second best way is to use a DB-9 connector, which can be attached directly to the cord of the bus mouse, or to an un-used Atari mouse cord which can then be patched to the bus mouse. Note that the mouse cord MUST HAVE

ALL CONDUCTORS AVAILABLE with the exception of pin 5. Not all mice use the same number of conductors, and many have simply left the unused conductors out of the cord. You must use a cord which has the required conductors (1-4, 6-9) available for use. Joystick cables with the required conductors will also work, but are not as flexible as mouse cords; the same is true of most other cables you might make up yourself.

To simplify things later on, you might go ahead and determine which wire in the cable(s) are connected to which pins. Each wire should be a different color, which makes it easy to create a table listing each wire color and the pin it goes to. If the wires are all the same color, simply label each wire with a piece of tape and the number of the pin it connects with. You can get this information either by opening up the body of the PC Bus mouse and using an ohmmeter to trace continuity; checking things out visually, or by using a very small divining rod and immense faith in your ability to use it.

TO MODIFY THE BUS MOUSE/TRAKBALL DIRECTLY:

Using whatever 9-pin connector/cable combination you have chosen to use, simply connect the pins/wires from the Bus mouse connector to the Atari mouse connector as described in the chart at the beginning of this text.

If you will be cutting the connector off of the Bus mouse cord and replacing it with an Atari/DB-9 connector, make sure you have already generated a listing of what color wires go to what pins! Otherwise you'll be hard pressed to tell which wires go where and may never get it working right.

Once the connections have been made, check all of them and if all looks well, plug it in and give it a go. Make sure to check out all functions of the mouse (cursor up/down/left/right, left/right buttons). If it doesn't work properly, refer to TROUBLESHOOTING below for some tips. If it does work, congratualtions!

TO BUILD A BUS MOUSE/TRAKBALL INTERFACE

If you have an un-used IBM bus card handy, it can be used to construct a plug-in box which will allow the use of any other bus controller (i.e., mice, trakballs or pen mice) without having to perform further modifications to equipment. The Microsoft Bus mouse comes with an 8-bit ISA Bus card; if the PC Bus mouse you obtained did not come with a card and you do not have another, you might try obtaining just the 10-pin Bus jack from an electronics supply store or via mail order.

My box uses the card that came with the Microsoft Bus mouse. If one bends the metal bracket on the card parallel to each side of the circuit card and cuts the circuit card at the bracket ends, the resulting card will fit into most small electronics project boxes of about 2" x 2" x 3". I took the resulting card to a local Radio Shack and found a box

that would fit for under $3.00.

Place the card into the box and determine where to drill two holes: A big one for the PC Bus mouse to plug into the card, and a smaller one for the mouse cord which will plug into the Atari.

Once the holes are drilled, use an ohmmeter to determine where, on the "chopped" circuit board, the pins of the jack can be accessed. This allows for easier connecting of the Atari mouse cable to the circuit card. Ideally there should be a row of un-used solder pads on the top of the circuit board, near the jack, which can be used for this purpose. Keep good notes and/or label the solder pads so you know which ones lead to which pins on the bus jack. Also keep in mind that the pin numbers on the jack are mirrored left-to-right, as compared to looking at the bus connector on the mouse itself.

Thread the end of the cable which will be leading to the Atari connector through the small hole in the project box so that the plug is outside the box and the leads are accessable within the box. Tie a knot in the cable about three inches from the ends of the leads to prevent the cord from being pulled out from the plug end.

Solder the appropriate wires of the Atari cord to the solder pads on the circuit card which match the proper pins on the Bus connector. Before connecting the box to the Atari for testing, double check all connections my using an ohmmeter, making sure the PC Bus pin-to-Atari pin assignments are correct.

Test the box by plugging the Atari connector into the computer and the Bus mouse into the jack of the circuit card, making sure to test all functions (left/right/up/down cursor; left/right click). If there's a God in Heaven and all is right with the world, everything will function properly. If it doesn't, take a look at TROUBLESHOOTING below.

Once you've verified that all works well, place the ciruit board in the project box so the mouse connector lines up with the hole drilled for it and hot-glue the circuit board in place using plenty of glue along the edges of the metal bracket. Pull the mouse cord to the Atari connector so the knot in the cable is placed against the inside of the project box, making sure the leads to the ciruit board aren't being stressed, and hot glue that in place as well. Before securing the lid to the box, make sure that the PC Bus mouse easily plugs into the connector in the box. Then secure the lid to the box, and you're good to go!

You now have an interface that should let you plug any standard PC Bus mouse, trakball or cheese grater directly to the Atari without any further modification. In other words, you won't have to do this again and won't have the excuse again later, so you might as well sit back and have that beer now.

TROUBLESHOOTING

Those making an interface box will likely experience the most difficulty, as it is easy to lose track of where on the circuit board one can make a good connection with a particular pin on the connector. Being careful and meticulous and using a "paper brain" will help avoid problems later on.

The first thing to do, of course, is to check all connections to make sure the correct pins are connected to each other, and check each connection to make sure it is electrically secure and complete. If this fails, try using some of the tips below, which is basically the same advice in table form: ;)

Symptom	Probable Cause	Solution
Mouse cursor movement reversed (left moves to right, up moves down, etc.)	XA/XB or YA/YB signals reversed for horizontal, YA/YB to signals for vertical problems.	Reverse XA/XB signals
Mouse cursor movement really hosed up (left moves up, up moves right, etc.)	XA/XB and YA/YB signals connected to wrong pins PC Bus/Signal/Atari Mouse table	Ensure XA/XB and YA/YB connected to proper pins as per
Right or Left mouse button does not work. _or_ This can be checked by trying each button as if it were the other button.	Signals not connected are reversed. Check button signals; Check Lft Btn and the Rt Btn signals are not reversed.	Check pin-to-pin connections for mouse
Any given function does not work.	Signal not properly connected.	Electrically check the connection for that signal; Check pin-to-pin connections.
All else fails.	Did not try, or did try; did not try again.	Try again.

Set forth in electronic text for all posterity this 29th day of May, 1994, for the edification of the masses and to while away a few moments that would otherwise have made up a dull day,

Michael Parrott
mparrott@hebron.connected.com

Many thanks to everyone who's ever written anything whatsoever about modifying a bus mouse to work on an Atari computer, whether in textual or graphic format. I've tried not to draw directly from any other source for this file, but have surely been influenced by other information I've found on the subject, so thanks to those folk, whomever they may be,

are definitely in order. So there.

5108. TT video output question

Newsgroup: comp.sys.atari.st
Date: 1996-03-21 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <4iqk6h$9gj@news.telebyte.net>
Source record: 148728

Does anyone out there know of any hardware modification or software driver that will allow altering aspects of a stock TT030's video output? The problem I'm having is that the TT places the desktop to the far left side of my monitor's screen with a huge white gap on the right side. I've been able to tweak the monitor so the display is usable, but due to the desktop being far to one side, a 'pincushion' effect is unavoidable.

Ideally, what I'd like to do is get the TT to shift it's output toward the center of the monitor's display area to eliminate the distortion that seems inevitable at the extreme edges.

ANY info on a mod or software that might fix this is greatly appreciated!

My US Robotics 'Sportster' 14400 baud receives data at around 1600 cps and
sends (large files) up to 3000 cps, *without* the use of HSmodem!
Don't ask me how I've been able to do this, but I think it happened after I
messed around with the AT codes.
I'm using 'Connect' with the built in Zmodem protocol.

Are you sure this is a normal PC type mouse (serial)? I know that 'PC bus'
type mice are possible to use with ST computers if you rewire them, but I had
the impression that serial mice aren't compatible with the ST mouse port at
all....

(the only exception is if a PC mouse is plugged into the serial port and a
mouse-driver is used, but that's not of much use if you don't have more
than one serial port or don't mind sacrificing the one you might have-
which I can't as I use a modem).

: Magic 4 succesfully with this combo? Or do I need a new HD driver?
: Can I swap to another driver such as AHDI without reformating the HD?
: (I'm using BGM partitions.) Or do later versions of the ICD drivers work OK?

Hi,
I'm using HDDriver 4.6 with MagiC 4, because it supports the Background-DMA.
If your version of the ICD Driver supports the AHDI-compatible formatting (and
you used it) and if you have only up to 4 partitions on your hard drive, then
you can simply switch to another AHDI-compatible driver like HDDriver. I used
the ICD Driver (I think it was v6.2.3). There you can set the switch
'AHDI-compatible' to 'yes' and if you are using a maximum of 4 partitions per
hard drive you can switch the drivers (but keeping a backup of your hard drive
before doing this is although a good idea).

MP> software driver that will allow altering aspects of a stock
MP> TT030's video output? The problem I'm having is that the TT
MP> places the desktop to the far left side of my monitor's screen
MP> with a huge white gap on the right side.

I have not seen this. What monitor are you using, and in what
resolution? If it is a ptc1426, you have a more-or-less serious
hardware problem. If it's a pc monitor, you'll have to tell us the
specs (and then *I* won't be able to help you, except to suggest a
Nova card or similar).

BTW, thanks for the pcmouse article!

>Are 100Mb drives still *made*? At regular intervals, disk capacity doubles, but
>you pay exactly the same amount. 500Mb - 1Gb drives are dirt cheap nowadays. Go
>for one.

I also doubt that 100MB drives are still made. The only reason I was wondering about the LPS 105S is that I already have one that I am not using. I have since tried this disk on my Mega STE without success. I disabled parity and also tried removing termination (the original ST157N had termination removed). AHDI refused to see the drive at all.

I noticed 3 DIP switches on the Mega STE SCSI controller. Are these to set the drive ID? Are the ID jumper on the disk required to be set to a particular setting independent of the controller settings. I asume the controller only supports one SCSI device, is this correct?

If I recall correctly there are similar DIP switches on the MegaFile 30. I seem to remeber changing these to use the drive in addition to the Mega STE internal disk, but can't recall what they did.

Also, I was wondering what the 8 DIP switches on the system board are 4. I know 7 is for enabling an HD floppy drive, but have no idea what the others are for.

Once again, any help would be greatly appreciated.

Thanks,
Chris

5120. FS: Mega ST System inc SLM805 (SF bay area)

Newsgroup: comp.sys.atari.st
Date: 1996-03-21 00:00:00 UTC

Message-ID: <4isk2v$69@news.Silvaco.COM>
Source record: 148740
Cross-posted to: comp.sys.atari.st,ba.market.computers,misc.forsale.computers.other

Folks,

It is time to clear some space in my bedroom I have a very nice
Atari system for sale, make a good basic Music or DTP system.

CPU: Atari MegaST2 expanded to 4Meg. Upgraded to TOS 1.4.
Hard Drive: Internal 105 Meg HD with SCSI out for other devices.
Floppys: Internal DS/DD floppy drive
External DS/DD with track counter
Printers: Atari SLM805 laser printer 8pp drum resently replaced
includes spare toner cartridge
also an epson FX85 dot matrix
Monitors: Atari SC1224 color monitor
Atari SM124 mono monitor
Monitor sitch box
Other: Spectre GCR includes ROMS, MacOS Disks and manuals
Cordless mouse
Standard Atari mouse
Standard Mega ST keyboard
Software: Calamus SL
Atari works
Word perfect
many more.

Price: $699 plus shipping. (the SLM804 is worth alot of that)

I would prefer to sell locally in the SF bay area, will consider
delivering as far as SF or Berkley.

I would also prefer to sell the thing as a whole system. But will take
offers on individual parts.

If you want them I can also through in 3 extra 105Meg hard drives for
free. These work just fine but are bare drives (no case or PSU).

I wouldn't recommend buying any Offline Internet Directory. IMHO this sort
of book is just a way to make money on the current internet hype. You'll
probably find out that using an online automated search engine like
Yahoo! or InfoSeek will save you $25 and find everything you need.

I usually use SavvySearch which is an integrated search engine that uses
several different specialized ones. And generally if you don't find what you
want in there, it doesn't exist.

I have in fact done this - I have it on my TT at home although I don't really use X too much any more (since I'm no longer in school). Xfig requieres a hell of a lot of resources (it was even shaky on my TT with 12 Megs of ram.) If you really need Xfig - I can send you the binary but if it's just for using Latex stuff - go with postscript - that's what I did when I was in school. A good vector program on the Atari (like Kandinsky) is better than Xfig anyway.

>Another possibility is to use another format and convert it whith any

5135. When is the New MagiCMac due out?

Newsgroup: comp.sys.atari.st
Date: 1996-03-22 00:00:00 UTC
From: zan660@usa.pipeline.com
Message-ID: <4ite1c$3no@news1.h1.usa.pipeline.com>
Source record: 148455

MagiCMac needs some work, the biggest problem is that it hogs RAM, I ghave a PowerBook 520c (25mhz040, 8RAM, etc) and in MagiCMac I only have 3 and a half megs left, even though I give it 6 megs.
Scrolling speeds in many cases are slower then Mac applications and other features are left out, for example the find comand does not work.
Any news on when it is due, I am getting NVDI 4 soon?
Email me,
Zan

5136. A universal ST FTP-index!

```
Hi!

I'm setting up a universal FTP-index covering all the FTP-sites that
support Atari ST software! A very-Very-VERY-V-E-R-Y poor "beta-version"
of the index is already available at:

http://www.uku.fi/~hovila

Take a look at it if you want to... I'll send a note to
comp.sys.atari.st when the universal index is completed!

From: Brendan McEnroe <mcenroeb@syntegra.bt.co.uk>
Message-ID: <3153164F.6CFD@syntegra.bt.co.uk>
Source record: 148457

midi out can be connected to the modem port to give you an extra 16 channels.

I read some where that some body had hacked one of the boards that gives you 4 midi outs and 2 midi in's and built one himself.

Does anybody have any info on building such a board

Thanks

Bren

>kind of stuff.

Hmm. I don't know if Secret of Monkey Island fits into that category of game,
but I do seem to recall that it runs in mono. Probably hard to find now, since
US GOLD long dropped the ST.

Other than that I can only think of the Ishar series. Once again, I'm not certain
as to whether they fit into that genre.

>Now, I go for URL's & *every time* get a 'read error on
>j:\www\cab\html\00000001.htm' message.

To get rid of this error, try deleting the DOMAIN.TXT-file in your STIK_CFG-folder (or rename it, if you like to keep the contents). If you take a look at Domain.txt, you'll see that STiK (or is it CAB?) is using this file as a mental notebook: it stores the names and other info of the web-sites that you visit. I found out that the entries are linked with the entries in the CACHE. The first entry in Domain.txt is related tot 00000001.htm. In other words: clearing the CACHE is not enough. You'll have to clean Domain.txt as well, to make a fresh start.

regards,

Marc_Laan_Amsterdam_Netherlands.

5146. Falcon Hard Drive

Newsgroup: comp.sys.atari.st
Date: 1996-03-22 00:00:00 UTC
From: Paul.Muehlbauer@flight.org
Message-ID: <903_9603220106@flight.org>
Source record: 148466

Howdy. I just bought a used Falcon. It was shipped to me, & maybe not packed that well. I've got 7 days to keep it or return it. It works great except for a glitch with the hard drive. It has a Maxtor 25252 AT IDE ~250meg drive. Here's the problem:

One of the folders had 'flakey' files in it (happened to be Neodesk which was trying to autoboot from the *.INF file). After a dozen boots (more or less sucessful), it would error out ("Your output device is not receiving data") & lock up. I used ICD Pro to boot it from floppy, and ran Edge on the drive. It's all one partition, & Edge returned an error: DOS error #-1 Reading DIR Scectors Location 6723. I had Edge clean up the errors, & it deleted the whole Neodesk folder, & found 10 files of lost clusters. It boots fine off the hard drive on it's own now. The 10th file of lost clusters must have the bad directory sector incorporated into it, as that file can't be read. Everything else seems to work ok.

This hard drive seems to start & stop itself, and makes a light clucking noise as if you lightly drop a ball bearing as it spins down. It does this quite often. I assume this is quite normal, & just a typical 'notebook' drive saving power, right?

Anyhow, my question is, does it sound like everything is ok, & the worst I need to do is reformat the drive to take care of the bad sector? Or, might I have picked up worse problems in the shipping? Thanks for any advise.

Hi,

that's right. With MagicMac you an almost all Atari software on every Mac and
that even faster than on a Atari.

The problem is, that the Mac doesn't offer the same hardware ports (MIDI,
rallel port etc.) and the software has to be strictly GEM conform.

Now a) most games are not completely GEM, therefore almost no games work under
MagicMac and b) you don't have a MIDI port, unless....

You buy an expansion port which is available from Germany, which gives you
all the Atari hardware ports you need (including Midi). Problem is, that this
port (as far as I know) is not available for newer PCI Macs.

I did an experiment. Poured a teaspoon of water on a HP660C sample and an Epson Stylus IIs sample (both from store). Came back in an hour. The 660C had run and bleed all over (ruined). The Epson was perfect, paper a little wrinkled, but the ink didn't run and was still bright! I am sold! I am, however, a little bothered that I can't find the old Color or the ColorII, only the IIs. Still need to look around. Didn't know that the IIs could only hold one cartridge. Thanks. I was told that the original Color is the very best of the lot. I also get good reports on the ColorII.

>
> Is HD Driver worth owning?

I'm a 1000 messages behind but I'll still answer this.

I've been a great ICD fan for about 5 years. However the main failing for me was that I had to use AHDI to boot Linux/68. I picked up a 2nd hand copy of Outside - which happened to include an old (2.8?) version of HDDRIVER. This I installed - and it solved my Linux/68 booting problems.

However it also improved the speed of my disk access considerably - even over ICD. Therefore I've just left it installed.

IMHO HD Driver is worth owning - but don't chuck away you ICD tools just yet. Also if you are using ICD and are unsure if you might want to change in the future - then make sure you use AHDI compatible formating/partioning next time you redo your drives. It allows you then to swap back and forth between driver software if needed.

:-)

Roland.

Hi Tony

In article <827078164_OASIS_@swoon.demon.co.uk>
tone@swoon.demon.co.uk (Tony Gilbert) said:-

>Can someone tell me about the Mailshot in Oasis. Can you just send
>Mailshot E-mail or can you send Mailshot newsmail as well?
>And what can be specified in the .MSH file ?

I'm no expert but here's my experiences of the above.

When you want to send an e-mail mailshot to some of your mates, then what you have to do first is go into Yellow Pages, add your mate's address, then select one of the boxes (A-P), okay it, then move onto another mate and go through the same procedure, again selecting the box which has to be the same as the previous mate. When all your mates are added in this way, all you have to do is go to Mailshot in Postbox menu, select the box that applies to your mates, click on send, fill in the regards to line, then edit your letter to your mates in the usual way and exit as normal. Then you will see a box which flashes through all your mates addresses and finally exits. Then if you check your Internet menu you will see that the first mate in your list has his address listed. None of your other mates will be listed, but don't worry, the commands for sending this mailshot are held in another file, and all being well when you next log on, you will see all your mates addresses appear on screen and your e-mails to all of them will go as normal.

As for the news side of things, well what you do if you want to post a message to two or more groups is go to one of the groups that you want your message to appear in, select post message, a box will show you your current newsgroup, then click on more and you will be able to add any further newsgroups where you want your message to appear. Finally okay everything and edit and exit as normal.

Again, in your Internet menu listing, things may not appear to be quite right, but upon log-on you should see your newsgroup messages get posted to the right areas.

I have used the above two facilities and they do work, but you're right to be a bit confused because the Oasis help file isn't exactly clear about any of this. I just did a bit of experimenting and found out how to do it, although my method of describing how it is done is perhaps not clear enough. But I am sure others will be able to clarify things if needed.

Hope the above helps in some way.

From: coconut@coconut.demon.co.uk
Message-ID: <827593002_OASIS_@coconut.demon.co.uk>
Source record: 148475

Some bad news regarding Atari World.

A friend on CiX e-mailed me this morning (Friday) to say that Andrew Wright, the editor of AW, had informally announced that production of AW12 had been SUSPENDED.

I called Specialist Magazines, the publishers, but only got a standard 'Call back later or leave a short message' recorded announcement. I left my name and number and asked for a response since I am a subscriber, and want to know what's happening with my subscription money. At the time of posting this message, I have not heard anything.

I know nothing more, but perhaps someone else does?

If AW stops publishing, then it may be time for me to activate my Atari Magazine publishing plan :-)

Hi again!
I guess that earlier reply was kind of unreadable! What
i meant to say is that i've used the combination of a TT
and cubase for almost 3 years now and i'm very happy with
it. The only flaw is that Cubase and TT-ram doesnt like
each other very much, i've never got it to work good using
TT-ram. On the other hand, as Steinberg stopped their
development on the Atari line in May-95, i'd personally
go for a Mac or a PC instead of the TT, despite beeing
a wonderful machine, it's becoming history.

Is there a sound player which would allow me to drag and drop WAV files onto it using my STe? If so, where might I find it? I've tried one or two likely looking programs but have failed to get anything up and running using files grabbed from the internet.

Andrew

Source record: 148484

Jared,
Pirates! runs fine on a Falcon using the PD version of Backwards.
I know of a few places in the States that stock it. The Computer
Dungeon has it for $6, for example. To my knowledge, they have
no e-mail address but here is their phone number and mailing address:
Computer Dungeon
1440 Spencer Ave.
Berkeley, IL 60163
Phone: (708) 547-7085
Fax: (708) 547-6550
Hope this helps and Pirates! is a very good game.
-scott tirrell

It's the best affordable line art programme on TOS computers and probably
the best shareware/keyware programme there is on Ataris.

I am looking for the best screen shot of your computer, in short I want to see how other people set up their computers: desktop picture, icons, etc. I am a MagiCMac user and have been held back from fully customizing EASE.

Pleasesend your screen shot to me in anything but base 64, UUencoded is the best.
Thanks
Zan

5170. Atari World - Alas he is no more

Newsgroup: comp.sys.atari.st
Date: 1996-03-22 00:00:00 UTC
From: mbge4mdc@meehpb01.ee.man.ac.uk
Message-ID: <4iuii1$j1h@yama.mcc.ac.uk>
Source record: 148490

Since most of you probably don't know, Atari World (and, I believe Compo) have been liquidated. I din't think it's a big secret, but since no-one else has mentioned it here I hope I haven't broken any laws (or jeopardised my chances of getting _any_ of the money they owe me for my article).

Unless someone takes it over (System Solutions?) all the recent flames about STF vs AW were in vain. I for one sincerely hope it gets revived somehow, since it was a damned good read.

Anyway, the main point of this post is to let anyone who's interested know that my web pages now contain a whole host of links relating to my article on operating systems in the last issue - links for Linux, oAESis, NetBSD, etc. - as well as ones about MagiCMac, STonX, etc. I had hoped to broadcast this fact in the next issue, but.....

Anyway, if anyone wants to know more about alternative OS's for the Atari, my pages might be a good place to start. There's also a bit of other general Atari stuff, too, plus a selection of other goodies.

Cheers,

Xav

cggiles@bradford.ac.uk (Chris Giles) said:-

>I have about 10Mb of 1stWord Plus files on my Atari 520STFM floppies
>(no HDD on my Atari) and I want to move the data to my 386 PC. Then I
>want to word process it with AmiPro or Word or Works (all Windows
>versions). Can anyone tell me how to do it, please?
>
>I have a utility for the Atari, 'Blueboot', which rewrites the FAT on
>an Atari-formatted disk so that an IBM can read it. Unfortunately, it
>can only do it with blank disks - I lose all the data if I do it to a
>full one. Okay, I could get a bunch of new disks and copy all the
>files, but I only have the one disk drive and the first version of
>TOS, so you can imagine the number of disk swaps - we're talking
>several hundred separate files to copy!

I've not heard of this utility. Typically, a disk formatted to 720K by
a PC can be read and written by an Atari. This is not much help to you
but it does mean that only the bootsector needs modifying. I believe
there might be a utility for the PC which does this, there certainly
are for the Atari.

If you are handy with a disk sector editor then format a 720K disk on
the ST and one on the PC, compare the boot sectors - there is very
little difference and the modification could be done manually.

>Does anyone have a utility which will rewrite the Atari disk FAT so
>that it can be read by a PC, without scrambling the data?

>Or could I somehow link my ST direcly to my PC with a cable and sent the
>files straight to the PC HDD? I don't have any software for this on my
>Atari.

Ghostlink connects the two machines via the serial ports.

>Then there's the problem of getting the PC WPs to handle my IstWord+ files.
>I'm desperate not to have to change them to ASCII and thereby lose all my
>formatting. Is there a software converter available?

There are utilities to export RTF format, the Marcel word processor
understands 1stWord and can do this. The PC software probably has an
RTF import. This effectively answers your question. You are going to
have to load in every single file into some utility and export it in
RTF. You might as well format a PC 720K disk and export to that
whereupon the file will be directly readable on the PC.

From: bbeck@lilfort.mlnet.com
Message-ID: <GCWPFCAFUP@lilfort.mlnet.com>
Source record: 148501

I remember reading a thread last year about stiction and the Quantum 105 drive but can't remember if there was a remedy for it. I think I have that problem.

I have 2 drives, a Quantum LP105S and a Seagate ST157N, daisy chained together. When I turn them on the Seagate will initialise but the Quantum won't. I have to turn the power off and on 3 or 4 times before the Quantum will initialise. Does anyone know if stiction is the problem or if it might be something else?

There is a program called Ghostscript that allows Postscript files to be printed on an Atari ST or Falcon. I've used it myself recently to print out tax forms.You should be able to find it at one of the net archive sites. I believe it might be filed under GNU.

This is a very strange beast. To get it to work properly, I have to run it
under NVDI, otherwise it reacts very oddly to keypresses and mouse movements.
Even then, when the program is finished, I have to reboot the machine, or I
get all the problems I would have had if wasn't running NVDI.

Does anyone know why NetHack acts like this?

5188. New CAB error!

Newsgroup: comp.sys.atari.st
Date: 1996-03-22 00:00:00 UTC
From: Michael_Depke@b.maus.de
Message-ID: <199603222020.a53096@b.maus.de>
Source record: 148558

Hi Mark!

MW>*every time* get a 'read error on j:\www\cab\html\00000001.htm'
MW>message.

Here is a message I found:

----------schnipp----------
Thomas_Grunwald@du3.maus.de wrote in ATARI.SOFT, Topic:'CAB: Tip`

Die ominï¿½se Fehlermeldung "Kann die Datei 00000001.htm nicht laden" (o.ï¿½.)
ist bei mir verschwunden, seit ich den Internetcache auf lediglich _1 MB_
Grï¿½ï¿½e eingestellt habe (auï¿½erdem 1 MB "freihalten"). Ich glaube, CABs
Cacheverwaltung hat Probleme mit grï¿½ï¿½eren Einstellungen.
----------schnipp----------

I'll try to translate:

The error-message 'read error on j:\www\cab\html\00000001.htm' disappeared,
when he decreased CABs internet-cache (you find this at /Options - Cache.../)
to 1MB. Same with 'keep free'. He thinks, CAB has problems with bigger caches.

Hope that helps.

Gaven Miller asked of me privately:

G > "Maalox"?

Oops, sorry. Maalox is a brand name for milk of magnesia with some other stuff for upset stomach. I infer from your question that it is not sold in nz. We Americanos are a provincial lot, and forget that our commercial empire is not worldwide. I chose to respond to his question publicly since 1) others may not know what Maalox is; and 2) my email may still be messed up.

>
>So the person selling the goods may loose potential buyers from other
>countries who have read the "USA" in the subject line and think the goods are
>US only. :(
>
>ATB.../|\L ~:-)
>
The solution is simple....

If the buyer lives in the US and is willing to send/sell/buy abroad
then he simply puts as his country code (US)+

this simple means he lives in the US (the (US) but), but will consider sending
abroad (the + bit).

Any user looking only for say, UK products can search for (UK), or if
they don't mind stuff from abroad, will also consider, anything with a
+ tagged on.

BTW: when will this marketplace newsgroup be available ??? it seems to
have been a long time since it was first annonuced, and still there
are too many adverts for sales/buys/swaps on this newsgroup !

Source record: 148561

At the moment I have a TOS2.05 MegaSTE with an internal Seagate ST157N 48Meg HDD. I am sort of considering upgrading this but I would really like to know where I stand:

1) is this a standard SCSI 3.5" drive ???
2) does it matter that the drive bought is SCSI or SCSI2 ???
3) I've heard about parity, will this be problem, and how can I change it ??? I have no access to software other than AHDI, and no PCs
4) Also BUS Arbitration, does this affect me ???
5) Is it just a simple job of unplugging the old drive and plugging in the new 'bare' drive ??
6) I've heard a lot about bad sectors on new large drives, can I really expect these ? and if so how many, and how fast do they spread ??? (Nb. can I expect a 50%bad sectored drive after 6 months ?).

Can anyone recommend a particular drive type that they know will work with the above setup, with the minimum of fuss ???

BTW: some of the drives I've been looking at: Quantum Fireball 1.08Gb, Fujitsu M1606SA, 1Gb, Seagate ST3123aN, 1Gb, Conner CFP1080S, 1Gb

Any comments ???

This ones gonna sound like me being way too lazy, but:

Can someone tell me when there is a DoomClone, that loads the doom
standard WAD and PWAD files, for the falcon, that runs in nice
ammounts of detail and colour with all the texture mapping and stuff,
at >12.5fps on a standard falcon ???

I did get Badmood ~1.8/1.9, but it seems to run at about only 2-5fps,
which is a bit slow !! I di join the mailing list for Badmood, but
ended up in one week with abotu 150emails !!! far too many to cope
with !!!

Any suggestions ??

LDW has a conversion utility program called LDW CONVERT which changes your LDW file into a Lotus version 2.01 file. If you really want to get the data to Atari Works you can do what I have done...Use the Lotus Translate Utility that comes with Lotus 123 to convert the Lotus wk1 file into a dbase data file. You can then import the dbase file as an Atari Works dbase file (but not spreadsheet yet). If it is an AW spreadsheet file you are striving for you can copy cells in your AW database to an AW spreadsheet. A little tinkering and you are done!

: Are there Pagestream drivers for these printers?

: I thought about getting either an Epson Stylus2 or HP660C, but I didn't
: know if they came with both black and color cartridges installed. Also,
: whether or not they used the black when printing color instead of mixing
: all the colors together to get black.

To the best of my recollection, there is a DJ660C driver. I have
an Epson Stylus, but I would think that that the printer driver I use
would work for a Stylus II (probably the IIs would use the various colour
jets to simulate black if you didn't have the black cartridge installed,
but the Stylus II can hold both cartridges, so it would use the black
cartridge for black, and the colour cartridge for colour portions of your
document. I can't recommend the Epson Stylus highly enough, by the way!)

I'm using a Quantum LPS 105S internally in my Mega ST2, with an ICD
microSCSI adaptor, and it runs just fine. Just popped it in, disabled
parity with the jumper and off it ran.
Take care.

>hardware problem. If it's a pc monitor, you'll have to tell us the
>specs (and then *I* won't be able to help you, except to suggest a
>Nova card or similar).

It's not a PTC 1426, but rather a CTX CMS-1561 Multiscan. I got it from the same folks I purchased the TT from, Toad Computers. When I called them about the situation nigh on two years ago, they said it's fairly common and may vary from TT to TT. I was a little miffed about hearing of this _after_ the fact, as I might have opted for the Atari monitor which they told me is designed to compensate for it.

As I said, I've tweaked the monitor to get a close-to-full-screen display by going inside and tweaking the display, shifting all the way to the right (to cover the large blank area on the right) and enlarging the displayed image a bit. But since these are analog controls, a noticable amount of pincushion distortion is still present.

If a hardware fix for the TT is available, I'm assuming it would alter the timing of the horizontal sync so as to shift the image to the left or right. But I'm not _that_ much of a hardware guru, so I'm just guessing on that.

What I am really hoping to find is that the TT's video circuitry is, in some small way, software programmable - at least to a degree that would allow such a fix to be written. I know that more colors and greater resolution are only possible with a graphics card, but maybe image placement _could_ be altered, and no one's ever thought to look into it...?

I'll remain hopefull...

>BTW, thanks for the pcmouse article!

Hello Jyri-Pekka...

j> Are there any (preferably good) RPGs for the ST that run on high
j> resolution? I'm looking for something like Ultima 5, AD&D-series and
j> that kind of stuff.

IIRC all three games in the Ishar series run in high resolution. The Ishar
games are noted as being the BEST RPG's on the ST anyway... so you should
seriously think about getting one of them.
```

It just so happens that I am selling Ishar 3 at the moment for £15 (UK Pounds).... but I can't confirm 100% that it runs in high resolution. Anyone? :|

>Please email me,
>Zan

No version of Unix is GEM compliant since Unix is a totally separate OS
from TOS/GEM. I know that the Linux for the Atari is exactly the
same as the Amiga and Mac version. You should stick with the Mac version
of Linux. It should support '40s and there is also supposed to
be a PowerPC version of Linux

Hope this helps.

: at >12.5fps on a standard falcon ???

If you run version 2.05a (IWAD only, try the 14meg registered Doom][
one!) on a TV or RGB screen, and then halve the x and y detail (gives
effective resolution of 160 by 100, same as Jag Doom?) you will see a
pretty damn fast 3d world that looks better than the original PC version.
Very seldom have I seen less than 10fps on my falcon. I do have PowerUp2,
but you will only be 12-15% slower than that...Give it some cred huh? I
does LOOK awesome after all!!...

>I'm right isn't it?
>It is really a damned good magazine.

Since my original posting on Friday, I have got some more info about Atari World. The publishers have apparently been put into receivership, and that is more or less it. Issue 12's artwork was all done, and it could be printed tomorrow if anyone had the dosh to do it!

System Solutions, or rather Karl Brandt, is interested in buying the magazine off the receivers, and is looking for people to sort of purchase the magazine in future like a shareware-type affair!

But, he appears to be thinking of publishing the magazine on a bi-monthly basis, which would make economic sense, even if it is not exactly a viable way of keeping the magazine up-to-date with the news from the Atari scene.

I too thought it was a bad dream, but I'm sorry to say that when I woke up this morning, the situation was all too real :-(

Guess there's always STF ;-)

>Do I have to change the jumpers in a Megafile 20 if I want to use
>another drive unit?

If you want to add a second entire Atari drive to the device chain, you have to flip the middle one of the three-DIP-switch row in one of them (the one that is to become the second unit). This makes the drive respond to Unit #1 instead of #0.

If you want to replace the drive mechanics inside the Megafile with a different MFM drive, you don't have to change anything in hardware.

If you want to add a second MFM drive mech to the controller you have, you need extra cabling and special driver software.

The problem is: The TT issues its visible image at 32 MHz, where a PC VGA does only 25 MHz. So the visible part of the TT's image is "done" earlier on the CRT beam's way to the right end of the tube, leaving the rest in margin color, which normally is white.

The TT monitors PTC1435 and PTC 1426 had a hardware switch changing the picture width from "normal/VGA" to "TT". The latter was just what you did to your monitor internally - set the beam scan width H-WIDTH to "ridiculously large" so that the TT's visible screen area fills the CRT area, and the large white margin is way beyond the CRT to the right.

> What I am really hoping to find is that the TT's video circuitry is, in

>it...?

The TT's video unit is not at all software programmable.

What you can do is get OverScan TT. This is a hardware modification that enlarges the visible screen area to 832x496 pixels (keeping all timings as they were) and thus uses the entire tube of standard VGA monitors.

bye, Peter

>crazy... I've got HS-Modem 6.0.

HSModem is just a set of efficient drivers that use less computational power and bring fewer bugs than the original drivers in TOS. For higher hardware speed you need these PLUS a hardware modification giving the MFP chip a higher clock rate.

bye, Peter

g> they would like to transfer the data to a PC somehow.
g> Unfortunately, floppies written by an Atari seem not to be readable.
g> Is there any known procedure to transfer data as described?

Format the floppy on the PC. MS-DOS is EXTREMELY stupid - if 4 particular bytes in the boot sector don't match what it expects, then it reports the disk to be blank. TOS doesn't (until version 2.05, I believe) write anything special to those bytes, so the PC can't read the disks. However, the data is all there, and perfectly readable; it only those missing 4 bytes. There are utilities to fix this on ST-formatted floppies, but all in all, it's usually simpler to use what's at hand - the PC.

mdw> Has anyone looked into being able to transform a Glidepoint for use
mdw> with the Atari?? (This is a device which has no moving parts other
than
mdw> your finger to move the mouse cursor.)

If you're going to spend US$60 or more for a Glidepoint, spend another
US$90 and get the Keyboard Gizmo. It will let you plug in _any_ serial
mouse device _and_ a PC keyboard to your ST.

Alternately, if you don't need the Atari serial port (I do, obviously),
there is software to run a serial mouse on the ST/STe.

5234. NOS with NNTP passwords?

Newsgroup: comp.sys.atari.st
Date: 1996-03-23 00:00:00 UTC
From: csh@falcon.sdi.agate.net
Message-ID: <827626154_OASIS_@falcon.sdi.agate.net>
Source record: 148575
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello out there--

Does anybody know if NOS works with news servers that require a username
and password in order to gain access?

The news server I use now sucks, and it'd be nice to be able to subscribe
to one of those servers where they keep articles forever and have every
newsgroup. But they require passwords, and I don't know if NOS will be
able to cope with that.

Thanks in advance for any help...

5235. **-How good is the Falcon 030-**

Newsgroup: comp.sys.atari.st
Date: 1996-03-23 00:00:00 UTC
From: afn14016@freenet.ufl.edu
Message-ID: <4ivtl0$m35@huron.eel.ufl.edu>
Source record: 148576

How good is the Falcon 030?

I feel that a computer is as good as the software it can run.
The Falcon 030 can run Logic Audio and Cubase Audio. These are very
professional Digital Multitrack Direct to Disk recorders/editors.
When I say Digital Audio I do not mean MIDI, but CD quality
multitrack audio.

This on other plataforms while possible require very expensive
audio cards. I have a friend that just got a Pentium and SAW digital
recording program. He paid about $3000.00 for his set up!

I am very happy about my Falcon and I very happy to hear about Expose
realtime true color motion video digitiser and Apex Media.
Also I just read on the March issue of ST Format about an available
40mHz card and another coming soon that will get your Falcon to
80mHz!

To me the Falcon 030 is a great computer that will get better and
better with the coming new programs and cards. I write this to
encorage Atari users to upgrade to a Falcon 030. I am sure it is a
good choice.

You can expand it with:

external SCSI CD ROMs
Expose digitiser
External SCSI drives
External standard Modems
SVGA monitors
cards foe extra speed etc.
I hope this will be of help to all who still use 1040 STs.

5236. Falcon Probs & Mods

Newsgroup: comp.sys.atari.st
Date: 1996-03-23 00:00:00 UTC
From: mike@coconut.demon.co.uk
Message-ID: <827627074_OASIS_@coconut.demon.co.uk>
Source record: 148577

Hi All

I've just landed myself a beauty of a Falcon.

Only problem is that none of the audio mods have been done to it (vital for what I want to do) and I also understand that there are problems with the SCSI transfer.

Therefore, is there any Falcon expert reading this message that can give me a detailed description of the various problems and a very detailed description of their fixes?

I have an expert computer person on hand to do the fixes, he just needs the info to know what to look for and do.

If you can help me, I will be eternally grateful.

You can post responses to this newsgroup, but to avoid boring everyone to death, it might be better if you can e-mail me at:

mike@coconut.demon.co.uk

Thanks in advance to anyone that can help me with this.

Message-ID: <827628722_OASIS_@awinc.com>
Source record: 148580

The two ports on the side of the STE are for a game controller that became the Jaguar joypad controller. A lot of the newer games allow you to use a joypad controller which can be more fun than the traditional joystick controller.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Summary:
Keywords:

A quick mega guestion! Sometimes I feel like a newebie asking these
stupid questions, but I've only utilised this machine as a cubase/Dr T's
engine for far too long (I bought my original St some 10 years ago).
My question for all you knowledgable users:
I'm still experiencing problems with FZDT and I can't but wonder why.
I'm using a mega 2 and have the tos fix (1.4) installed. I dl-ed a abunch
of patches for this version of TOS. supposedly, the rainbow patch will
cure al problems, but....
Should I install the the High Speed Modem patches as well? will they
interfere with the operation of the TOS fix?
any suggestions will be much appreciated!

Lottery Companion 3.5 is now released.

Get your copy from Floppy shop, LAPD or Goodmans, or Email me for a UUE version
or take a look at the Lottery Web site shown below.

Also available via all-at-sea BBS and others.

Perms and Hot Keys added.

Many other improvements too numerous to mention - so why not take a look ?

Hope you like it.

All the best.

In article <827506032_OASIS_@mbha.demon.co.uk>
daveb@mbha.demon.co.uk (Dave B) said:-

>Who else has been losing mail/posts? I have a new newsgroup started on
>March 1st. Approx 605f all posts have been lost by Demon. [read 60%]
[snip]
>I have sent posts to other groups. I sent 9 yesterday. None have arrived.
>That's a 1005ss. [read 100%]

I also lose many articles in international groups, and even more in
specific groups like demon.ip.support.atari or the fr.* hierarchy, I think
I recieve only 10 percent of the traffic... I also sometimes lose my own
articles, they don't appear on the newsserver (but seem to be forwarded).
But all this not at demon, but at compuserve newsserver...

Sometimes I think it could be software fault (NOS) but no, I got a
full feed when I polled the news.zippo.com public newsserver (it's no
longer public AFAIK).

I have nothing against Phil as I know nothing about him apart from
Oasis . As to Oasis it does what it is supposed to do which is an
off-line newsreader and it sends and receives mail . The last time I
looked wasn't this comp.sys.atari.st well that is what I own and I see
No reason to look to any other group . Boy you people in Europe sure
are a touchy lot compared to us in North America . You do know that
there is other software for internet like Stick/Cab , Mintnet ... So
you see there is life after Oasis that I utilize on a daily basis with
a GUI to be able to see all of the net web pages . Experiment a little
and install these other programs and then come back and tell me what
is missing in Oasis and then we will see if we both agree or disagree

The programmer (Arto Jalkanen) is also a damn fine guy. Find him on #Atari
on IRC & tell him how much you like his program.

:
: You do??!!! I haven't done any text for a while, but I am d**n sure
: that I never got 6000cps - my eyeballs would have dropped on the
: floor! You did say 14.4 in your message, which is what I have. Most
: people here have reported approx. 1800cps, which is what I remember.
: Tell me more.

You read correctly. Thats the best I've ever had, although 3000 or so is more common. You must realize that generally the files that xfer at that cps are very loosely typed ASCII text. If you're keen to see the cps rate on your comms program go bonkers like that, try the index file from umich. That is the one that gave me 6000 cps (5982 to be precise, looking at my CoNnect log file)...

>like to know where I stand:
>
>1) is this a standard SCSI 3.5" drive ???

Not sure but certainly no bigger than a half-height 3.5" one.

>2) does it matter that the drive bought is SCSI or SCSI2 ???

Nope.

>3) I've heard about parity, will this be problem, and how can I
>change it ??? I have no access to software other than AHDI, and no PCs

Parity is only a problem if our controller does not support it and i'm
not sure about the built in one, most drives have a small jumper that
you can pluck from the bottom of the drive to disable parity, very few
need software.

>4) Also BUS Arbitration, does this affect me ???

It's not a problem unless you get something like a Fireball and if you
get HD Driver you can get full advantage of it.

>5) Is it just a simple job of unplugging the old drive and plugging in
>the new 'bare' drive ??

Yeah!

>6) I've heard a lot about bad sectors on new large drives, can I
>really expect these ? and if so how many, and how fast do they spread
>??? (Nb. can I expect a 50%bad sectored drive after 6 months ?).

I've neither heared of nor experienced these problems and I havd a
brand new Quantum 170meg drive for 3 years and a 540meg one for about
6 month and no problems whatsoever but GET DIAMOND EDGE, you must,
anyone with a hard drive should have it!!!!

>Can anyone recommend a particular drive type that they know will work
>with the above setup, with the minimum of fuss ???

>BTW: some of the drives I've been looking at: Quantum Fireball 1.08Gb,
>Fujitsu M1606SA, 1Gb, Seagate ST3123aN, 1Gb, Conner CFP1080S, 1Gb

Those should be OK but I think it was a fireball that I was sent that doesn't like computers without bus arbitration (it might have been a lightning but I'm not sure.)

One thing though, if you've manged with a 48meg meg HD are you sure that you really want one 20 times bigger? My 540 is barely half full (but then again I do also have 20 Zip disks <g>), seriously just think about how much space you want and get about 30-50% more.

5265. a nice faeture for Oasis2/Ice

Newsgroup: comp.sys.atari.st
Date: 1996-03-24 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <827747634_OASIS_@phil4.demon.co.uk>
Source record: 148356

I was sitting thinking just about something that slightly annoys me about Oasis/NOs and was hoping they would fix in the new version.

At the moment I only log on to get mail and news at the weekend, to save on phone bills !!! However this means that I only ever get my newsfeed once per week.

When I come to expire the news, Oasis expires the news based on when it was downloaded, and not when it was written/posted originally. Due to this I can't expire old articles. I'll try and explain that a bit better:

I download some news on Sunday, it contains news articles from last Sunday all the way upto today. I want to expire articles before last wednesday, but seeting Oasis to 5 days, expires nothing, because it thinks, that although the mail was written and posted days ago, it was only downloaded today, so I won't expire it.

Also I wouldn't mind an expire 'read' articles.... so I can be a bit more selective !!!

Let me know what you think !!! Am I missing something ???

Chances are that this makes it almost definately still copyrighted,
and 'Commercial'. You have a legal copy, and you _might_ be able to
seel that disk on to someone else legally (some newer software on
other platforms, has licesnces to use, and these are non-transferable)
but I don't think giving out free copys to everyone is legal. However
having said that, if you aren't to bothered about breaking copyright,
I'd be interested to see if anyone was around to sue you for it.

5268. Hawk 030 Prototype was at Sacramento!

Newsgroup: comp.sys.atari.st
Date: 1996-03-24 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <DosFI8.49D@ridgecrest.ca.us>
Source record: 148359

Steve Cohen was at the Sacramento Atari Show (thank's guys for
the fantastic show!) with the Hawk 030 PCB. I got to touch it! :).
Then I drooled all over my chin :) Just a little longer.

Mike

Hint: If you have not purchased a 14 meg card for your Falcon,
don't do it. You won't need it with the Hawk. (But you could
still use it, however, if you have one).

5269. CAB/MiNTNet?

Newsgroup: comp.sys.atari.st
Date: 1996-03-24 00:00:00 UTC
From: smithic@cix.compulink.co.uk
Message-ID: <Dos8A1.2uE@cix.compulink.co.uk>
Source record: 148360

Is there any documentation, FAQ etc regarding how to set up CAB to work with MiNTNet under GEM? I have ppp working with Chimera/X but I just get MiNT bus errors when I try to run under GEM/Multitos.

What I have done, roughly:

Edited mint.cfg to run Mintnet, links etc then run gemsys
Installed nohog.acc (not sure why but I have heard it's necessary!)
Moved new CAB.OVL into CAB directory.
Launched bash/tcsh and executed pppd from there - CRASH.
(No hsmodem as that caused mint errors too on my setup.)

Hope that's enough info, TIA.

Ian Smith.

5270. falcon manual needed and falcon ftp sites ??

Newsgroup: comp.sys.atari.st

Source record: 148361

Hi all, I am a new falcon owner, and did not get a manual.
does anyone have one for sale, or one I could borrow read and return ?
also can anyone recommend good ftp sites for falcon software.
thanks,

5271. Trouble with oAESis

Newsgroup: comp.sys.atari.st
Date: 1996-03-24 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <827789314_OASIS_@phil4.demon.co.uk>
Source record: 148362

I finally got round to trying out V0.62 of this program but
unfortuanatly things did not go to plan.

Booting up as per usual with mint and then running oAESis.PRG resulted
in a slightly altered desktop, with changed menus. On selecting the
menus nothing work.... they drop down, and clicking on an item just
makes the menu dissapear. So I can't open a program, switch progs, or
even quit oAESis :(On the desktop the mouse Left and Right click
don't seem to work at all :(

I also tried including it in my MINT.CNF, even worse it bombs out and
mint quits, and bombs out, and I don't even get to the desktop.

All in all a realy failure :-(

BTW: my Setup: MegaSTE TOS 2.05, 48Meg HDD, and MiNT

If anyone can suggest what could cure the problems, or something that
I am doing wrong, I would be very grateful !

> If any of this is possible, what sort of software would I need
> (brand)??

If you connect the STE to a PC via serial - and set the PC with RPRINTER (assuming Novell Netware 3.1X) - then this should work. Of course you'll need a little redirector program on the STE to take input from the serial port and output it to the printer port. You'll also have to convice the PC that its printer is a serial one.

It probably wouldn't be a bad idea to upgrade the STE's serial port for 38400 and equip the PC with a 16550 serial chip/card if it hasn't got one already.

:-)

> disk is SCSI-1. Are these compatible? Or is this impossible ?

I put a Quantum 850Mb Trailblazer internally in my TT and it worked fine.
SCSI1 and SCSI2 are mostly compatible and in my experience the TT is very
unfussed about parity and termination. Both the internal drives I've had
fitted had parity enabled - yet the rest of the bus has parity disabled.
The Quantum Trailblazer has no parity jumper so to change this (not that
I have) you will need to reprogram the drive somehow.

Note some Quantum drives (Fireball range IIRC) won't work as the TT's boot
drive as they require SCSI bus arbitration which the TT SCSI boot code (in
the ROMS) can't do.

:-)

5277. MegaTalk by Gadgets by Small

Newsgroup: comp.sys.atari.st
Date: 1996-03-24 00:00:00 UTC
From: edaniels@seldon.terminus.com
Message-ID: <827765676_OASIS_@seldon.terminus.com>
Source record: 148526

Well, I've hoped the InterNet would allow me to resolve this problem, so here goes...I've wanted to own a working MegaTalk board since Dave Small began advertising it...the options are great for my use including the Spectre GCR and the accelerated modem which is available for ST use. The problem is there were only a few sold, which means there are even fewer for sale used...I found one, but the owner admitted toasting it AFTER I bought it. The SCSI part seems to work, but the serial part is a no go. I contacted the seller who said he would refund my monies, but that was a while ago, and I'm not sure he'll keep his side of the agreement because it's been awhile and, hope beyond hope, I've been trying to find someone somewhere who can work on/fix inform me of ways to test beyond what the manual, (which is VERY complete as per usual with GBS), indicates should be done to get things up and running...I OWN, and had planned to install my SST with a 68030 and 68882 at 50Mhz, (I know it is only reliable up to 40Mhz at best), and the MegaTalk would have completed the package...
Here's what I'm after,
1. A working MegaTalk reasonably priced...
2. Someone who can repair one that's broken...
3. A shoulder to cry on...(I know GBS' history).
Thanks for indulging me, I feel better already...

5282. Cubase 3.1 with 2.0 dongle problem

Newsgroup: comp.sys.atari.st
Date: 1996-03-24 00:00:00 UTC
From: pnf@dana.ucc.nau.edu
Message-ID: <4j2ta1$ovt@ruby.ucc.nau.edu>
Source record: 148531

--

Hello all,

I have a bit of a dilema on my hands.
I downloaded a copy of Cubase 3.1 from
ftp.mcc.ac.uk and tried to run it. It
booted fine untill it looked for the
dongle and then said " no key, bye".
I'm a bit puzzled as I have a legal
copy of 2.0 with the cartridge key and
I assume that everything should work
fine, but....

Please help !

Many thanks,

-ARIK- Implosion Studios at
pnf@dana.ucc.nau.edu

NO, any RLL or MFM drive can be used with the Megafile 20 SCSI board
and interface.

You can use RLL or MFM... so that gives you a few more options... over
here there are many more MFM dirves around then RLL.

..... A lot Cut.....

Thanks for all that it does make it clearer. I had just about sussed
the EMail shot part but alot of it was unclear. The manual seems to
skip over alot of these parts.

>Hope the above helps in some way.

Yes it did,thanks :-)

Because Cubase 3 was quite a major upgrade, they introduced a new dongle as
part of the upgrade path at that time if i remember correctly. You will
need that new dongle to run Cubase 3.x

5286. My apologies in re ExtenDOS

Newsgroup: comp.sys.atari.st
Date: 1996-03-24 00:00:00 UTC
From: leslieh@freenet.edmonton.ab.ca
Message-ID: <4j3bti$mfi@news.sas.ab.ca>
Source record: 148535

I had mentioned earlier that I could not switch CDs without powering off when using ExtenDOS Pro 2.3a, and I want to be clear in saying that the way to avoid this is to completely reinstall ExtenDOS (all settings will remain). It will only not switch CDs if you simply reconfigure the thing. My most sincere apologies to Roger Burrows, and the rest of you.

Leslie

I still play Kick Off II. And I'm damn good! I've never played Player Manager tho'. I'd love to take part in a league, but I fail to see how we could run it. :o(

> Thanks.

YES! very bad!!! Unless the drive says that it can be run in vertical operation... its bad!!!

Drives by specs... usally can only be 5% out of Horizontal before they say you could have problems...

You might be able to run them and have none... but I would not risk it.

>
> 1) is this a standard SCSI 3.5" drive ???

Yes

> 2) does it matter that the drive bought is SCSI or SCSI2 ???

No, most SCSI2 drives are SCSI1 compatible.

> 3) I've heard about parity, will this be problem, and how can I
> change it ??? I have no access to software other than AHDI, and no PCs

Not postive on this but my understanding is that the MegaST Host
Adaptor does handle Parity correctly.

> 4) Also BUS Arbitration, does this affect me ???

Yes, stay away from Quantum Fireball's. They can't be used as a
BOOT drive.

> 5) Is it just a simple job of unplugging the old drive and plugging in
> the new 'bare' drive ??

Pretty much. Of course you must do all the normal patching on the
the drive. As ID 0, it should come already set and ready to go.

> 6) I've heard a lot about bad sectors on new large drives, can I
> really expect these ? and if so how many, and how fast do they spread
> ??? (Nb. can I expect a 50%bad sectored drive after 6 months ?).

Huh? If this were true there would be alot of Drive Manufactures
going out of business. This is a lot of "BS".

> BTW: some of the drives I've been looking at: Quantum Fireball 1.08Gb,
> Fujitsu M1606SA, 1Gb, Seagate ST3123aN, 1Gb, Conner CFP1080S, 1Gb

As mentioned above, NO Quantum Fireball and I think there is one
other Quantum series that won't work. Personally, my preference would be the
Seagate first, Fujitsu second. Conner has been bought out by Seagate.
One thing about Parity: The Seagate still has a jumper on the drive
to disable Parity and the Fujitsu does not. Also, at the Seagate WWW site they
have the spec sheets for all their drives, old and new that show the jumpers and
patching. Fujitsu does too, IF, you can find the correct WWW site. They have

about a dozen of them.
Hope this helps; Rich Mier

It sounds to me like you are trying to run it in full screen mode
Press '-' to make the screen smaller and you should get a pretty good fps

Has anyone else not been able to get Badmood 2.xx to work?
When I try to load any wad file it just says missing pname! Help please.

Kick off 2! of course nearly every day!

I find there is one problem with player manager though and that is that you get sacked after about 3 seasons even though you are winning 5-0 nearly every match!

I do know a way of getting other teams players for free though and a way of increasing your board confidence!

Just to add to this, I've had about 4 different Quantums hooked up to my atari, and the only one I can recommend is the LPS series, they seem to work fine with the Link II - others have been a royal pain in the backside! :P

>doing wrong?!

oops, I've expired the old articles so I don't know what your original
problem was (so I'll invent it) :-)

Sounds like a timeout problem ...

Something else to note. Once it has resolved host and got to the point
where it is receiving data then unless the data comes down fairly soon
then hit Escape followed by reload. Turning graphics off and images to
text only also helps emmensely. WWW116 is not too clever on graphics.
Actually Cab is, its the interface between it and STiK (cab.ovl) which
has the problems. The as yet non existent WWW117 (but hopefully soon
to be) has hardly any of these problems.

>looked wasn't this comp.sys.atari.st well that is what I own and I see
>No reason to look to any other group . Boy you people in Europe sure
>are a touchy lot compared to us in North America . You do know that

Heh. Name calling. I can if you can, but let's do it by e-mail? I'm not touchy in the slightest. Well, maybe a bit. You were ranting on and on about not having questions answered, and I had read Phil's (or Dave's, I can't remember who) reply to every one of your points about 1 week earlier. It is a pain in the arse to download the same tired stuff again and again when you are paying for the privilege. At least when Oasis 2 comes out, I can download headers & choose the shite I want to read <G>.

>there is other software for internet like Stick/Cab , Mintnet ... So
>you see there is life after Oasis that I utilize on a daily basis with

Patronise me some more, oh wise one.

>a GUI to be able to see all of the net web pages . Experiment a little
>and install these other programs and then come back and tell me what
>is missing in Oasis and then we will see if we both agree or disagree

I use the STiK/CAB package on a daily basis too. How do you propose using it for mail or newsfeed? Or is that part of the Mintnet set-up? I have no interest in trying to grapple with MiNT. My system works very well the way it is, and I am happy with Oasis and what is promised in Oasis 2.

As to what is missing in Oasis....

1. WWW support.
2. GUI for online work.
3. The ability to download headers only for NEWS
4. The ability to use the 'Reply To..' field in news postings.
5. A decent _dedicated_ editor - I don't want to use Everest or anything else.
6. GEMmed IRC support.
7. GOPHER
8. A quick way to delete multiple items. A <SHIFT><MOUSE CLICK>

muti-selection would be nice.
9. A way to delete both Mail & Outmail at the same time.
10. Quicker unbatching.
11. Resolving of the loss of the bottom n lines of a news post.

These are the only things I can think of off of the top of my head. As far as I am aware, a lot of these points are addressed by Oasis 2. What are your complaints? I don't recall seeing them - only a diatribe against the writers for not answering questions about Oasis 2.

Nice idea Phil, and I notice some people are being very good in recent
weeks. It's very helpful to everyone if we are as specific as possible in
our subject line. As a point of principle, I don't even look at FS
postings unless a country code is included. One guy selling his Falcon
recently put his country code in the subject line, and ended up selling it
to me!!! I don't moan for no reason ;-)

>BTW: when will this marketplace newsgroup be available ??? it seems to

5304. NosShell Help wanted

Newsgroup: comp.sys.atari.st
Date: 1996-03-24 00:00:00 UTC
From: tone@swoon.demon.co.uk
Message-ID: <827780238_OASIS_@swoon.demon.co.uk>
Source record: 148553

Can any one tell me how to set up Nosshell. I did what it said in the
very tiny Readme file but after I've logged on with stik I run Oasis
and then log on with that to the Internet but nothing seems to happen.

In article <4iuii1$j1h@yama.mcc.ac.uk>
mbge4mdc@meehpb01.ee.man.ac.uk (Farag Elburki user) said:-

>Since most of you probably don't know, Atari World (and,
> I believe Compo) have been liquidated. I din't think it's a big
>secret, but since no-one else has mentioned it here I hope I

Glad you did mention it bacause I wouldn't of known. My subs for AW
are due on the 26th of this month so I've got to get to the bank first
thing to cancell it. Bad news that :-(

>Anyway, if anyone wants to know more about alternative OS's for
>the Atari, my pages might be a good place to start. There's also a
>bit
>of other general Atari stuff, too, plus a selection of other goodies.

You part in Atari Pro was very interesting. I'll have to check out
your pages soon :-)

The Gemulator 4.15 with TOS 2.06 ROMs sells for $189.99 plus freight.
We sell them here at GodFather Computer in Pleasanton, CA.
510/417-6809
Tom Ferreira

It works great and we use one here at the office. This card fits in a
486 or Pentium system and allows you to run most of the TOS programs
out there. Come by for a test drive or call for more info. Also, if
you are on the Internet, visit our WWW pages at:

http://www.godfather.com

5308. METADOS-FAQ anywhere ???

Newsgroup: comp.sys.atari.st
Date: 1996-03-25 00:00:00 UTC
From: gc85@d5.hrz.uni-giessen.de
Message-ID: <4j6spc$qvo@c4.hrz.uni-giessen.de>
Source record: 148207

Hi,

I do need a list of all possible METADOS-Calls, but could not find
any. Could any of you give me a ppointer, where to find such ??

I am looking especially for hints, how to acces a CD at lowlevel,
ie. Reading sektors... I need this, really urgent... (?)
Nah, But i do need this info anyway !

THX !

ATARI CORPORATION ANNOUNCES RESULTS FOR THE YEAR

SUNNYVALE, Calif., March 15 /PRNewswire/ -- Atari Corporation (AMEX: ATC) reported today its results for the year and fourth quarter ended December 31, 1995.

For the year ended 1995, NET SALES were $14.6 million compared to $38.7 million for the year ended 1994. The sales decrease was due to the poor sales of Jaguar, the Company's 64-bit multi-media interactive entertainment system, and related software. The Company reported a NET LOSS for 1995 of $49.6 million compared to NET INCOME for 1994 of $9.4 million. The loss for 1995 is principally attributable to substantial writedowns of inventory and software development costs as well as substantially lower sales for the Jaguar and related software.

For the fourth quarter ended December 31, 1995, NET SALES were $2.8 million compared to $14.9 million for the fourth quarter of 1994. The Company reported a NET LOSS for the fourth quarter of 1995 of $27.7 million compared to NET INCOME of $17.6 million in the fourth quarter of 1994. The income in the fourth quarter of 1994 was primarily from licensing technology to Sega Enterprises. The loss for the 1995 quarter is attributable to substantial write downs of inventory and software development costs as well as substantially lower sales for the Jaguar and related software.

PRELIMINARY FIRST QUARTER NEWS
In the first quarter of 1996, the Company sold the remaining balance of its holdings in a publicly traded security, and realized a gain of $6.1 million. Sales of Jaguar in the first quarter of 1996 continue to be poor. The Company, in late 1995, reduced the price of the Jaguar to $99.95 and is presently test marketing different price points and software bundles for the Jaguar in an attempt to sell its inventory of such products. The Company has also substantially reduced its workforce and curtailed its sales and marketing and research and development activities.

ATARI CORPORATION AND JTS CORPORATION TO MERGE
On February 13, 1996, Atari Corporation and JTS Corporation announced plans to merge the two companies. JTS is a manufacturer of personal computer hard disk drives. "This merger puts us in a great position to capitalize an a very experienced management team and a rapidly growing disk drive market. JTS is using innovative technology, particularly in the 3" disk drive market, and we are excited about its prospects," said Jack Tramiel, Chairman of Atari. Under the terms of the agreement, the new corporation will operate under the name of JTS Corporation and the officers of JTS will become the officers of the merged company. The Atari entertainment business and the JTS disk drive business will operate as separate divisions of the new merged company.

In connection with the merger Atari has extended a bridge loan to JTS in the amount of $25 million. In the event that the merger is not consummated, the bridge loan may be convertible into shares of JTS Series A Preferred Stock at the option of Atari or JTS and subject to certain conditions.

As a result of the transaction, Atari stockholders will hold approximately 601f the outstanding shares of the new company following the merger. The transaction is structured to qualify as a tax-free reorganization and will be accounted for as a purchase.

The boards of directors of Atari and JTS have approved the definitive merger agreement. The merger is subject to certain shareholder and regulatory approvals and other conditions to closing. It is anticipated that the transaction will close toward the end of the second calendar quarter of 1996.

Atari Corporation markets Jaguar, the only American made, advanced 64-bit entertainment system, and licenses and markets software in the multi-platform, multimedia market. Atari is located in Sunnyvale, California.

The above statements regarding the disk drive industry and JTS' prospects are forward looking statements and involve a number of risks and uncertainties.

Among the factors that would cause actual results to differ materially are the following: business conditions and growth in the portable computer industry and in the general economy; competitive factors, including pricing pressures; availability of components from third parties; risks associated with manufacturing of products in India or other overseas jurisdictions and risks associated with JTS' ability to ramp its manufacturing operations, including cost and yield issues.

On coconut@coconut.demon.co.uk, coconut (coconut@coconut.demon.co.uk) typed away:
: Wright, the editor of AW, had informally announced that production of AW12
: had been SUSPENDED.
Sadly this is true. :-(

: to know what's happening with my subscription money. At the time of posting
: this message, I have not heard anything.
Please spare a thought for us writers of the mag who are collectively
owed a lot more money than a few subscriptions. :-((

: I know nothing more, but perhaps someone else does?
AW may be resurrected under a different publsiher.. although I am not
too clear on what happens to subscribers money.. I think that will
remain as a debt for Specialist magazines by the receivers.. and the
AW title taken on by some other independant firm.. if that is the case
then subscribers will have to take their case to the receivers and not
the new publishers.

: If AW stops publishing, then it may be time for me to activate my Atari
: Magazine publishing plan :-)
Go on then.. give us some details.

Sure, but you would be better off with a Minix partition, as it gives you more flexability (such as running long filenames, and some of the good stuff, like MiNTnet might require it).

Depends on what kinda machine you've got, but it shouldn't be that difficult to find a used 20mb drive for almost free these days; this is exactly what I did.

What??? No Way. You can run them in Any position so long
as you don't move them while the Drive is spinning! On Mainframes
we run them all in the Vertical position. Plug 'n Play, Hot, off of a Bus
that allows up to 8 drives to plugged into it. 8 because the newer spec's
allow up to 32 (31 plus the controler) HD's on a single controler.

Yes

Is it easily done, and if so, which way should the
>writing on the chips be facing (upside-down or right-side up when looking
>at the board from the front of the computer)?

Upside down as I remember...

Do the chips also have to
>be in any particular sockets, or does it make any difference?

Yes match chip number to number on mother board, note notch position on old
chips before you take em out. Location is bottom right corner of mother board
under number keypad.

I was also
>wondering if there's any chance of damaging the chips by installing them
>the wrong way.

Yes you can damage the chips if you put them in wrong and turn the power on. Or
if you have a lot of static as you handle the chips (and your computer!)

If anyone could help, I would be very grateful:-) Thank you.

Many thanks, Stig. The telephone numbers in the UK have changed in the meantime so the full number is now 01434 220283 but in every other respect the information above is correct.

I've just phoned Joe Clemson on that number and he's still there and still hoping one day to get the newsletter part of things restarted at some later date if he ever finds he has the time - that time isn't now unfortunately.

However he has confirmed that he's happy to take correspondence from individuals and keep hold of names and addresses - acting as a focus for information and resources that are otherwise difficult to get hold of, awaiting the time when he can get backinto the full swing of things.

With those provisos mentioned the Atari ST Christian User Group will be entered into the lists I hold here for the UK Association of Atari User Groups and distributed along with all my other information.

On a less formal note, Joe was very happy to be remembered by both yourself and Phil Grainger who he readily recalled from previous meetings or correspondence.

Many thanks for your help.

5326. Q's about a new SCSI drive ?

Newsgroup: comp.sys.atari.st
Date: 1996-03-25 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <10893_hsideras@mettav.demon.co.uk>
Source record: 148379

Hi Phil,

p>
p> At the moment I have a TOS2.05 MegaSTE with an internal Seagate ST157N
p> 48Meg HDD. I am sort of considering upgrading this but I would really
p> like to know where I stand:
p>
p> 1) is this a standard SCSI 3.5" drive ???

The host adaptor ensures the conversion from ACSI to the SCSI standard, yes.

p> 2) does it matter that the drive bought is SCSI or SCSI2 ???

No. SCSI 2 will be a newer, faster drive and is sufficiently well supported
but it doesn't matter in itself.

p> 3) I've heard about parity, will this be problem, and how can I change
p> it ??? I have no access to software other than AHDI, and no PCs

Parity must be disabled. Without appropriate software there must either be a
method of disabling it via jumpers or you must insist that your supplier
disables parity for you - insist on it as a condition of purchase or go
somewhere else.

p> 4) Also BUS Arbitration, does this affect me ???

Someone else is better qualified to help here - I forgot <g>

p> 5) Is it just a simple job of unplugging the old drive and plugging in
p> the new 'bare' drive ??

Yup - as long as you've set the ID number the same as your old one (it has to
be ID 0 on the MSTe because changing ID numbers is handled by the host
adaptor for some peculiar reason).

p> 6) I've heard a lot about bad sectors on new large drives, can I really
p> expect these ? and if so how many, and how fast do they spread ??? (Nb.
p> can I expect a 50%bad sectored drive after 6 months ?).

A new HD will have any bad sectors SCSI mapped out during manufacture. You
should anticipate none. Your drive will come with a guarantee - nowadays
between 2 and 5 years. If it develops *any* before this time, quite frankly
I'd return it to the supplier. Get a written copy of the guarantee and keep
your receipt for added piece of mind.

p> Can anyone recommend a particular drive type that they know will work
p> with the above setup, with the minimum of fuss ???

Things change so fast I'm out of date. Someone else is sure to help (I hope).

Source record: 148382

RM> I agree with you Brian that patience is a virtue and I will
RM> sit back and wait patiently for the new version to come out .

That sounds like a reasonable course. It's been interesting
following this topic for the past few weeks! :)

I think this all started when a beta user was teasing us all about
having a new version. While it was meant in fun, I guess this points
out the problems of having such quick access on the 'Net. It made
the 'have-nots' pissed off at the 'haves'. Many folks want the
latest & best 'Net software, and that joking message, egging people
on, kinda hit a few nerves.

Then, of course, programmers rarely make good public relations
people nor good manual writers. (I was reading a manual just the
other day - started out, "The easiest way to explain this program is
to view it as a piece of (Unix, C+, Fortrain, I forget which) code,
as in, the x operation flows into the..." and so on. Well, sure,
that might be easy for other _programmers_ to follow, but not all
the users of that piece of software were gonna be programmers!!! :)
Our personalities give us our best-suited areas. The best programmer
around probably shouldn't be answering phone calls, nor writing
manuals. Unfortunately, shareware kind of forces that issue.

A friend of mine works in an advertising print company. This fall
(their busy season) the folks working in customer service often went
home in tears - it was a tough year. & these folks are _trained_ to
handle phone calls.

I know I'm rambling on here, but come on everybody - let's be
friends. :) With few exeptions, a really good programmer will write
lousy documentation, & totally ignore our requests for help. Someone
who wrote a great manual won't have software worth booting. And just
because everyone has E-mail access, customer support is still going
to be lousy & slow, unless there is enough budget (in the Atari
market???:) for a customer service branch.

Now, everyone will _try_ to do great software, manuals, & support.
But it's a rare thing for all three to come from the same person. In
this world of Atari shareware, let's all take a deep breath, stay
calm, and have some fun.

:) :) :) Of course, I _really_ want stable Atari 'Net software, and
the sooner the better... :) :) :)

david knight (david@ritter.demon.co.uk) wrote:
:
: Has anyone else not been able to get Badmood 2.xx to work?
: When I try to load any wad file it just says missing pname! Help please.

Bad Mood 2.xx needs an IWAD file to work. I can bet ma bottom dollar that the WAD files you're chuckin at it are PWAD files. Chuck the WAD file into a text editor (such as EvereST) and you will see that the first four characters in the file spell "PWAD". If they spell "IWAD" then it should work. If it is a Doom][WAD, double click bm205a.ttp and into the parameters box type '<filename>.wad map01'. That should load map01 of the WAD file. For a heretic WAD type '<filename>.wad e1m1' and that should load episode 1 mission 1 into BM.

Hope this helps...

Chris W.

Hello,

Walter Hoechsmann (zxmhw01@hp01.zdv.uni-tuebingen.de) wrote:

: Please post me a message, if it is still available (even in the UK or
: anywhere else). I once saw V1.0 at a friend of mine and since then I'm keen
: on it - but then some SW-dealer told me SHIFT was off!

The development had been taken over by Joerg Tochtenhagen who worked
together with the no!-programmers. The new version Arabesque 2 has been
released last year and works all right with MagiC3 and NVDI4.
I don't know whether there is an English version as well.
The new Arabesque only consists of a vector part and its structure
changed completely to a more powerful program.

I've been told that a bitmap soft would follow, but it seems that the
no!-pogrammers now have given up developing stuff for Atari.
Neon Graphix already exists as an OS/2-version!

The first prospectus I got this year announced that they change to OS/2 now!

Bye,

Kerstin

Hi! I just recently bought a single speed external CD Rom drive for my STe computer (the price was right at $35). Here is my configuration:

Atari 1040STe - 4 megs of RAM
Atari Megafile 30
100 mb SCSI external hard drive
Single Speed CD ROM drive

Well, that is an abbreviation of the hardware I have on it. The question I have is, how do I make the CD Rom able to be recognized by the STe? I tried copying the files of the METASYS in the C:\METASYS directory and then I put the CONFIG.SYS and the METASYS.PRG program in the C:\AUTO directory. NOTE: Metasys may be another name, I forgot it off hand. It just says that it doesn't recognize the unit. HELP!

By the way, IDCHECK.PRG does know about the CD Rom drive, I checked it.

5338. Cannot get BIGDOS to Work

Newsgroup: comp.sys.atari.st
Date: 1996-03-25 00:00:00 UTC
From: gigxr01@nt.com
Message-ID: <gigxr01-2503961009210001@47.85.0.99>
Source record: 148391
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hi
I have tried using BIGDOS on my STFM, but cannot get it to work.

According to the docs, it should increase the number of partitions to 30.

I assumed this means I can have more than the standard 14 hard drive
partitions, but when I tried this, I still canot access anything above
'P'.

My setup:-

STFM (4 mbyte) running MiNT.

Drives C -> P already installed.

Disk driver is AHDI 6061 (patched with the included .BDF file).

As I currently have more partitions than can be directly accessed, I have
to hide some (I use SUPEDIT.PRG to turn off the partition).

When I installed BIGDOS, I un-hid the extra partitions.

I could not access partitions abobe 'P'.

One possible problem is that BIGDOS only works with GEM/MS-DOS partitions
& my last two (would be Q & R when un-hid) are Minix partitions.

Does anybody have BIGDOS working ?

I too have sometimes not seen my post in news groups
(not that anyone cares:) and have had trouble sending mail
out. Usually it looks good going out from where I set, but have
found out that the problem has always been 1). The Sun server
of my provider is having problems or, 2) a link down the road
is down and anything my server sends out dosen't make it to
it's destination.
I found this out after I took an axe to my PC :)

I don't know a lot of the technical stuff, but these guys (excuse the informality)
modify the Jaguar so that it can connect to the cartridge port of an (any?)
Atari. They have a limited, but supported, package that allows games to be
programed on, say a Falcon :), and downloaded to the Jag where they can run.
The only limit is the Jag's 2mb memory. Programming the custom chips also requires
a Jaguar developers kit, or the closest thing you can find :).
I was sent an e-mail of the address to contact for the conversion and am
awaiting a reply. There use to be a web site, but it looks like it's gone now.

You need a setup like this:
METADOS.PRG & CONFIG.SYS in the AUTO folder
CDARGEN.BOS & whatever.DOS (can't remember the name) in
a separate folder (e.g. C:\METADOS)

Then your CONFIG.SYS file has to contain something like:
*BOS, C:\METADOS\CDARGEN.BOS, Z:n
*DOS, C:\METADOS\whatever.DOS, x:Z

In the above 'n' is the SCSI id that your CD-ROM drive is set to,
and 'x' is the drive letter you want the CD-ROM to appear as.

BTW, there are a number of bugs in the freely-distributable version
of MetaDOS+drivers ... but it's a starting point. If you find your
setup useful, you may wish to look into getting a commercial driver
such as the one my company sells :-)

the problem is that Metasys (or is that MetaDOS?) requires MiNT
in order to run.

believe me - don't bother with it. Get Extendos Pro (currently
sitting at version 2.3a), which doesn't require MiNT, and is much
more stable. I've used it for the last year and a half, and have
nothing but praise for it.

I looked into this myself some years ago. Turns out the answer was no for me because I had already installed an Adspeed (16MHz) upgrade.

I am not sure if you would still have enough room to accept the TOS 2.06 board upgrade. (The answer about putting the 2.06 chips in the existing TOS sockets underneath.... will not work.)

I have an unmodified, early model Falcon030 for sale with 4Mb RAM, 50 Mb hard disk, mouse, VGA adapter, original box and manuals and some pre-loaded software as came with the machine. This unit has seen very little use (none in last 6 months) and I will guarantee against DOA. $500 plus shipping from Florida.

If interested, reply by email only to hutchinj@orlando.veda.com

> of STAR and the Towe Ford Museum.

Eric,

I'm very pissed about missing this, but the owner of Computer Direct up in Canada told me it was SUNDAY. Imagine my suprise when I showed up at the museum yesterday, looking at a near-empty parking lot..

Anyway, I would appreciate a short summary from you and any other people who were there.

What companies were there? What software was demo'd? Any way cool deals offered? How many people were there?

I mainly use my Falcon for music, Cubase Audio.. so any music software info would be appreciated if/when you (or any others who were there) have a spare moment.

Thanks

-Mark

Last week in my mail packet I saw someone that was selling an Atari Falcon030, they did not ask a price, they asked for offers, so I offered $100 for it, that is about the limit of my monthy funds. So what do I get? So far I've gotten at lest 50 e-mail messages offering to BUY my falcon which I do not have in the 1st place.

There WAS an ad in the sunday newspaper for someone selling both a STacy and a Falcon, $500 for STacy, $600 for Falcon, wish I had the money for either one of them. But the best I have is my Mega ST4 which is NOT for sale, [unless you want to trade a falcon for it or a TT!].

Slc.Dennis Bishop keeper of the Talascope FAQ on my Mega ST4.

no. yes.

I don't think Phil has finished this bit yet but, apart from a nice nag screen there will be limitations on the unregistered version. For instance only being able to use the news tree system once per session (the news tree is a graphical representation of the thread tree showing which article commented to which - very neat).

Best wishes

Contrary to public opinion, atari mice are still available and sold. Would you like one?

Another option is to use a public domain program (the name of which is not handy right now but you will find it at the umich ftp site) and attach the mouse to your serial port (not a problem if you have a mega ste or tt because you have more than one serial port).

I really like that last shot at the PC. Isn't it ironic that the Atari was
never considered a "serious" computer and was a "game machine only" and now 80%
of PC owners play mostly games on their computer? Tables have turned....

>As
far as we know Cubase Audio runs only in ST RAM. >Is there a new patch?

I have some new brochures from Calamus. DMC is now MGI and has launched
Calamus 95 and MGI Photoworks in addition to the Calamus NT that has been
around for a while. Nathan Potechin is still there, the company has grown, and
now the company is under the charge of the guy who started AST computers.

The latest promo material has this info:

MGI Software Corp
905-479-1880 Tel
905-479-1882 Fax
40 West Wilmot St
Richmond Hill ON L4B 1H8
www.mgisoft.com Web Address
calamus@mgisoft.com Email

They are still VERY supportive of Calamus SL for the Atari.

I found if I wiped out the whole directory including the CACHE.CAB index file I could get rolling again. Your hotlist works again but you have to download your pages all over again.

A new version of CAB or the CAB.OVL is said to be coming out soon.

>Howdy. I just bought a used Falcon. It was shipped to me, & maybe not
>packed that well. I've got 7 days to keep it or return it. It works
>great except for a glitch with the hard drive. It has a Maxtor 25252
>AT IDE ~250meg drive. Here's the problem:

If you have "flakey files" run Diamond Edge and mark your bad sectors in the non-destructive mode. Open your Falcon and check a few things, 1) the power leads that go from the power supply to your mother board right beside your internal IDE hard drive should be bent towards the front of your computer rather than looped towards the back near the L2 coil [this was an official Atari fix] 2) Remove the copper finger heat sink attached to your drive [if it hasn't already been removed] 3) Check the 4 screws holding your hard drive to the mount and loosen them so they are firm but not too tight. You could put some Locktite in the little screw holes carefully and then loosely screw them in. Flakey files and clinking noises can be due to these things.

>One of the folders had 'flakey' files in it (happened to be Neodesk
>which was trying to autoboot from the *.INF file). After a dozen boots
>(more or less sucessful), it would error out ("Your output device is
>not receiving data") & lock up. I used ICD Pro to boot it from floppy,
>and ran Edge on the drive. It's all one partition, & Edge returned an
>error: DOS error #-1 Reading DIR Scectors Location 6723. I had Edge
>clean up the errors, & it deleted the whole Neodesk folder, & found 10
>files of lost clusters. It boots fine off the hard drive on it's own
>now. The 10th file of lost clusters must have the bad directory sector
>incorporated into it, as that file can't be read. Everything else
>seems to work ok.

I have always had grief with about 20 megs of my 80 meg original internal Conner hard drive. I always attributed it to the relatively poor quality of the consumer type Atari chose to put in the Falcon. I just marked the sectors bad with ICD and isolated most of them in one partition. I avoid them and things seem to be realtively ok now. I have 3 external drives so I use it mainly for booting and portable use when I take my Falcon with me.

>This hard drive seems to start & stop itself, and makes a light
>clucking noise as if you lightly drop a ball bearing as it spins down.
>It does this quite often. I assume this is quite normal, & just a
>typical 'notebook' drive saving power, right?
>

Not really, it is still possible that your drive has become "bad". Check to see if any warranty still applies as many good drives have warranties of 5 years or

3 years

>Anyhow, my question is, does it sound like everything is ok, & the
>worst I need to do is reformat the drive to take care of the bad
>sector? Or, might I have picked up worse problems in the shipping?

Laptop drives are built for bumps, I doubt this happened as a result of
shipping. See above...

I assume you mean PS art files? Atari ST Review Issue 25 had a program called ECVerter that could convert Post Script picture files to Calamus CVG files and back. You should be able to find it around on ftp or bbs sites. DMC/MGI still recommends it to people who enquire.

>like to know where I stand:
>
>1) is this a standard SCSI 3.5" drive ???

Yes
>2) does it matter that the drive bought is SCSI or SCSI2 ???

maybe, SCSI 1 better, SCSI 2 and you would have to put drive in external case
and use the Link II to connect to your dma port I think.

>3) I've heard about parity, will this be problem, and how
can I >change it ??? I have no access to software other than AHDI, and no PCs

In many cases, you can disable parity with a jumper setting specified in the
manual. TT's & Falcons ignore parity. ST and Ste's you need to disable it.

I have seen a few Quantum drives where only software could disable the parity.
The ICD bbs at that time had a little program to run once to disable parity.
It started with a name of LPS I think.

>4) Also BUS Arbitration, does this affect
me ??? >5) Is it just a simple job of unplugging the old drive and plugging in
>the new 'bare' drive ??

Just about, your drive has to have a SCSI id of 0 if it is to be the boot drive.
The mega ste has a series of dip switches on the drive controller card that you
shouldn't need to fuss with.

>6) I've heard a lot about bad sectors on new large
drives,
can I >really expect these ? and if so how many, and how fast do they spread
>??? (Nb. can I expect a 50%bad sectored drive after 6 months ?).

If anything, I have found newer drives to be more reliable than drives just 2
years ago.
>
>Can anyone recommend a particular drive type that they know will work
>with the above setup, with the minimum of fuss ???

I always liked Fujitsu, Quantum, and Seagate. Don't get "consumer quality"
drives-they wear out sooner and have shorter warranties.
>

>BTW: some of the drives I've been looking at: Quantum Fireball 1.08Gb,
>Fujitsu M1606SA, 1Gb, Seagate ST3123aN, 1Gb, Conner CFP1080S, 1Gb
>

I have never liked Conner drives.

You should have the newest ICD Utilities of HD Driver to really manage a large
drive well. I sell HD Driver if you are interested.

To be honest if you can get on any of the remaining ST BBS's (see below) you
will find more upto date files than in most PD libraries..

The ST BBS's that are still around are die-hard ones with many many files.

I can no problem having a hard disk drive operating vertically.
My Falcon has been in a tower for 8 months now with no problems
showing up on the internal Seagate 2.5" IDE or the floppy for that
matter
The instructions for my SyQuest EZ135 make no mention of position at
all. The 'bumpers' on the side hint at using it on it's side.
System Solutions Maxis drives have SyQuests in on their sides and I
assume that the hard drives in the same case are also on their sides.
The thickness of the case means it has to be.
And what about portable PCs, their drives have to put up with all
sorts of treatment.
A hard disk drives heads will be designed to stay a fixed distance
from the platter and can cope with being knocked about. Using a
drive vertically would mean that the stepper motor has to hold the
weight of the head arm, the mechanism will have been designed to do
this.
Of the spinning of the platter won't be a problem because one half
is going up hill and the other half down hill.

I doubt a hard drive on the market today couldn't cope with with
being used at any angle.
Obviously if the drive has instructions not to use it vertically

then don't. Otherwise you shouldn't have much to worry about.

Rich.

Using CoNnect I have also attained the dizzy height of 6000cps but
this was downloading from a BBS, both myself and the BBS were using
Falcons and 28800 modems.
I presume if you are using CoNnect then, Chris, you are making a
direct phone connection rather than going the Internet.
For downloading news and ftp'ing through the 'Net I have never topped
3500 cps, usually around 2000 for news.

david@ritter.demon.co.uk (david knight) said:-

{snipped}
>
>Has anyone else not been able to get Badmood 2.xx to work?
>When I try to load any wad file it just says missing pname! Help please.
>
>David
>

I had BadMood v1.9a and to save disk space I used a small WAD file
(~90k). I now have BadMood v2.03a and it would not use the 90k WAD.
It gave the missing pname error.
So I got the full 10Mb Doom WAD which works just fine.
Perhaps I will try the Doom2 WAD sometime.

At full screen BadMood v2.03a gives 4-7 fps which doesn't feel to
slow for just walking round. For playing properly it would be too
slow.
Hopefully Doug can add the collision detection, monsters and weapons.
The extra stuff shouldn't add much CPU load.
Keep at it Doug.

In another posting in this thread someone said that Doom on the Jag
was running at a resolution of 160*100. I am prepared to believe
this is correct but I am surprised, it is more likely to be 320*200.
In an interview with the developers I remember reading they stated
that they thought the Jag was about as powerful as a 486DX2-66 PC.
The PC I have played Doom on was of this spec and is more than
capable of running at 320*200. And the pics of JagDoom I have seen
look to be 320*200. Any extra blockiness in JagDoom will be due to
the lower resolution of the texture maps.

This board is OXO CENTurbo 2, as mentioned in the STF report on the
Paris Atari Show. It would appear to very similar the FX board.
The 80MHz seems to a speed enhanced 030 rather than an 040 or 060.

STF gives a Web site for OXO Concept as http://www.oxo.ch/

y> than HDX...). A replacement for AHDI might be nice to...

The only other one available here in the UK is ICDFMT, but (yet again) I
wonder why you need one. All hard disks have been supplied ready formatted
for many years. All you need is partitioning software as supplied with ICD,
HDDriver etc.

Mark Fassett (mark_fassett@intuit.com) wrote:
:
: Anyway, I would appreciate a short summary from you and any other people
: who were there.

Sorry you missed the show. It was a nice one, but it does seem to be winding down a bit as the years go on. Still, attendance was about 300 and, as STAR has finessed the show to the point that it costs next to nothing to put, as long as there is any interest on the part of vendors, I suspect the show will continue.

As for who came, wouldn't you know it, I can't find my show program. To make things worse, I am not much of a music buff and so probably am not the best one to ask about that sort of thing. But vendors included (off the top of my head): dealers such as Computer Direct, Toad, Systems for Tomorrow, B&C Computers, and STeve's Computer Technology. Software vendors included Homa Systems House, Application & Design, Gribnif, and Oregon Research. Atari Classics and ST Informer were there, and Wizztronics was there (they showed a nice Falcon accelerator that speeds the CPU, bus, DSP, etc up to 50MHz, I guess the add-on actually replaces the CPU?).

No earth shattering deals, just the usual 10% or so below cost "show specials." Systems for Tomorrow had some $40 single speed CD Roms that were popular (for $70 get the unit itself, cable, extenDOS driver, and one CD).

Two local Internet Service Providers were there selling connections and giving away pre-configured copies of the STiK Internet Connectivity Package that a local user group (Yolo Atari Club) put together. YAC was there too, flogging their disks and memberships, STAR was there, and other user groups including ABACUS (from San Francisco), A-BUG (from Idaho), and others (I wish I had more time to visit them so I could tell you about them).

I know this is an incomplete show report, maybe others can fill out the blank spaces.

Why don't you grab a PD terminal program like FizzDizz or Teddyterm?? Both these programs are as good (some say better!) then their commericial counterparts.

Try:

micros.hensa.ac.uk/micros/atari/tos/p/p013/
07/11/94 ---- TEDDY-TERM 2.14 Comms Terminal program (E)

Sounds like a bit of confusion :-)

Nos does the online part - Oasis does the offline GEM part or Snews
does the offline CLI part. You choose either Snews or Oasis - both
come with NOS.PRG which is Nos.

STiK does the same as Nos but for the likes of Cab, IRC, AntMail,
MG-FTP etc. So, as far as anything to do with Nos, Snews, or Oasis,
forget about STiK and anything to do with WWWxxx and vice-versa.

So which are you trying to do? Then we can help!

The actual version is 2.05 and used only IWADs (from DOOM, DOOM2 and
HERETIC)
It uses the embedded textures and display between 5 and 7 frames per
secondes (don't ask too much for the instance)

You can find it in : http://rand.thn.htu.se/cgi-bin/buildpage?bad_mood

>David

It's normal coz badmood 2.xx uses only IWADs from original games coz
it takes the textures in it.
The wads you use must be PWADs which don't contain all the data
(texture, sprites, colors....) I think IWADs exists in public domain
but I don't know where...

Aloha,
Can MINT be set up to run without a minix partition?
I'd like to try using Mint, and the PPP sockets that go with it
to run CAB. I'm short on Disk space however...and would rather not
be forced to dedicate 15 meg of HD space just to run a PPP link.
I'd like to set a Mint based environment that will load up
the PPP stuff, dial/log in, and open Geneva and NeoDesk as the shell.
Can this be done? Does the Mint CAB.OVL require minix, or will
it do a numbered cache like the STik overlay?

Thanx,
Brian

5413. Germany,Help,Junior Prommer.

Newsgroup: comp.sys.atari.st
Date: 1996-03-26 00:00:00 UTC
From: Gudjon Gudjonsson <gudjong@treknet.is>
Message-ID: <4j7j03$eoh@news.treknet.is>
Source record: 148220

Hi there you German friend's.

I was wondering if someone of you Atari owners could help me. The thing is that few years back I was a owner of an Atari ST computer and owned a EPROM programmer form a German company called MAXON the name of the programmer is JUNIOR PROMMER. Now I miss using it desperately because it is an outstanding programmer for EPROM's and the Atari software was very good.

Now what I want to ask you is do you know if this piece of hardware could be used with either a DOS/windows machine or a Apple MAC.

I think at the time this was marketed for few other computer brands.

Please respond to my Email address if somebody knows or have solved this problem.

It almost seem worth buying an Atari for this.

With Thanks In Advance:

Gudjon Gudjonsson
ICELAND,

From: gregor@shelly.goldengate.net
Message-ID: <3197cc$142e27.a3@goldengate>
Source record: 148221

I've been having a bit of trouble with FZDT crashing on me while reading long lists (such as FTP site directories etc). Today, while using a da calculator, I came across the "memory" menu and the release extra memory option (.947M). Could this be the problem?
I've never noticed this before as I don't often call accessories while using FZDT.
I released the memory and the selection was "greyed" out. But if I go back to the use accesories option, it's again selectable. any advice?
thanks in Advance....

: According to the docs, it should increase the number of partitions to 30.

: I assumed this means I can have more than the standard 14 hard drive
: partitions, but when I tried this, I still canot access anything above
: 'P'.

: Disk driver is AHDI 6061 (patched with the included .BDF file).

: I could not access partitions abobe 'P'.

AHDI cannot access more than 14 partitions. With my patch it is possible to
access MS-DOS partitions bigger than 32 Mbyte. But no drives above P:!
For partitions above P: you need a hard disk driver with XHDI. And the driver
must support XH_DOSLIMITS()!

The only ones I know are:
CBHD >= 4.51
HDDRIVER >= 4.50
ftp://acp5.chemie.uni-kl.de/pub/atari/hddriver46_demo.zip

There are links on my WWW page.

For RAM disks above P: no hard disk driver is needed. ;-)

: One possible problem is that BIGDOS only works with GEM/MS-DOS partitions
: & my last two (would be Q & R when un-hid) are Minix partitions.

The original GEMDOS shows a "full" drive for a minix partition. Big-DOS
ignores them and you cannot open a directory window for a minix partition
on your desktop.

: Does anybody have BIGDOS working ?

Shure. Every day. :-)

--

Tschues, Rainer

Mit Big-DOS sind grosse MS-DOS-Partitionen auch fuer Ataris kein Problem.

Message-ID: <3158271C.68D3@shef.ac.uk>
Source record: 148227

I have a 2Mb STe which I haven't been using for a while. I tried setting
up
as a terminal for my linux box a while ago. But is there somehting
better I
can do with it. I don't really know what software is avialable on the st
these days. What are Magic and Mint, what do they do and would they need
a
hard drive? Could I use my Linux box over a serial link as an extra ST
disk?

I've been looking for a better terminal emulator. But ultimatlely an ST
is
better that jsut a dumb terminal. Could I use it as an X terminal?

Thanks++

Dave

d> going to
d> get massacred when the competition heats up. They're not good enough
d> at their
d> business to survive.
d>
d> So far as I am concerned these guys are a complete joke.
Lets be honest Dave. In this game like many others you get what you pay for.
Demon is cheap and BTNet is dearer.

Demon are snowed under because they have so many subscribers and because they
are so cheap then they have to keep costs down somewhere.

BTNet charge more for their service but because of this then they can supply
a more professional service!

Also BTNet are one of the big 4 (or is it 5?) internet backbone suppliers in
the UK, so other suppliers go through them for access.

So at the end of the day, are you serious about internet access and are you
willing to pay for the level of support required?

Spencer

Chris Gray (cgra@btmaa.bel.alcatel.be) wrote:
:
: Now for the bad news. SysSol can't get CAF to run reliably at 36 MHz on
: my Falcon; after about 45 minutes it bombs out (bus error, I think) and
: they don't know why. As I write they are still looking at it, but I may
: have to be content with recording at 16 MHz and only being able to edit
: at 36 Mhz.
:
: Everything else works fine, the machine will read and write the hard
: disc all night, but CAF seems to have a problem.
:
: THere are of course several revisions of the Falcon motherboard: looks
: like the second batch to arrive in Belgium was not one of the better
: ones. :[

FX is a great board, but _VERY_ tough to tune-up... I repeat: *VERY*
difficult to fine-tune to work reliably in 36, or especially 40 MHz
modes. I don't know what S.S are doing, but in order to get my own
Falcon to run at 36 _at all_, I had to make two small wiring modifi-
cations to the so-called "clock patch", thus changing the internal
timings a little. Those wirings are _NOT_ described in the current
FX manual, but can be found in one of the README-files on the driver
disk!

I doubt the people at any service center have the time and patience
required to try all the possible hard- and software settings, so it
may well be that you'll have to tell them to try these wiring tricks,
or do the final tuning yourself.

No, it's not always that tricky with FX... Some motherboards, as you
said, just are better for FX - some are worse. Don't give up, though.
It's worth all the trouble, believe me =) !

:

Tommi (running at 36 MHz right now..)

Hi you just have to format the disk on the ste, the regular way and
put your disk in the pc to copy them on the disk. And the Ste could
read the Text file, (the text need to be an Ascii file)
That's all.

Yes and yes. I've already given these clowns the sack, and they are just
serving out their notice. What a joke.

Whilst I appreciate your comments, when I signed up for Demon, I don't
remember anyone saying that the service might be crap but what the hell - it's
cheap. I remember them saying the service was good - which it isn't.

If I buy a car at a bargain price, I still expect it to go. if I buy internet
access at a bargain price, I expect to get access to ftp, usenews and email.
Simple really n'est ce pas?

Anyway. As I said, I've already given the buggers their marching orders and
they have agreed to refund me back to the beginning of March as acknowledgement
of their absence of service.

Now. I am almost ready to sign with Pipex so I can get a web page up. I think
I will ask for references from users though, anyone out there care to vouch
for them? Does Oasis work with Pipex

Hello, Ladies & Gentlemen,
I'm living in the Netherlands and it's very hard finding anu software for the Atari ST. Currently I'm desperately searching for a copy of STOS and I can't get it anywhere here. So I'm asking you if:
1. you can spare me a copy;
2. you know of a company (preferably in Holland) where I can get STOS).

The British Magazine ST Format gave a copy away a long time ago but they haven't repeated this feat yet. Can anyone help me?
My email is marcwise@dds.nl

Thank you kindly for taking the time to read this article.

Marc

Actually, I saw the cable at the Atari Canadian Exhibition in Toronto 1 year
ago. It was to connect a VGA (not the RGB SC1435) or SVGA monitor to any Atari.
Very handy, I thought but I didn't buy one at the time and have regretted it
since.

5434. REPOST - TT computers and video cards for sale

Newsgroup: comp.sys.atari.st
Date: 1996-03-26 00:00:00 UTC
From: sirsmedley@delphi.com
Message-ID: <JXOpN9J.sirsmedley@delphi.com>
Source record: 148241

FOR SALE - Two Atari TT030 computers

Both have:
4 megs ST RAM
TOS 3.06
720K floppy drives
modified parallel port driver hardware
(for longer transmission distance)

One machine is full US spec, and has a 60 meg hard drive.
The motherboard is revision H, for those who care.

The other is UK spec (UK ROMS & heyboard) with a US power supply.
It has a 120 meg hard drive. (I made sure this machine had the
larger hard drive to offset the minor inconveniance of the UK
keyboard.) The motherboard on this one is revision J.

Since both machines already have TOS 3.06, you only need an AJAX
chip to upgrade to 1.44 meg. (The drives are already 1.44!) I
never bothered to upgrade the floppy because I hardly ever use
floppies. BTW, Toad Computers has AJAX chips for $40.

PRICE - $450.00 each (including shipping in the "lower" 48 states)

I also have three AlberTT 1.2 video cards. They support one video
mode, 1024x768 with 16 colors, but it sure beats the TT medium
resolution of 640x480 with 16 colors! (You will need a monitor
that can support this resolution at a 48 Khz horizontal scan rate
to use this card.)

Price - $110.00 each (including shipping)

For one of the TT's and a video card, the price is $525.00,
including shipping.

Any questions? Contact me via e-mail at sirsmedley@delphi.com
or smedley@gte.net (I only check the Delphi address once or twice
a week, so for a faster response, write me at GTE.)

Hej Sanjay,

> Let's make something that will blow the doors off of those PC sound
> cards. I'll provide original samples of instruments, and <you> will
> have the coding experience to make a nice GEM interface and underlying
> structure.

I've got no programming experience whatsoever, but I'm a MIDI musician since many years.

I cannot help you personally, but I'd recommend you to get in touch with Emil Johansson (d93ejo@t.hfb.se) and his partner David Steen. These guys are currently working on such a project, and I wish them the best of luck; it's *really* about time someone set free the real power of the Falcon!

Hopefully you can inspire eachother on this project. Let me know the rest of the story!

Best regards

-Sven-

The address to Atari updates is:

ftp://ftp.mcc.ac.uk/pub/music/cubase/UPDATES/Atari/

or

ftp://ftp.midifarm.com/midifarm/pub/steinberg/

and there's some stuff in:

ftp://ftp.steinberg-us.com/dist/atari/

This is a new comercial recoding of new guitar music from Cuba.
The recording includes music for two guitars and flute and guitar.

Also peforming on the album is the best jazz Cuban guitarist
Jorge Chicoy. He has peformed with Joe Pass and michael Legrand.

The music is very relaxing and beautiful. This recording was done
on the Falcon 030 computer using Logic audio and Sony DAT.

Please get more information about the recording, artists etc.
from our WWW pages where you can also listen to samples from the
new album! You can also use lynx to read the pages.

You can also send e. mail for more info. Tapes are $9.95 (P&H)
included!

I find that MiNT/SingleTOS works if I don't specify *any* INIT=, i.e. if
I just remove the last line (exec /usr/bin/X11/xinitrc) from the mint.cnf
file I use for MiMT/X11. (Found this out by accident when I screwed up
my .xinitrc).

> My Falcon is currently at System Solutions to have a Blowup FX fitted.
> They assured me that it would be compatible with Cubase Audio: in fact
> Cubase Audio is the No.1 application that *has* to work. A Falcon
> that can't run CAF is like a TT that can't run Calamus, or a PC that
> can't run Doom ;>.

Now for the bad news. SysSol can't get CAF to run reliably at 36 MHz on
my Falcon; after about 45 minutes it bombs out (bus error, I think) and
they don't know why. As I write they are still looking at it, but I may
have to be content with recording at 16 MHz and only being able to edit
at 36 Mhz.

Everything else works fine, the machine will read and write the hard
disc all night, but CAF seems to have a problem.

THere are of course several revisions of the Falcon motherboard: looks
like the second batch to arrive in Belgium was not one of the better
ones. :[

>Nos does the online part - Oasis does the offline GEM part or Snews
>does the offline CLI part. You choose either Snews or Oasis - both
>come with NOS.PRG which is Nos.
>STiK does the same as Nos but for the likes of Cab, IRC, AntMail,
>MG-FTP etc. So, as far as anything to do with Nos, Snews, or Oasis,
>forget about STiK and anything to do with WWWxxx and vice-versa.
>So which are you trying to do? Then we can help!

I knew all that but in the NOSSHELL readme file it says it is a program
that allows you to log on with stick and use all stick related programs
but then it allows you to run NOS to get your mail etc,so not having to
make seperate calls. You have to rename NOS.TTP to something else then put
NOSSHELL which is renamed to NOS.TTP. This then should let you log on with
stik but when you run NOS.TTP NosShell runs first then NOS runs.This
should then let you do the online mail part.

I had it set up as it said but after logging on with Stik I ran NOS and it
went through the dial sequence and the modem wouldn't do anything when I
tried he mail commands. Perhaps it was just a bad day,I'll try again.

Anyone else using NOSSHELL that could tell me what to change etc ?

From: cgra@btmaa.bel.alcatel.be
Message-ID: <4j8rqs$8k2@btmpjg.god.bel.alcatel.be>
Source record: 148253

I have seen recommendations to mount drives either vertically or horizontally (and right-way-up), but not obliquely or upside-down (that was in the fitting instructions for a Seagate); and not to format a drive in one orientation and then use it in another (forget where that came from). In general the more recent the drive the fewer restrictions there will be: the market demands portability, or something like that.

5447. Atari STe and an old Harddisk

Newsgroup: comp.sys.atari.st
Date: 1996-03-26 00:00:00 UTC
From: mike@homer.fastnet.co.uk
Message-ID: <4j9uq6$rm@homer.fastnet.co.uk>
Source record: 148254

I have recently lent my old Gasteiner (?) 50MB harddisk to a friend with a 1040STe (I have an old 520STfm). It works perfectly on my machine, but he uses it it gives disk errors as soon as you run programs - it works ok for a while then louses up. Now I seem to remember there being a problem with Ste's when they were released relating to harddisks, but is this it and is there a patch for it?

I also had the same problem on another (520)Ste a year or so back.

Please can you email and replies.
Cheers...

5448. WANTED: New TOS version

Newsgroup: comp.sys.atari.st
Date: 1996-03-26 00:00:00 UTC
From: mike@homer.fastnet.co.uk
Message-ID: <4j9ve7$rm@homer.fastnet.co.uk>
Source record: 148255

I have an old (TOS1.02 I think) 520ST. I have also aquired the STonX ST emulator for Linux on my PC. Unfortunately the version of TOS on my machine does not seem to be compatible with the tos imaging program that you copy TOS to disk with.

Though I don't really want to spend too much money on buying a new version of TOS, I'm wondering if anyone can sell me a version of TOS (preferably 2.06, failing that 1.4) - I have lots of decent ST software (admittedly some of it quite dated) if you would rather swap.
- I'll send a list on reply.

Please email responses to me soon... I need to get my hands on an ST again!

Hmm...thats very interesting-are you sure about that? I'm asking because
when I installed TOS v2.06 in my STe, I wasn't sure either so I called
the CodeHeads (who were still in business at the time-also whom I
bought the chips from)...they told me -NO- that putting them in wrong
would not hurt anything-that the machine would merely refuse to boot-up
and give me a blank screen...(which is what happened) I then turned it
off, switched positions and its been working great every since. That
was in late '92/early '93...'Luck! :)

Ghostlink only allows the PC to be used as a slave device and not as
peer-to-peer.

This is used when you want to load something into an acc, such as a mod
into paula etc...If you actually do something that takes the memory and
doesn't give it back...such as increasing the size of a ramdrive FZD will
then not let you back into it and will crash.....I think what you may
need to do here is increase your buffer size.
I use 1000 lines and wrap when full...I find that the most useful set-up.
I use a 4meg STE I take it from the amount of memory release you have
that you are using at least a 2meg so the 1000 lines shouldn't be a problem.
Hope this helps
cya

Sounds like the power save feature. Does it stop after a regular amount of non use? It may pay to contact the manufacturer and ask them, plus if such a feature can be disabled.

P> Anyhow, my question is, does it sound like everything is ok, & the
P> worst I need to do is reformat the drive to take care of the bad

Hmmm, generally harddisks for laptops have to be built to take practically anything thrown at them abuse wise because of how they are used. It just sounds like a reformat may be all thats needed. So long as the bad sectors do-not increase with drive use then you should be safe.

Out of the ether, the following was mentioned by chriswil@southern.co.nz...:

c> Jeepers!! I wonder if it uses a 68040 at 40MHz bus/ 80MHz CPU clock
c> rates. That's the quickest I've seen 680x0 running at (Mac Quadra
c> 840AV does that maybe?). Or is it a 68060 at 80 MHz?
My Quadra 840av I owned never did that speed. Its 68040 did 40Mhz with I
think a 32 or 33Mhz bus but it did generate a hell of a lot of heat. I'd hate
to see the 16Mhz 68030 in the Falcon clocked anywhere near 80Mhz!!!!

It'd melt down after any prolonged use unless you used some major cooling.

c> Speculative stuff huh? Lets hope not...
I would still settle for a 68040 board at around 32Mhz with a level 2 cache
and fastram, that works reliably.

You can use the STe as both an Xterminal or the extra drive, with MiNTnet +
NFS, unfortunatly, both uses pretty much require a hard disk.

After reading this thread, I downloaded the latest version of BadMood, and must say I am impressed. I had downloaded some older versions quite some time ago, and at that time, it was rather unimpressive. Imagine my shock when doing just the above, and being greeted with the familiar E1M1 level!

All this is fine and dandy, but are there plans on bringing BadMood up from a viewer only to actual game-play?

Hi David,
It works fine, but only in high resolution (black&white).
All VGA monitors don't work, however. Some can't deal with the frequencies, but
if you use an SVGA monitor it always works.
I've made several adaptor cables, so I know for certain...

> fine, but....

Hi Peggy,
It doesn't work because the upgrade fom 2.0 to 3.0 is a big change and at the same time they exchange the dongle. You'll have to go to your Cubase dealer and order an upgrade there. They'll send the whole package (disks, manual and dongle) for an upgrade and you'll get it back all brand new. I believe that 3.0 has vanished and for the moment you'll have to upgrade to Cubase Score instead (or to Audio if you get a Falcon and want to make some HD-recording too).

Good luck!

Hi there,
I don't remember who told me, but someone claimed that the latest version of
Cubase Audio, which is 2.04, should be able to use the Fast RAM of the FX-board
to hold RAM- and Sampler-tracks. The older versions couldn't use Fast RAM at
all according to him.
I haven't tried myself, so I can't be sure...

If you were able to fit an Adspeed board into a Stacy, could you tell
me if the 36mhz 68000 (T-36) might fit as well (without the TOS upgrade)?
It is about the size of a playing card and about 1/4 inch thick. The 68000
pins are almost centered on the bottom of the card so an area that size would
have to be clear to fit. It can be raised somewhat with "extension" pins.
Did I ask you this before ? :).

Thanks

Mike

>
>Guess there's always STF ;-)

In the U.S., ST Informer is published, as of late, once a month :).
It is no glossy, but coverage of the current happinings in the U.S.
is documented very well and up to date. There is always a wide varity
of articles, good for beginners and advanced users alike. If you throw
out the rumors and nice color picts from the Euro mags (Mag) it matches
their quality quite nicely, and at a Fraction of the cost. European
coverage is included, if only a bit later than ST Format and Atari World.
It is most definately better than nothing at all. Subscribe now!

Current Notes has been revived in Canada. A little thicker than ST Informer
in paper, it too is a very well written and layed out magazine. Calamus is
still at it's heart, and it shows in the print. The rates for this magazine
are also quite reasonable when compaired to the Euro mags, which I buy
anyway, no matter what the cost, cause I love the color picts :).

If we don't support the people who support our machines, then we ourselves
will end up with out support.

Sorry for getting all mushy,

Mike

On the card at the show, a spot for a 72 pin 4 or 16mb simm is available to replace any cards currently used for ST Ram, ie, Falcon Wing, Ram Gizzmo, Wizztronics memory card or the standard Falcon Ram card. However, those cards may be used if you do not have a 72 pin simm by fitting them atop the Hawk. This will be 32 bit memory. I don't know what that will do for "ST" compatibility, but it sure as hell will make 030 code run nice :)

Ram for the fast ram card must be 72 pin, 4 or 16 mb, up to, last report, 64 mb.

Mike

> 'P'.

The problem is that there is no way to tell AHDI that there are more than 14 partitions supported when starting AHDI _before_ BIGDOS. XHDI compatible drives provide a mechanism which allows to change the driver parameters when the driver is already active. Nevertheless, concerning the number of partitions I don't see a way except starting the driver _after_ BIGDOS regardless of the driver you use, even if it is an XHDI compatible one. Or has anybody another solution?
When using MagiC (MagiC also supports more than 14 partitions) this problem doesn't arise because MagiC is active _before_ the hard disk driver gets started. But MagiC unfortunately doesn't support Minix filesystems...

Populous 2 and sim city work on the Falcon.
For the other games I don't know.

Yes there is a problem getting STE's working with hard drives.

Most of the early STE's were built with a faulty DMA-chip. This problem doesnt
show until you've had the computer turned on for some time, after a few minutes the
DMA gets hot and starts to screw up any data sent to the hard drive.That
means that while you still can read from th HD without problems, writing to it
causes a lot of problems.

Solving this problem can be done by replacing the faulty chip with one that works.

DON'T try this yourself unless you really know how to use a soldering iron.

The DMA-chip is a 40-pin IC and cost around 40 pound when I bought one last
year. I spent one hour soldering out the old chip and putting in the new one,
an experienced technican can easily do it in less than 30 min.

There is a different driver (an XLS) for MiNT.

MetaDOS should not need MiNT to run.

My boss owns a ATARI-ST1040FM, but lacks programs.

I own a PC with MS-DOS/WIN95 and i'm wondering if anyone knows a
way to get his machine running. You see, the problem is not getting
programs, but putting them on his machine. I could get the programs
for him, on internet, but i can't get them on his machine.

I don't know how the floppys on the Atari is formatted, but reckons
they're not like MS-DOS's formatting system.

Also, most programs on the internet are on the LZH-type, I thinks this
is one of Ataris packed-formats, like the Pc's ZIP?

IF the disks were compatible, how could I pack something out in the
first place, when there's no unpacking-program on the machine?

My boss also promised me a raise if I could fix this for him, so
PLEEEEEAAAAASE!!!!! HELP ME!!!!

Send your most needed knowledge to:

> I once found another Doom demo, but that one was about as slow or slower
> than Bad Mood..

Well Bad Mood v2.06 was released a few days ago. I have just downloaded and yet to test it but it will definitely be faster than v1.8/9 you saw.
It now has all textures fully mapped and an intelligent cacheing system to load the textures.

On a bog standard Falcon the first level of the DOOM.WAD (it also works brilliantly with the Heretic WAD!) shows some 4.7 fps but this can be increased to 6-7 fps without graphical loss using one of the options. Then minimise the screen using the '-' key and at around 2/3 of the normal screen you have a 12 fps Doom game for the Falcon !

A Falcon with an accelerator makes things really fly - especially as Bad Mood now uses 32 bit FastRAM to its full!

The 'other' Doom clone was probably from a French guy who has just released another version of his clone. He is quite a rapid coder (almost as prolific as Doug Little!) and has implemented some nice touches.

It does go to show that Doom for the Falcon is a reality.
Of course you can't expect to fly like a Pentium as it still has a (16 bit bus) 16 Mhz '030 at the heart of things.

You can get hold of the latest versions from :

o My Bad Mood web pages
o Johans FTP/Web site : rand.thn.htu.se/pub/BAD_MOOD/
o Or Bertrands FTP/Web site : pc60.gcr.jussieu.fr/Public/Bad_Mood/

If you think that you can contribute or just see whats going on then e-mail bad_mood-request@rand.thn.htu.se with the SUBJECT FIELD as subscribe

Simple!

Bye for now,

5492. Interchanging EZ135 cartridges between PC-MSDOS and ATARI

Newsgroup: comp.sys.atari.st
Date: 1996-03-27 00:00:00 UTC
From: "Dr S.G.K.Williams" <williamssg@cf.ac.uk>
Message-ID: <DoxLE3.6Ey@cf.ac.uk>
Source record: 148299

Can anyone tell me if it is possible (and if so how) to exchange data on Syquest EZ135 cartridges between a PC (running MSDOS/Win95) and my Atari TT. The PC formats the disks to 135MB, yet my Atari TT (using HDX5 and HDDriver 4.5) only formats them to 128MB. I can't seem to read a disk that has been formatted on the PC on my atari (and vice-versa). I'm sure its possible to exchange data between the two, provided either the disk can be formatted and read on the atari to 135MB.
Any help would be appreciated on this please!

Simon

5497. Freeze Dried Term

Newsgroup: comp.sys.atari.st
Date: 1996-03-27 00:00:00 UTC
From: nurmix@gateway.ecn.com
Message-ID: <4jb13f$snu@gateway.ecn.com>
Source record: 148304

I just thought I'd mention that I now have Freeze Dried Term running at 57600 bps at the serial port on my Falcon. Up until recently, I was using HSMODEM 6, and the Falcon version (SCC.PRG) doesn't allow you to re-map the "standard" re-mapping done by the author. And I could never get FzT to go over 19.2 before because with HSMODEM 6, you have to choose something like 75 baud or 150 baud - rates that are NOT available in FzT. But, I started using an AUTO folder program called FAST_SER.PRG combined with a CPX of the same name, and now it sets the port to 57600, and if I select 19,200 from within FzT, it is automatically re-mapped to 57600. This means that now I can take full advantage of my Supra 28.8 modem using FzT!!

If anyone wants this serial port patch, E-Mail me and I'll send it to you.

Paul Nurminen >>> Internet E-Mail = Nurmix@ecn.com

He probably only has a 720K drive on the Atari so format Double Sided Double Density disks on your PC to ensure optimum compatibility. If you cannot find Double Sided Double Density disks you could try reformatting a High Density disk at 720K but I have had limited success in that regard.

>Also, most programs on the internet are on the LZH-type, I thinks this
>is one of Ataris packed-formats, like the Pc's ZIP?

LZH is cross-platform but not as popular as Zip. There is an Atari Zip program (version 2.4) Or you can get LZH201M.TTP and Arcshell from an Atari FTP site.

>
>IF the disks were compatible, how could I pack something out in the

Better to keep the files packed, transfer them on a 720K disk (PC & Atari disk formats are the same), and unpack them on your boss's computer. Does he have a hard drive? If not, tell the old tightwad (sorry I couldn't resist-bosses are the same everywhere) to get one if he really wants to get with the times. He will need the room to run effectively. Call System Solutions in London (among other places) to get a hard drive.

>Anyone else using NOSSHELL that could tell me what to change etc ?

Well, hrm...
I'm the one who created this program!

According to my information (correct me if I'm wrong), the PPP protocol
contains the handling of a dynamic IP-address.
NOS handles this, if you set the IP to 0.0.0.0 or something.

I created 'NOSSHELL' to solve the problem with a dynamic IP-address,
when using a SLIP connection.

You have to disable the dialling part in 'STARTUP.NOS'.
STIK does the dialling.
'NOSSHELL' reads the IP which STIK posts in 'C:\STIK_CFG\CONFIG.SAV'
and inserts it in 'STARTUP.NOS'

Hi everyone , Why do you think Coca cola compagny spend $3 millons, to
make one commercial one the TV?
Do they need commercial?
Yes they do, or else Pepsi could be the leader, even if Coca cola comp is
internationaly know and appreciate. They're still doing commercial for
the reputation.
ATARi really sucks in business, not in computer or idea.
I don't understand their logical.
Atari still can work, but there's a lot of work to do, in business.
The fact that Atari sales the Jag at $99 is a mistake.
I hope one thing for the corporation. They sale the compagny to german, or
change the way they manage their product(commercial, availability of
product ..etc).
Bye.

>>>>
Hummm, the few times I have installed PROMS/EPROMS backwards
and turned on power to them, they never recovered. Reversing the power and
Grd on them is total destruction. Yes, I've changed hundreds, throusands of
PROMs and EPROMs and I can think of at least 4 times that I've put them in
backwards (Pin 1 to the wrong end) and not once has one been any good
afterwards.
If you just put them in the wrong socket (Even and Odd swapped) but
with Pin 1 correct, yes, no damage.

Hey Katherine,

I wish the ATARI-guys would think your way - in the mid-eighties they
were near to APPLE. And then they went out of ideas (it seems to me).

But don't expect them doing such reasonable things like fireing thad
grumpy old Tramiel-Guy, or even change theire management - no way!
They probably rather keep hold of the trademark (not even thinking about
selling) than doing what happened to AMIGA (getting succsessful
again).

Well, thank you for reading some sensible words about my favorite
computer, and MAYBE (who knows) those ATARIans might think it over ...
(ok, ok - just leave me my dreams)

All of them for using such language.

However, assuming that the meaning of "warez" has not changed in the last
ten minutes (from what I am led to believe, it's a sort-of slang for
"pirated software"), then the emotion expressed was correct, the language
was not. (Sorry to be such a kill-joy, but...)

And to all those seeking/storing/selling warez,

"GO SWALLOW A LIVE HAND GRENADE".

>14.4 seems a little 'slow'..

Oh, oh.....
Well, HSMODEM speeds the file transfer up. Furthermore it fixes a lot of
bugs in the TOS. And if you are using multitasking, then the processor
needs less time to serve the serial port. But for all this you need a
serial port with enough speed. If you are using the standard ST-port then
it's just impossible to get more than 1900 CPS.
I use 57600 on my serial port (now on a TT, earlier on a ST with
changed serial port) and have no problems to get more than 5000 CPS.
Well I use a ZyXEL-modem, but with a 14k4 connect 3500 CPS and more
is possible if the file to be transferred is a text.

There is a FAQ on how to do that accessible from

http://www.mcc.ac.uk/~dlms/atari.html

personally I have not tried it and am sure as you get more enthusiastic
about mint/mintnet you will likely want to make minixfs anyway.

k> Yes, I don't run it when I use Stalker on my 14.4 modem, and I get
k> downloads of 1800+ cps.

But you only really _need_ HSMODEM when sending data - That's the time that the modems buffers gets full and tells you to stop sending. Without HSMODEM your Atari is likely to miss that signal and suffer from CRC errors or dropped characters.

Yep, the AdSCSI for some reason is becoming maybe a better choice than the
newer "Link"s - at least compatability/percentage wise. My link II will
work with my original mac drive (LPS) but not the newer one (Maverick).
(actually bought for Mindbomb, but I couldn't get it running so switched 'em)

Hallo Richard,

RW>I tried copying the files of the METASYS in the C:\METASYS directory
RW>and then I put the CONFIG.SYS and the METASYS.PRG program in the
RW>C:\AUTO directory.

You need in your AUTO-Folder:

Metados.Prg
config.sys
HS-CDROM.BOS
HS-ISO.DOS
CDARGEN.BOS
HSMAY.DOS
ISO9660F.DOS
(some of the drivers you not nessessarely need)

For my Panasonic-CDROM at SCSI-Adress #4 the CONFIG.SYS is:

; CD-Tool BEGIN
; Note that everything up to `; CD-Tool END' will be erased by
; CD-Tool's configuration tool!
;
; created by CD-Tool 2.08, Mon Dec 11 21:43:08 1995
;
; devices
;
; SCSI 4: `TOSHIBA CD-ROM XM-3501TA' -> A
;
; BOS drivers
;
*BOS, c:\auto\hs-cdrom.bos, A:12
;
; DOS drivers
;
*DOS, c:\auto\hs-iso.dos -c16, P:A
;
; CD-Tool END

I am wondering is there a way on the Atari to combine (append) two files. I also subscribe to the USENET group that handles MIDI files and I downloaded one that came in two parts. I do have a program that uudecodes the file as long as it is one file, but NOT two. How do I combine these? Do I just use a regular word processor and make sure to save as an ASCII file?

>ST emulator running on IBM-compatible PCs. It doesn't give any details
>however. Can anybody tell me what it is called, whether it is PD or
>not, and where to get it?

all info from Darek's world wide web page:
ST emulator
Gemulator 4.15 is available immediately at an introductory price
of $199.95 U.S.complete, which includes the Gemulator card, the TOS 2.06 ROMs
pre-installed,and the Windows 95 and Windows NT compatible emulation software.

8bit emulator
PC Xformer 3.50 is now available at an introductory price of $39.95 U.S.

Gemulator Gold CD-ROM: The Ultimate Emulator CD
- Gemulator 4.15 for Windows 95 and NT with online documentation
- Gemulator 4.15 for Windows 3.1 and Windows For Workgroups
- Gemulator 3.02 for MS-DOS and OS/2
- Win32s 1.25 (for use with Windows 3.1)
- Gemulator device driver for Windows NT
- PC Xformer 3.5 with complete online documentation
- ST Xformer 3.0 (for use on the Atari ST)
- PC and Atari ST file transfer utilities for the Xformer cable
- public domain and freeware Atari 8-bit and ST software
Note: the Gemulator software requires a Gemulator card with TOS ROMs.
The CD contains not only English, but also French, German, and Dutch versions
of the Gemulator 4.15 emulator, as well as a special Windows 3.1 compatible
version. The older MS-DOS based Gemulator is also included for use on machines
not running Windows or with limited memory.
The CD will be released on March 23rd[1996] for $49.95. Existing owners of PC
Xformer3.x or Gemulator 4.x can upgrade to the CD for only $29.95.

Do you have access to a Internet BBS or Unix shell account? It's cheaper
and will work with any terminal program. It's not really that
glamorious, but I prefer more simple solutions :)

This sounds like the buggy DMA chip. There is a distinct chip number
you should be looking for. Unfortunately I do not know it. :-(

>I also had the same problem on another (520)Ste a year or so back.

Sure, just format a 720K(Double Density) on your PC and it should be read on a ST with no problems. Make sure that the files will all fit on the disk. Or if you can get the two computers hooked up with a null modem cable, try Ghostlink. The ST uses the PC hard drive as it's own drive :)

The first programs you should get are LZH and STZip archievers. Better yet, try to find DC Extract which is the best archiever for the ST. Or DC Sea which turns LZH and ZIP files into self-extracting programs on the ST. Hope this helps...

> files like

No, it's a link to gzip. When gzip checks its argv[0] and reads (g)zcat, it
behaves just like you invoked it by gzip -c or gzip --stdout, i.e. the file is
unpacked and written to stdout.

>
> laber.tar.gz:
>
> just use
>
> tar -xvfz laber.tar.gz
>
> This is not a shell script but an option of tar.

And less keystrokes.

> For gzcat you need something like a kornshell, or a bash.

No, you need a file system that supports links or you have to copy gzip to zcat
provided that argv[0] will be processed correctly.

You might be able to get more info on a PC newsgroup, as they probably know more about software available for their platform. I can't personally remember a version for PC, although you may be able to find some other more up-to-date, needing 16Meg RAM, a CD-ROM and a 2Gig Harddisk, PC RPG :)

>
If I remeber rightly some of the newer modems, like the Sportster have
```

a built in proprietry compression, that works only when connected to
the same type of modem, and does pretty fast compression. I seem to
remeber getting about 2000cps-2500cps with ASCII, but never over
1600cps with Binaries, big or small.

I wonder how you manage to supply 3000cps, with an unaltered port/OS,
thats = 24000bps, which is faster that the 19200bps of the standard
serial port - any chance of the AT codes you are using ????

I personally can't use HSModem with my computer, as TOS 2.05 is really
messed up, and flow control doesn't work. So I can use modem port 2,
whcih according to LISTPORT in STiK has upto 230400bps top speed !!!,
however not being able to manage the flow control, results in
corrupting of files on sending :-(

Anyone got any TOS 2.06 ROMS for sale ?? will pay upto 15quid ?

I'm pretty sure that almost all external Fax modems work pretty well
fine with the ST and upward. I seem to remeber there being a problem
with a sportster modem, soemthing to do with faulty ROMs.

With an unaltered modem port, ST and STe, cannot handle anything over
19200baud, so a 14400baud modem is the fastest you can use. However
the modification is pretty easy, and allows faster speeds with HSModem
6. TOS 2.05 won't work with HSMODEMs flow control, so higher speeds
are out.

Also features like Vioce, I'm not sure about, the software with the
modem, will have a PC comms program, and voicemail. I think Coma
supports vioce, but I'm not sure. You will however have to buy/get
your own comms, fax and voicemail program (I'm not sure the latter
exists ?) for the ST.

As far as my own modem: a Speed Com+ 14400 Data/Fax modem.
And it works fine.

>boot...
>
I'm not sure if this is jusy on a MegaSTE, but I would think it would
cover most STs, it may be possible that you need TOS 2.06 ???

on bootup pressing ALT key at just the right time, causes the
harddisk to be skipped.

You have to press ALT, just after the floppy disk bootsector has been
read and executed and the harddisk bootsector is being read.

Hope this works on your TOS version.

h> supplied with ICD, HDDriver etc.

The "formtting" on a new SCSI drive is low-level, Sid. In order to use the
drive, is must still be high-level formatted so that your OS knows where to
store things.

5540. IDE hard drive problems

Newsgroup: comp.sys.atari.st
Date: 1996-03-28 00:00:00 UTC
From: efac001@alpha.qmw.ac.uk
Message-ID: <4jdus5$i4d@epsilon.qmw.ac.uk>
Source record: 148155
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I am posting this on behalf of Steve Delaney as his Usenet bit in
Oasis is screwing up, so he can't post. Please reply to him via mail
(as well as in this newsgroup so that we vcan all benefit from the
knowledge :)

Here goes...

My Falcon's internal 65Mb IDE drive started acting up a few days ago and no
longer boots up. It is a Seagate ST9080A and now logs on as T9080A instead of
ST9080A when run run AHDI. The drive partitions appear on the Desktop but can't
be accessed. Trying to reformat from HDX results in the device being identified
as IDE 0 but with gibberish as its IDE information, rather than the expected
ST9080A and it complains about not being about not being able to reformat. In my
opinion, the manufacturer's identification and formatting info has been screwed
up. Does anyone know of any way to reformat the drive (I've given up the idea of
trying to recover the data!). I have all the info on heads, cylinders, tracks
etc, just don't know of any software which will allow me to re-write it!

Any assistance at all is gratefully received.

Thanks
Steve Delaney

This isn't a problem now folks. Atari no longer produces computers
The Atari clone producers are in control so start telling them what you want
the systems to do. But most of all support them by purchasing them the
machines.

I have a Golden Image external DS floppy drive for sale. This is the BMW
of Atari floppies, with a track counter, (useful for progrmmers, I'm told)
and can track out to 880 Kb!

I'm selling it for a friend, I wish I could keep it for myself!

$50 CDN + shipping.

Europeans may be able to use this, if you can get the proper power supply.
I'm pretty sure they were sold in England at one time.

Hello. No, you did not ask ME this before... .)
I surmise the answer is yes (to your question), but you may wish to
double check with someone such as Ray (at Toad Computers) who does/did
this work. According to him, even without the Adspeed upgrade the TOS
2.06 board upgrade is too thick/wide to place into the Stacy, as I
recall.

>Any ideas on registration price. I mean is it worth registering the ten
>pound now as I expect the new version is going to be more.

They are thinking along the lines of UK30 for the new version. IMO
it's worth more than that - coNnect is 30, cixcomm/cixread are 40
combined.

I don't know if there will be a preferential price for pre-registered
users but I do know that you won't lose out if you send them your
tenner. It's a good way of getting onto the registered users' mailing
list so that you find out about the full release of oasis2 the day it
happens.

Best wishes

Neil

Hi folks,

We have a slight problem with part of the WWW117 package. We really need someone to translate the English help files into German so the package is complete.

The important part are the three help files. Ideally three resource files need translating also but this is not essential because the translated help files can explain what the options do.

The translation required is not particularly technical and we estimate it would take between 1 to 3 hours. You will of course get a mention!

Would some kind soul care to volunteer to help us? :-)

Use HSMODEM, get rid of TOSFIX as it isn't needed when HSMODEM is installed.
Keep POOLFIX.

Is there a special version of NVDI 4 to run with MagicMac or will it run the same version as the ST? I have heard that certain graphics cards require custom versions of NVDI and wondered if this applies to Macs.

Thanks for any replies,

Michael

Make on the PC 4 partitions < 32 Mbyte, then you can use them with TOS >=
1.04 and MagiC

or

if you do not use MagiC, make 1 partition on the PC and install Big-DOS.
If your HDDRIVER is 4.50 get an update.

Source record: 148168

Hi all !

I'm designing a C++ framework to ease the development of computer emulators.
This framework is designed to be portable on many machines and O.S.
It will deal with 8,16,32bits emulated computers.

I'll use it to build my own Atari 520/1040STF emulator on PC.

If you are interested, let's have a look at my web page:
http://www.micronet.fr/~tenabis
(--> English version/computer emulation/TEC)

I'm a french guy, but my pages are both in french & english !

See you on comp.sys.atari.st or with email.

I did it and so can you. You have to format and partition them
first on the IBM for under 32 megs. You have to get software from Syquest
(it can be downloaded from their web page) and follow instructions to do
this. There is a bug in their program and you can only get two
partitions, but both computers will now read and write to the cartgridge.

Henry L Lazarus hlazar@netaxs.com

I'd be willing to take a look at the files. No guarantees, as my knowledge
of German doesn't include too many technical terms, but I could probably get
some help from a couple German friends if need be... :^)

Sorry this is not very clear. As I understand it if the full price is
set at 30 pre-registered users will be charged max 20 (allowing for the
10 they have already paid). A preferential price would therefore be
less than 20 for pre-registered users.

Best wishes

Neil

There are lots of programs on the Atari to do this! Those that
pop to mind are everest and ed_hak (or as it is now know edit plus) They
are text editors (and a lot more) make it real easy to remove the mail
headers out of multi-part uuencoded stuff after I append all the parts in
PINE and download it for uuedecoding on my system! Also good for slapping
them together after downloading them seperately.

5562. Atari Limited Offer@

Newsgroup: comp.sys.atari.st
Date: 1996-03-28 00:00:00 UTC
From: dpj@delphi.com
Message-ID: <Z-FLtNS.dpj@delphi.com>
Source record: 148177

TO: Atari Devotees at Large
FR: Earthbound Internet Inhabitant
(a.k.a. Don Thomas @ Atari)
REPLY TO: 75300.1267@compuserve.com or atari@genie.com
SUBJECT: *VERY* LIMITED OFFER (3/27/96 - 4/15/96)
AND WHILE SUPPLIES LAST
==========

As you may (or may not) be aware, Atari Corporation has relocated our corporate offices to a shiny new facility in beautiful downtown Sunnyvale, California. Now, it's time to move our warehouse facility to a location that makes more logistic and economic sense to our offices.

I am pleased to say that I have obtained Mr. T's and Mr. T's and Mr. T's (one T didn't need to reply) authorization to dig amoung the muck and find some worthwhile "stuff" for our long term friends and supporters on the Internet. I was told to "put aside what you (meaning me) think people might like and we'll consider letting you offer it on-line for a weekend or two". I've done that and have gotten approval to give away the items below at incredible prices.

Please, be advised that although these items are available at outstanding values, they are "as-is" and probably don't have boxes or instructions (all games probably have instructions although they may be photocopies). These are trade show returns, refurbs, store returns, reclaims, employee use items, media review returns, developer on-loan returns, etc. There are NO REFUNDS and the standard 90-day warranty will not apply.... BUT every item is guaranteed to work for a 30-day period or it will be replaced or repaired at Atari's option. Some of the items may have slight scratches or other small cosmetic packaging flaws. None are being sold under new conditions. All items are in limited quantity and subject to prior sale. It will be best to order by credit card so that we can adjust the transaction accurately if we are unable to ship everything requested.

Okay, enough with the protect my a$$ stuff here's how to order...
Send me an E-Mail to:

75300.1267@compuserve.com OR
atari@genie.com

OR fax the information to 408/328-0909. NO PHONE CALLS PLEASE on these items. You may also snail mail your order with a money order (or credit card) to:

Don's Wonderful Wacky Way Out Deal for Internet Dudes & Dudettes
c/o The Atari Corporate Company that moved recently
P.O. Box 61657
Sunnyvale, CA 94089-1657

Money Orders, MasterCard or Visa accepted as valid payments. Your order must include:

Name (First and Last)
Snail Mail (shipping) address
City, State, Zip, Province, Apartment, Tree, etc.
Day and night and weekend and holiday phone numbers
Internet address
Exact payment in Money Order form OR
MasterCard/Visa number and expiration

As a rule, shipping is $5 for every $100 (or fraction thereof) of your order, but you will be notified of exceptions. Foreign orders will have a modest surcharge for shipping.

So are you still with me? (By the way, all prices shown do not include shipping/handling and applicable California taxes). Oh, the quantities shown are for general reference. You do NOT have to buy that many. <g> Prices are all U.S. funds only.

ITEM 1 QTY INTERNET PRICE

Assorted Lynx Software a few of most titles Any 1 = $12 ($12 ea)
Any 3 = $33 ($11 ea)
Any 5 = $45 ($9 ea)
Any 10 = $75 ($7.50 ea)
Add identical title = $6.50 ea

Note: I can probably get my hands on most any title published by Atari with exceptions to the following: Blue Lightning, California Games, Checkered Flag, Electrocop, Gauntlet, Hard Drivin', Lemmings, Lynx Casino, NFL Football, Ninja Gaiden, Ms. Pacman, Paperboy, Roadblasters, Warbirds, World Class Soccer, Xenophobe or Zarlor Mercenary. Do not ask for third party titles... I ain't got 'em. <g> To see a complete list, visit: http://www.atari.com.

Note that no matter how many you buy, you get the second (or third, etc.) of the same title for only $6.50 each. This is for you ComLynx want-a-bees <g>.

ITEM 2 QTY INTERNET PRICE

Jaguar demo kiosk 10 $150 plus $130 S&H

These are the big, heavy suckers we take to trade shows. The ones I can sell are trade show returns and may have minor flaws (like a little sticky tape that comes off with lighter fluid). You have to

provide the monitor and the Jaguar. If you have seen these things, you know how much fun it would be to own one. Perfect for bedrooms, rec rooms, the garage, or in the lobbies of professional offices where children could be entertained. If you haven't seen these things, then picture a cabinet that looks just like an arcade machine. Convenient shelf for small monitor and there's room for the Jaguar AND the CD-ROM.

ITEM 3 QTY INTERNET PRICE

SC1435 color monitor 12 $95

Yes, they work!, but there's only a few at this price!

ITEM 4 QTY INTERNET PRICE

SC1224 color monitor 24 $65

First come, first serve.

ITEM 5 QTY INTERNET PRICE

TTM195 9 $175

These are virtually impossible to find anywhere...

ITEM 6 QTY INTERNET PRICE

PCM124 29 $95

You know you want this. <g>

ITEMS 7 - 10 QTY INTERNET PRICE

Lynx pouches couple dozen $4
Lynx carry cases another couple dzn $10
Lynx battery pack okay, a lot $4
Lynx power supply not as many as a lot $4.50
Deal of deals... $6 for power supply AND battery pack

ITEM 11 QTY INTERNET PRICE

Lynx with 4 (random)
games hmmm, about 100 $45 each / 2 for $80

ITEM 12 QTY INTERNET PRICE

Atari binders much too many 1 = $2.00 ($2.00 ea)
3 = $4.00 ($1.33 ea)
5 = $5.00 ($1.00 ea)
10 = $7.50 (.75 ea)
25 = $10.00 (.40 ea)
50 = $15 (.30 ea)

Don't laugh, these are cool 3-ring binders; all in great condition.
All from the Warner days.

ITEM 13 QTY INTERNET PRICE

Falcon computer (US)
4 Meg RAM plus
hard drive bracket.
IDE drive not included 6 $250 plus $15 S&H

ITEM 14 QTY INTERNET PRICE

Falcon computer (UK)
4 Meg RAM plus
hard drive bracket.
IDE drive not included 4 $450 plus $45 S&H

ITEM 15 QTY INTERNET PRICE

Falcon computer (German)
4 Meg RAM plus
hard drive bracket.
IDE drive not included 5 $450 plus $45 S&H

ITEM 16 QTY INTERNET PRICE

TT030 computer
2 Meg ST RAM &
4 Meg TT RAM,
50 Meg hard drive 21 $250 plus $15 S&H

ITEM 17 QTY INTERNET PRICE

SF354
Single-Sided Drive 45 $18

great for classic 16-bit computer games or applications

ITEM 18 QTY INTERNET PRICE

SLM804 laser printer 8 $125

great as second or for parts, may be missing drum

ITEM 19 QTY INTERNET PRICE

XM304 8-bit modem 63 $4

Common' get one just to say you have one. <g>

ITEMS 20-23 QTY INTERNET PRICE

Portfolio:
Smart Parallel 83 $5 each
PC Card Drive 61 $5 each
64K Memory Card 400 1 = $12 ($12 ea)
(batteries may be 3 = $27 ($9 ea)
knoorknob dead) 5 = $35 ($7 ea)
10 = $50 ($5 ea)
25 = $88 ($3.52 ea)
100 = $99 (.99 ea)

Have fun and enjoy. If I find more of something, I'll see what I can
do.

Permit me to repost a message from (i assume thee) Don Thomas at Atari
which was posted over in r.g.v.a, hidden among a long list of items
(clearing from the old atari warehouse) was this entry...

ITEM 16 QTY INTERNET PRICE

TT030 computer
2 Meg ST RAM &
4 Meg TT RAM,
50 Meg hard drive 21 $250 plus $15 S&H

... a helluva bargain, I wish i had a spare wad of cash at the ready/
room for another atari (family o' em already)

Anyway, the message said reply to Don <75300.1267@compuserve.com>

Check out the message in r.g.v.a titled "Limited Time Offer..."

---Andy

(Note: I have nothing to do with atari or the validity of the original)
(: post... so, if its a hoax, don't flame me to kingdom come)

Consider this a repl(a)y and I will 'gif' you a dictionary once
I've found mine. Haven't seen it in Eons now.
How are you getting on with forming fidonet ?

But seriously, _what_ are you trying to test: fidonet, usenet,
your modem, ever`e'body here, or just your damn *spellchecker* ?

From: nurmix@gateway.ecn.com
Message-ID: <4jfpso$e5d@gateway.ecn.com>
Source record: 148181

I don't know whether or not this is true, but an Atari-using friend of mine, who is on GEnie, said that he saw a post that Atari Corporation is selling off it's remaining inventory of 4meg Falcons & TTs for $250 each!

Apparently, if you want more information, you need to contact Atari or Atari Explorer On-line.

Please don't E-mail me with questions, as this is ALL I KNOW ABOUT IT...

AFAIK it puts binarys into ASSCI. Okami has an option built in to save a
certain message as uudecoded. From what I've heard most offline mailreaders
have this option.

Sander.

is there a patch for it?

Find out if your DMA-chip (U300) has the part-no. C025913-38A. If so replace it with the correct chip C398739-001 (STE-DMA chip). Soldering required.

>
>So which are you trying to do? Then we can help!

Ignore that - that's pre-nosshell :)

Right what you're doing wrong is logging off with stik.

1st thing to do is load startup.nos into a text editor and delete "dial
sl0......" line.

then

Log on with stik as normal, then select internet, logon from oasis, if
you've set up nosshell as described, then NOS should pop up. type ip ad
[return] and the value of the dynamically allocated IP address stik read
should be returned to you. :)

Simple.

Use NOS as usual typing SMTP K for sending mail POP K for reciving
(assuming you're using NOS_POP3) and NNTP K to do news. :)

Let us know how it goes. :)

Yours etc.

David.

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
----

* You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
----
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]
Connected to caramba.cs.tu-berlin.de.
----

* It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
----
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.

___

Example:

```
ftp> cd Music/ [MOVE TO DESIRED DIRECTORY]
ftp> bin [SET TRANSFER MODE TO BINARY]
200 Type set to I.
ftp> ls -l [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]
150 Opening BINARY mode data connection for /bin/ls.
total 4624
-rw-rw-r-- 1 ftpadm atarimod 3409 Feb 19 12:48 00INDEX
-rw-rw-r-- 1 ftpadm atarimod 37419 Mar 18 1993 50play12.lzh
-rw-rw-r-- 1 hesche atarimod 105936 Jul 24 1995 525_v211.lzh
-rw-rw-r-- 1 ftpadm atarimod 168363 Mar 10 1993 accomp25.lzh
```
---

* If you want to go back one directory:

cd .. [GO BACK ONE DIRECTORY]
cd /. [GO DIRECTLY BACK TO ROOT DIRECTORY]

_____

[3] Downloading files
==========
get filename (i.e: get letemfly.zip) [GET FILE]

Example:

```
ftp> get setseek.zip [GET FILE]
200 PORT command successful.
150 Opening BINARY mode data connection for setseek.zip (3825 bytes).
########
226 Transfer complete.
ftp>
```

Several files at once:
---
mget filenames (i.e: mget ao.lha xyz.zip ps.txt) [GET SEVERAL FILES]

Example:

```
ftp> mget silkmous.zip snip.zip [GET 'SILKMOUS.ZIP' AND 'SNIP.ZIP']
mget silkmous.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for silkmous.zip (22086 bytes).
##########################################################
226 Transfer complete.
mget snip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for snip.zip (17852 bytes).
#####################################
226 Transfer complete.
ftp>
```
---

* You can also use 'wildcards' to ease the whole procedure of typing file-
names correctly:

Example:
----
ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
####################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
##
##############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
##
226 Transfer complete.
ftp>
----

* you can also use a 'wildcard' to get hold of single files or a specified
selection. Just be sure the wildcard is unique.

i.e. if you want to download 'stzip26.lha' and there are no other files which
start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single
command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this
file or not, you can use the command 'prompt'. FTP will then proceed to get all
the files that match your wildcard without asking if you want them.

Example:
----
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>

___

```
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
---------------------------------------

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:
---------------------------------------
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
---------------------------------------

* When doing a 'close' and re-entering a new FTP site you won't have to set
up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then
restart FTP.

>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
========================================
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
=============================
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands
------------
! escape to the shell
$ execute macro
account send account command to remote server
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
```

```
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
rename rename file
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
```

```
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).

_/_/_/
```

(i.e: mdel a:ftplist.txt)
eject [EJECT DISKS FROM DRIVES WITH NO 'MANUAL EJECT BUTTON']

Re-distribution allowed as long as nothing is altered or omitted.

5580. *.WAV to *.SDS (Sample Dump Standard)

Newsgroup: comp.sys.atari.st
Date: 1996-03-28 00:00:00 UTC
From: bjr@EbiCom.net
Message-ID: <4jdnrs$sph@Einstein.ebicom.net>
Source record: 148351

Aloha,
I'm looking for a piece of software that will convert a
standard 16 bit PC WAV sample into the SDS (MMA Sample Dump Standard)
format. It doesn't have to be able to transmit it over MIDI...just
trying to get it to a format on disk that GenWave can understand.
I've tried Sox...and 525...neither of these packages will do
SDS unless there is some late version that I've yet to discover.
Any help would be much appreciated...
Thanks,
Brian

5581. Re: Hawk 030 Prototype was at Sacramento!

>

Hi,
I'm not qualified to quote all that Steve said about the card.
A lot of it went over my head. It does however look like the card will
actually make it to market. Steve had said they were funded for the
complete year (they are owned by a larger company).
I have made more than a few calls for way more than a few hours to
Wizztronics asking (begging) for information. Soon is the key word.
From what I gather, and this could be construed as rumor, the Hawk is
the first step to another machine. It is designed to accept additional
hardware that is intended to be available on another system that they
are (actually have) working on. The reasons for the delay in the release of
the Hawk and the other products is not entirely Wizztronics fault. When these
"other" matters are resolved, and the planets are in alignment, we may see
some very interesting hardware. Time will tell. Be ready to hock all your
worldly possessions, cause it ain't gonna be cheap.

Anyone want to buy a 1974 KX 450, fully restored and powder coated :)

Mike

5582. Re: Combining files...

>save as an ASCII file?
>

Yes , thats right.

Some OLRs and terinal screens will offer the opportunity to
append\overwrite\cancel files if an existant file is selected in the
Save\Extract file selector,(ie OASIS, CoNnect) and I personally have
had occasional problems with both esscode and uucode10 trying to
deal with uu series files(*.uua,*.uub,*.uuc etc) They are both however
supposed to handle these files.

A text editor like Everest is my prefference for the job.
However lobbing them all into Everest in the right order ,topping and
tailing them as you go along, merging the whole thing, saving as *.UUE
usually\always works for me.Just dont leave any gaps between blocks.
It is a bit of a PITA but it's effective.

There again, Everest will have problems if the file size approaches
your available memory limit. I'm not sure what size Midi files run at
but if its come as 2 usenet articles it'll be fine.

BTW Oasis2 has multiple uucode\decode built in :)

Good luck and hope this has been of help (and correct!)

I think there is a program called Ghost Net, that will allow you to
network your Atari ST with your PC and send the files at high speed from
one system to the other over a serial cable.

I have used it on my TT/030 & AST PC. It works great.

If you need a copy just ask, and I will send it to you.

The only way I know of doing this is to save it as ASCII from within
Signum (supported in version 2 at least) and then import this into your
WP. It does mean you loose all formatting though. Which WP were you wanting
to import them into?

Christoph Michalke (michalke@sun2.ruf.uni-freiburg.de) wrote:
: Has anybody experience in converting Signum 2 Textfiles (with footnotes!)
: into any IBM PC format (Wordperfect 6.1 for Windows preferred, but
: tex, latex, dvi, word, ... would be ok too)?

: Additional question: Where can I find information about connecting
: a HP Laserjet to an Atari ST with Signum 2 and about the needed fonts
: (.L30)?

Application Systems who wrote Signum still exist (I'll dig the address out
when I get home - it's somewhere in Heidleburg) and have a program which
does just that. It replaces p24prn.prg/sprint.prg and drives HP Laserjets,
Deskjets or Canon laser printers. I got my copy from the UK distributors
(Signa Publishing) for about 10 UK pounds before they went broke.
As for fonts, they do have the extension L30, and the pack comes
with the standard 15 or so fonts. I seem to recall further ones being
available on either umich or hensa.
I hope this helps. I'll post the address when I find it (I had to
write to them to get a driver for my Canon BJ230).

I have seen several posts recently about upgrading hard drives.
FYI, I found an excellent source for reconditioned hard drives.
I bought an ST3600N for $149, and it works great in my ST.
It is a 525 MB 3.5", 1/3 height drive. Much cheaper than anywhere
else I could find. They have a whole selection of SCSI starting
from a 40 MB conner for $29!
I have no connection with the co., but you can find their
current price list at http://www.internet-cafe.com/hi-tech/
Just in case anyone needs one.

> viewer only to actual game-play?

There sure is !

As the Bad Mood project is spread across the internet people work at different
rates on the different sections.
The main section is the engine which is almost complete now - and it looks
gorgeous !!

Other sections people are working on include :

the aniti ghost routine (walls, doors collision routines etc.)
AI of the monsters/characters
Networking with other Bad Mood users and even the chance of PC/MAC people.
Sound/Music
CD pressing to distribute it with millions of other WADs and a ...
Funky Intro sequence worthy of the game ...

There may be more stuff that I've forgotten but it should look and play like the
PC Doom at a respectable speed, after all the entire engine is running on
virtually the DSP chip now !

This is the name given to a DOOM-type software package that runs on the
FALCON. You can use the maze/bad_guys/monster game files (called WADs)
from those made for DOOM, DOOM II, and HERETIC with this clone.

If you have SpeedoGDOS you should have an STFAX driver. There also is an IMG driver if you wanted to import into Pagestream for some reason. The Speedo etc. drivers are in the STFAX folder somewhere. Not sure what you do if you don't have Speedo - I don't think NVDI has one but I haven't really hunted yet...

: use with an ST (megapaint and Calamus) Will any scanner work??

If you're talking about a hand scanner, MiGraph/Touchup package is made for the ST - it plugs into the cartridge port. Touchup is nice not only for scanning but cleanup and preparation for Calamus or whatever. There are a lot of them available used - I would think somebody might have one in your part of the world. (you don't *have* to have Touchup - there is some shareware scanning software - but it's nice). Toad I think still carries the monochrome and color scanners new. For flatbeds, GTLook software is available for most of the Epsons which you can use with SCSI (ICD Link).

(I have a MiGraph ColorBurst I'll part with but it's for the Falcon - not sure I want to let the monochrome one go although I haven't used it since I bought my flatbed. Wonder how much shipping would be to Australia 8-)

: >Most of the early STE's were built with a faulty DMA-chip.

Actually, it's not 'faulty' per se. The C025913-38 was the chip used in the STf/m machines and it performed very well in those machines. The Ste machines are noisier electrically and have to use the TT DMA chip. Or so I was told when I was investigating why my HD was losing partitions on bootup. This problem also went away when I installed the 'right' chip.

: Open up your STe and check out the number on the DMA chip.

: ** Faulty DMA chip in early STEs;
: C025913 - 38 PH23 - 001A

: ** Good chips (most STEs);

Clap, clap, clap! Folks, we now have something no other computer userbase has-
a variety of computer hardware manufacturers setting standards, and a variety
of OS sources, including MagiC, Geneva, etc. - all of which are TOS relevant!
The "power" is now in our hands, not in Tramiels', it hasn't been in theirs
since 1993. If TOS cannot remain viable, it's because we aren't buying
products to support it, and encouraging developments in directions we want
by voting with our dollars (or marks, pounds, yen, and rubles) :').

The trouble is not the company itself, it's the owners at the top, they never have been any good. I've seen the few t.v. ads for the Jaguar, the 1st one was ok, but the last one to be seen was just stupid and it turned OFF and away more buyers that might have picked up a jaguar. And there never was any t.v. ads for the falcon at all, it's like they build a good ship for sailing in, but they leave out the floor and let it sink, then they blame it for sinking.

If either JT or ST realy had any good ideas for selling something, they wouldn't know it!

You need a simple SCSI2 to 50Pin SCSI-Kable.
www.toad.net / Misco

> Does anybody installed sucessfully a 1.6GB 3.5" IDE internal HDD and
>powered it up from the Falcon's small power supply? What about the new
>bus cable?

You need a 2.5 to 3.5" Adaptorkable.. I think you must ask toad.. :)
Don't connect this 3.5" Drive to the internal PowerSupply!!!
This PowerSupply can't support +12V !!
You only have the chance to support +12 and max. 150mA!!!

Use a extra PowerSupply for ANY 3.5" Drive!

You can build you internal 3.5" bus-kable by your self (flatkable with drive plugs)

> Do you trust pumping up the Falcon's clock to 32MHZ? compatibility?

Use the FX-Board... Nice an easy.

regards

Howdy. I think you got some info from others, here's my 2 cents
worth:

GA> Also, most programs on the internet are on the LZH-type, I
GA> thinks this is one of Ataris packed-formats, like the Pc's ZIP?

Yes, you have the right idea. If you can find an Atari LZH packer,
use that. If the file ends in TOS (like, LZHPAC.TOS or whatever)
then it will be a self-extracting file, and your boss can simplely
run the file, and it will unpack itself into the LZH files. This
solves your problem, of how to get a packer program, when you don't
have one! :) :)

richardw@dma.org barked in U.comp.sys.atari.ST on 29 Mar 96:

r> Hi! I just recently bought a single speed external CD Rom drive for my
r> STe computer (the price was right at $35). Here is my configuration:
r>
r> Atari 1040STe - 4 megs of RAM
r> Atari Megafile 30
r> 100 mb SCSI external hard drive
r> Single Speed CD ROM drive
r>
r> Well, that is an abbreviation of the hardware I have on it. The
r> question I have is, how do I make the CD Rom able to be recognized by
the
r> STe? I tried copying the files of the METASYS in the C:\METASYS
r> directory and then I put the CONFIG.SYS and the METASYS.PRG program in
r> the C:\AUTO directory. NOTE: Metasys may be another name, I forgot it
r> off hand. It just says that it doesn't recognize the unit. HELP!

You need ExtenDOS. I beleive Toad still sells it - if not, Roger Burrows (the author) hangs out here, he can tell you where to get it. Also, you didn't mention what kind of host adapter you're using. That makes a difference, too.

Hi there,
I hope you're not planning on running Cubase Audio - it doesn't work at all with 040 CPU's. Not yet anyway. I hope it will soon - I'm planning on either AfterBurner or Barracuda (whenever IT arrives), but my main concern is Cubase Audio compatibility. I guess I'll have to go for a Hawk when it hits the market...

Best regards,

Claes

> appreciated on this please!

Hi there,
If you use normal partitioning, there is a magic borderline at 32MB.
Up to 32MB the PC and Atari HD-partitions should be exchangable -it has something to do with sectors, size of sectors and such things and up to 32MB they should be compatible. Just test by partitioning the EZ-disks to several partitions of max 32MB each and it will probably work. Another way is using BigDOS, which should be able to use PC-partitions up to 1GB or something like that. I haven't dared trying yet, but I will some day...
Maybe someone else knows more about BigDOS?

Best regards,

Claes

I discovered that under MagiC Mac on my Quadra, that the PC formatted cartridges are available to MagiC on the SCSI bus. Kobold warns that it is a different format, but will read and write anyway. This was using V1.2.5 of MagiC Mac.

Mike

5635. New Atari/Falcon Yellow Pages!

Newsgroup: comp.sys.atari.st
Date: 1996-03-29 00:00:00 UTC
From: afn14016@freenet.ufl.edu
Message-ID: <4jg490$o2m@huron.eel.ufl.edu>
Source record: 148196

Hi friends:

I decided to create The Atari/Falcon Yellow Pages to help us find a more organized way (I hope) to find out what is available for Ataris. what is a must have list of programs, where to get them when comercial and links to sites where you acn get the programs directly from the Y.Pages. Also a description of both the sites and the programs!

The pages are growing so it will get better. While you at at it you could get to my flute and guitar pages and listen to samples from my new CD soon to be released in Habana (tape available now)

The Atari/Falcon Yellow Pages at:

http://www.afn.org./~afn14016/

I hope you like them!

5638. Ease 4 loading delay

Newsgroup: comp.sys.atari.st
Date: 1996-03-29 00:00:00 UTC
From: andrew@ajrose.demon.co.uk
Message-ID: <828181958_OASIS_@ajrose.demon.co.uk>
Source record: 148199

Since I upgraded to Ease 4 I've noticed there's a 5 second (approx) delay during loading or reloading the desktop where all disk activity stops and the mouse pointer remains an arrow rather than the busy bee which comes and goes during the rest of the loading time as accessories etc are loaded.

This is something which never happened with the previous version of Ease, and almost doubles the time taken to reload the desktop.

Has anyone else noticed this, and is there a rational explanation or cure?

Andrew

5647. Problems with HD Driver and Minix FS

Newsgroup: comp.sys.atari.st
Date: 1996-03-30 00:00:00 UTC
From: samy@interlog.com
Message-ID: <4jikj4$lg5@gold.interlog.com>
Source record: 148058
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hello all,

I finally got my package from Toad with HD Driver and Pagestream. I like
'em both.

I am having a problem with HD Driver, though. My minix file systems
appear empty under MultiTos (aes 4.1), Mint/XaAes, Mint/Normal TT AES
but are just fine under X or with just a shell from bootup. I am
using MinixFs 0.6pl11 and the latest patched mint 1.12.

The HD Driver version I received is 4.52 which I gather is already
out of date. Is there an easy way to upgrade.

Has anyone else had the same problem? BTW, the Minix paritions
are about 100meg each and the type is "BGM". I would like
to change the type but the ICD formatter claims it was not formatted
by the icd utils (although it was) and refuses to change partition
type (side offect of minit?) and edge does silly things with
the numbering of sectors (actually ICD does) and I remember
almost destroying a partition before cuz ICD claims partition
starts at sector 2 and evrytime you do anything in edge's parition window
it puts the first sector at 1.

Is there a utility to just change the type because I am curious if
changing them to "RAW" would fix my problems. ANyone know fer sure?

More details...

Running on a TT, TOS 3.06, SCSI (not ACSI) and partitions are
on a Maxtor 7213 (drives f: and g:)

Any help would be appreciated.

Once this is resolved I'll get to networking my TT and my new Pentium 133
thru the high speed serial ports (has anyone tried this with MintNet yet?)
I figure the TT will be the server and the PC will connect thru the TT since
the PC has 2 serial ports and the TT has 4!

Thanks,
Samy Mesbah

Hi friends:

I decided to create The Atari/Falcon Yellow Pages to help us find a
more organized way (I hope) to find out what is available for Ataris.
what is a must have list of programs, where to get them when
comercial and links to sites where you acn get the programs directly
from the Y.Pages. Also a description of both the sites and the
programs!

The pages are growing so it will get better. While you at at it
you could get to my flute and guitar pages and listen to samples
from my new CD soon to be released in Habana (tape available now)

The Atari/Falcon Yellow Pages at:

http://www.afn.org./~afn14016/

HREF="Follow this link to get there now!"><http://www.afn.org/~afn14016"></A>

I hope you like them!

> p> to have been a long time since it was first annonuced, and still
>
>I hadn't realised that it had been announced... i just thought it was up for
>discussion... :|

It sort of was 'proposed' about 6-8 months back, and has been
discussed for quite a while, I thought someone was sorting it out and
trying to arrange it ??? I wouldn't know where to start or who to
mail, so theres not much I can do to help other than sit here and make
suggestions :(

>
> p> there are too many adverts for sales/buys/swaps on this newsgroup !
>
>Yeah, some from myself! Naturally as soon as marketplace is made available I
>will post in there instead. Maybe the idea you mentioned above could be
>posted in there on a weekly basis just to remind and inform everyone?

That fact there are 'too many adverts' is not your fault at all, there
is no specific newsgroup for your mail, and so understandably it is
posted in this group, nothing wrong with that.... I would just like to
see a newgroup for this growing number of ads !

I could quite easily post the reminder article once a week if you
like. The people who wouldn't read it are those who are new to the
group, but as with all groups, they'd catch on !!!

ATb.

Compo UK haven't answered any mail for the last fortnight.
They have gone bust and the recievers are in.
Atari World went down with the ship.
All this IMO etc and please correct me if this dreadfull info is
wrong. I would be very happy if it was not true.

Maybe you could assertain whether Compo on the continent will support
the UKs hard and software?

Sorry to have to tell you Hallvard :(

A couple of points:

1) This is really an advert for your flute and guitar pages, otherwise you'd point us all straight to the URL for the yellow pages, rather than the page with a link to them. Some people might have a small problem with this (but not me:-))

2) It's a pretty slow site to access, especially from over the water. Is there any chance of offering a text-only fast site. I got as far as the first page of your yellow pages and didn't have the stamina to go on....

Plus a small question (cos I didn't get there):

The samples: what format and how big are we talking here?

Hi!

Usenet, email, ftp can all be used on a PPP acount using Oasis v1.35. It is just the www that needs SLIP -as STiK *currently* doesn't support anything other than SLIP..
Oasis 2 is due **very soon**. As is Spider, the www browser that will come with Oasis2...

btw, this is my first time on Usenet-so sorry if I've posted old news.. :)

Thanx,
Ste

Unfortunately, in light of recent developments, don't expect a reply. I am still awaiting a response to my phone calls to Compo. And everyone else is as well I think.

In case anyone doesn't know yet, Compo UK have gone into receivership, and it's all a bit sad really :-(((

Just out of interest... what about partitioning ???

If I do get a 1Gb drive, can I have partitions of a resonable size ???
I don't want to get a 1Gb drive and find the mximum partition size is
16Mb, and so only be able to use 14*16=224Mb wasting a lot of drive
space !!!

Nb. I have AHDI 6, will this allow bigger partitions ???

Thanks for the previous response, and thanks in advance for any
response to this.

That isn't true, virtually all Demon subscribers on Ataris (such as
myseolf) are using PPP, give NOS a go-available from any good FTP
site.

>and timed out because there's no '?'. Is there a command/instruction that
>tells the script to accept the next character as a place holder, it would need
>to be a wildcard like ? or *, and then execute the $GET_IP? Here's an example:

hmm isn't it the sm1 206.14.40.2 you want to grab and not the sm_ppp
bit? It looks from above that you use the sm_ppp one if you want a ppp
access whilst you use the first one if you want a slip access?

try
FIND = sm1
RESP = $GET_IP
and see what happens
make sure you have specified the DNS (nameserver/provder) correctly in
your default.cfg file as well.

The Dungeon Master people have just released "Dungeon Master II" for the
PC. It has some new enhancements, but basically it's similar to the
original.

I don't know if the original was ever released for the PC though.

I have MagiC4 on my Falcon, and use the 'GDOS' within NVDI3.
Can't tell you about the printing, yet, as I've only *just* got myself a
cheapy printer and havn't had time to try it with anything other than
text files..
Though I should imagine it depends on your spooler.. Have you got GEMSPOOL
for your Atari?

Steve

Source record: 148087

Phil

As far as I know Dungeonmaster is not available for PC, but Dungeonmaster 2 is, in fact if you want a copy I've got it on CD Rom if you want it...(give us a tenner and I'll send you it). I've already completed it on Mac format + I picked this version up cheap from a show. You do need a sound card for it to work properly though. I agree DM was the best game ever and i spent months playing it and never got bored. DM 2 is just as good, but a little harder. Did you ever play Chaos Strikes Back, that was a real bitch! Hope this has been of help,
all the best

5677. Atari HW and SW still available (update)

Newsgroup: comp.sys.atari.st
Date: 1996-03-30 00:00:00 UTC
From: Timothy Miller <millert@csee.usf.edu>
Message-ID: <Pine.SUN.3.91.960330145015.11759B-100000@grad>
Source record: 148088
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have the following Atari-related items not yet accounted for. The
figures given are either what I would like to get. I have had offers for
some of these items, but I'm looking for more than what I've been given.

Hardware:

Atari Falcon030, 4 meg RAM, 85 meg HD $800 OBO
(comes with Geneva and Neodesk)

Books:

Several books in the Abacus series, including Atari ST Internals, $15 for all

The Atari compendium, $30 OBO

Software with packaging:
(Make an offer for the whole lot or for individual items. Items are
grouped into the units that I would like to sell, but it's not carved in
stone.)

Universal Item Selector III $15

Word Up $15

GST Macro assembler, version 1.0 $5

Orbiter $5

Lattice C, version 5.5 and 5.6 $100

Assem Pro $10
Laser C, version 2.1 $20

Just disks: (make an offer for the whole bunch)

ECO
Populous
Populous The Promised Lands
Silent service
Millennium 2.2
Sundog
Lisence to kill
Michael Jackson Moonwalker
The Real Ghostbusters
Tempest
Degas

Hello there,

the latest version of Gemview is 3.16. Yesterday I've downloaded this
version from "ftp.cs.tu-berlin.de". I don't know yet how it differents
from the previous version.

> Thanks in advance for your input!

As sm_ppp implies PPP is involved then shouldn't you be using sm1?

As far as I'm aware there is no way of actually reading this format
but the following horrendous bodge may work for sm1 if the "1" keeps
changing as well ...

The upper 16 bits are assigned to your provider, the lower 16 bits
change so this *might* capture the important part

FIND = 206.14.
RESP = $GET_IP

After log on select the "other options" and in the IP address field
you should see "40.2" (the dynamic part). You could now put the
fixed 206.14 part in front of it manually.

[I did say it was horrendous!] :-)

but even this can't be tried if you *really* do want the sm_ppp part
for obvious reasons. :-(

Quite correct on all accounts. I'm grabbing stuff via anonymous ftp
through an Internet shell account. That chucks stuff in my home directory
on the net server I connect to. I then 'sz' (send zmodem) the files to my
Falcon at 14k4 (57k6 compressed). Sometimes with text I get crazy cps
rates as you will have read :-)

>programs!
>
> The pages are growing so it will get better. While you at at it
> you could get to my flute and guitar pages and listen to samples
> from my new CD soon to be released in Habana (tape available now)

A couple of points:

1) This is really an advert for your flute and guitar pages, otherwise
you'd point us all straight to the URL for the yellow pages, rather than
the page with a link to them. Some people might have a small problem with
this (but not me:-))

>>>True, I have put a lot of work in learning to write HTML withou help
or books. I also put a lot of work and money and time into recording this
album. so a little help is needed and appreciated specialy from Atari
friends.

2) It's a pretty slow site to access, especially from over the water. Is
there any chance of offering a text-only fast site. I got as far as the
first page of your yellow pages and didn't have the stamina to go on....

>>>Well I was not aware of the time difference as it seems fast here.
about graphics, I do not have any on the following pages and one
repeated gif that is axactly 1375b! that should not make a
significant diference on the Y.P's

>>>The flute and guitar do have graphics and for that CAB gives the
option of turning off graphic display.

Plus a small question (cos I didn't get there):

The samples: what format and how big are we talking here?

>>They are WAV and no longer than 563218 about 30 seconds at 20kHz 8
bit mono. The original is 50kHz 16 bit stereo. I do not feel happy
about the speed but that about all we can do in our time.

I created the pages to help all and instead of talking about me I
have some nice music available and samples to listen to. I will try
to make them make sence and they are of help to me already so I hope
also to other people. I appreciate your oppinion and advice on not
having too many graphics or as litle as possible.

I have a link on the very first FLT/GTR page to the atari page with
optional go to the FLT/GTR pages I hope this is of help too.

Thanks, Raymond Lohengrin

Andrew

From: edaniels@seldon.terminus.com
Message-ID: <828236790_OASIS_@seldon.terminus.com>
Source record: 148153

Here's my dilemma, my provider supplies me with a dynamically allocated IP in the following format:

Computone IntelliServer sm1 - SLIP login
sm1 206.14.40.2 sm_ppp_2 206.14.40.66

The line, sm_ppp_2 is where I've reached an impasse. The number 2 changes each time I log on. $GET_IP seems to grab the first number it finds after the last character in 'FIND ='. I've input sm_ppp_ and gotten the 2, or sm_ppp_? and timed out because there's no '?'. Is there a command/instruction that tells the script to accept the next character as a place holder, it would need to be a wildcard like ? or *, and then execute the $GET_IP? Here's an example:

```
WAIT = 1000
FIND = sm_ppp_(?/*)
RESP = $GET_IP
```

Thanks in advance for your input!

: jmh@io.org (Mike Harrison) inquired discretely:
:
: MH> What is the statue of the Codeheads these days? Are they
: MH> still in business and/or supporting their products?
:
: Tragically, they are out of business. It may be possible to contact
: John or Charles via Genie, and I'm pretty sure that Sir Smedley
: listed Tomas on his 'Atari email list'. Product support is sure to
: be pretty sketchy, but most (all?) of their STuff works pretty well
: as is. I have Warp9, CodeKeys, MultiDesk, and the CodeHead
: Utilities, and haven't even been tempted to call them - no need. The
: manuals are great, the software is stable, and all of
: comp.sys.atari.st is right here, awaiting the call to action :)
:
: MH> Are shareware payments still accepted?
:
: None of the CodeHead STuff is shareware. Charles and John have
: released some shareware under their own names (or Little Green
: Footballs). Of course, they are entitled to shareware payments if
: you use their STuff. 'Pay the man'.
:
: MH> Can anyone suggest a shareware file selector which they like
: MH> more that Little Green?
:
: 'Fraid not. The only thing better than Little Green is Universal
: Item Selector, at least among the American-made prgs. IMHO. UIS is
: commercial, about $19, and worth every penny. I have not tried
: Freedom, Boxkite, Selectric, or ???. Others can tell you about those.

We had 3 local stores carrying Atari World in Winnipeg. Atari World was not "trivial" and will be sorely missed. I hope someone resurrects it quickly.

Tell your newsagent or computer store to contact Worldwide Magazine Distributors
at 1-800-233-1679
Fax 412-962-1186
PO Box 16 Sharpsville PA 16150

They distributed both Atari World and ST Format and many other UK Brit mags.

Chances are if they were getting ST Format they were already dealing with this distributor and could have gotten Atari World as well.

Look for ESSCD64 at the umich site under Archivers or at one of the umich mirror
sites. Then you can uuencode/decode mimeencode/decode with the best of them.
If you like the program be sure to register it so support continues.

5704. Fontverter upgrade ??

Newsgroup: comp.sys.atari.st
Date: 1996-03-31 00:00:00 UTC
From: ross@ra
Message-ID: <4jmkju$q58@thoth.nilenet.com>
Source record: 147965

In last years TOAD catalog they listed the TYPE 1 converter from
MEGA-TYPE as being able to convert True Type fonts also. So I called
MEGA-TYPE about an upgrade and I was told to send in my original disks
(which I made copies of) and that the upgrades would be sent along when
they were completed, which weren't quite finished yet.
So I sent them in..........

That was last September.

I have only been able to speak with a human twice since then, faxed them
3 times and have yet to recieve a response.

Does anyone know if the True Type version was ever released ???

If so I may have to call them again and again until I actuallt get a
response.

ARGHHHH !!!

Hi everyone,

I'm looking for people who are willing to share their experiences with using the Atari for business-purposes, like:

serious bookkeeping, tax-things, in short, all sorts of administration.

I'm asking this because I want to know if I can use the Atari and still be compatible with f.i. my accountant when I start my new business. I've been an Atari-fan for many years now, but I'm afraid I have to switch to PC for non-private activities.

Any serious reactions will be greatly appreciated!

Sander.

HELP!

Well, maybe I don't need to shout.

I remember reading something about making changes to the power supply section of the Stacy so that it could run bigger hard drives, accelerators, etc.

Problem is I forgot to save it to my hard drive. So if anybody has access to this much needed information either post it here or e-mail it to me? I need to fix a Stacy that has gone from rock-solid stable to flakey at best. I am almost 99% sure it is the power supply.

E-mail replies would be GREATLY appreciated.

Thanks in advance!

> does LOOK awesome after all!!...

Okay, so this really has NOTHING to do with the original post, but since
you have PowerUp 2, could you let me (us?) know how well it works?
Maybe some GEM Bench stats or just your general feeling of its utility?
I am thinking of the BlowUp F/X board, but I already have ScreenBlaster
and will probably be getting a 14MB RAM board soon. I also heard that
BlowUp F/X is flakey with 14MB's of RAM and no RAM on the board.

Please e-mail me in addition to posting if you put your answer up here.

Thanks in advance!

Nope. The 15-pin analog joystick ports became "unstandard" on
the Mega Ste! :) Also, many Mega STe's were delivered with TOS 2.05.

Why not? Isn't part of the advertising ahead of release supposed to achieve this effect? Given that there's still no web browser in the package, I'd like to know what exactly it is that's going to have me drooling so much that I want to pay £30 for an enhanced version of what I'm already happity using.

We've all heard a lot of hot air talked about this, now how about some hard facts. Personally I think the thing most people will be heartily disappointed with will be the lack of web browser integrated into the package. We've been told it's coming soon for a very long time and I for one don't want to carry on being fobbed off with that.

Meantime there's a danger of being second in the race to CAB/STiK and the assorted modules which already provide ftp, telnet, IRC, weather, and the imminent e-mail. Can't be long before STiK supports PPP as well now. Is that why we keep getting these kind of postings? Try the truth and let us make our own minds up. If it's so great why isn't it out yet? What problems are you having with the betas?

Please give us one thing or another, not endless carrots on strings. If we were donkeys more of us would be using PCs :-)

Andrew

Well, sounds like your in the same boat as me.. I purchased nearly
everything they made, Fontverter, Megatype, Font Designer Plus and then
sent them in and PAID for the upgrades nearly 3 years ago this summer,
and still have yet to recieve the upgrades.. I've called about every 6
months and get promised that he's about done with the upgrade and will
even ship me the beta version until he gets the doc's updated. Still
nothing.. I'm about ready to give up and call again and tell him to
ship my disks and refund my deposit on the upgrades back NOW!!

> the Quantum Trailblazer drive?

Hi Christian,
Keep away from everything new with the Quantum brand!
They've started doing strange things with their new drives that make it hard
for Atari-users to use them (most other vendors haven't started with such
things yet).
They often need bus-arbitration and that means that you can't use HDX/AHDI and
if you use the hard disk drivers that can handle arbitration (HDDriver,
SCSI-tools, ICD Pro), you still won't be able to boot from the Quantum drive.
You can use it, but you'll need another drive to boot from.
The old Quantum drives work very well, however.

Best regards,

Claes

This is an extract from STR #1213, the most recent to my knowledge. I didn't bother to read the whole thing - it only contains a small section relevant to Atari. Part of that was (deliberately?) truncated, reporting Atari's sell-off of some warehouse stock but neglecting to report what was being sold and what the prices were.

Here is the extract (reported as a review under the "fair use" provisions of the US Copyright law); it consists primarily of something that verges closely on slander. It can only be termed humourous by those who have a very sadistic sense of humour, and a deep-seated hatred for all things Atari:

(begin quote)

Here is a blast from the past. Enjoy. I got a pretty good laugh out of it.

rec.games.video.atari
Jaguar Developer Predicts Future!
Scott Le Grand <legrand>

From mid-1993, ahead of my time, Parenthetical (Don't capitalize parenthetical - Steph) statements mine...

"...founder of the video game industry and (professional ball dropper) the creative force behind some of the world's best-known titles (You mean Atarigames, not Atari Computers, right?), has announced the (destined to be delayed a year or so) launch of a revolutionary new (way to raise hopes and ultimately heartlessly dash them) multi-media entertainment system, the Atari Jaguar. The launch will be (real soon now, honest!) supported by aggressive advertising (two ads on some coffee cans and an informercial), promotion (buy an Atari Jaguar, and send for a FREE MANUAL!) and marketing efforts (Sam Tramiel at the Winter CES screaming "Buy a Jaguar! Or I'll KILL YA!") be centered in the New York market in the fall (5 prostitutes on Times Square wearing nothing but a Jaguar and its peripherals), with a national rollout of the product within one year. (tentatively codenamed: Operation Desert the Lynx Storm)

"The Atari Jaguar, housed in a futuristic casing (Old 520ST cases spraycpainted black), is an (out of date before its release) interactive (you play it, it breaks) multi-media (works on ANY TV) system based on (the assumption that Atari owners will believe anything they hear) an Atari- designed (Uh Oh! Looks like Leonard got his hands on SPICE again!) proprietary 64-bit

RISC(Y BUSINESS) processor. The 64-bit system is four times (16 bits) the technology currently seen in (reruns of Whiz Kids) the market today (tomorrow, or EVER! - S. Tramiel). The Atari Jaguar features over 16 million (design errors) colors in 24-bit true-color graphics (on the case) and produces shaded 3-D polygons (3-D polygons? No such thing... Kind of like Atari marketing) to be manipulated in a "real" world (Sam's World! Sam's World! Atari Time! EXCELLENT!) in real time. The Atari Jaguar also has (no chance) real-time texture mapping and creates spectacular video effects (when you run a coin across its exposed contacts).

"The sound system is based on Atari's proprietary (We could tell you more but then we'd have to kill you), high-speed compared to a TRS-80), Digital Signal Processor dedicated to audio. The audio is 16-bit stereo (broken) CD (player in a swimming pool full of Wesson oil) quality and processes simultaneous sources of audio data (such as the owners (ranting and raving over the absence of software), allowing for very realistic sounds, as well as human voices (Free Sam Tramiel sample "Atari, no mistakes no apologies" included for additional charge), which are essential for future multi-media applications (such as the most creative use of a no software video game).

"The Atari Jaguar is truly expandable (if you put it into an oven and broil it) and will include a 32-bit expansion port (which will never be used just like on the 7800) which allows for future connection into cable (Like anyone in cable will care) and telephone networks (Oh boy, phone phreaking), as well as a digital signal processing port for modem use (which will require the vastly superior Ataritech modem, schedule for April 1st 2000 release) and connection to digital audio peripherals such as DAT players. The unit will also have a compact disc peripheral, which will be double-speed and will play regular CD audio, CD + G (Karaoke) (Sing along with Sam! Doin' the no warez Polka!) and Kodak's new Photo-CD(R).

"Currently, there are multiple software titles in development, which will be available on MegaCart(TM). Atari, known for (never releasing) such groundbreaking 3-D titles as BATTLEZONE 2000 and TEMPEST 2000 will issue (but never complete or release) spectacular new versions for the Atari Jaguar. New 3-D game titles will include CYBERMORPH, ALIEN VS. PREDATOR, JAGUAR FORMULA ONE RACING, and many more (Contest to determine which one gets completed and marketed to be held next year). Atari will license third-party publishers to (go broke and drink themselves to an early grave) join the Jaguar family (Honey, I bankrupted the kids!).

"The Atari Jaguar system will revolutionize the (selection of carts at big lots) state of home entertainment as we see it

today," said Sam Tramiel (who then went on to explain the connection between Elvis, the Men in Black, and Christina Applegate's bust), president of Atari. "The idea of (Atari releasing and supporting) a 64-bit system is earth shattering (so therefore we'll just lead you on and on and on...) and kids and adults will be amazed at (the $h!+ I'll spew to explain why it hasn't been released as the months go on) both the imagery (That Korean factory was flooded with grape Jello just as the first batch was completed, honest!) and manipulative capabilities (My wife Morgan Fairchild, who I have seen naked, actually SAW aliens steal the second batch, yeah that's it). And we are proud that (we can still string you along after all these years) our entry into the multi- media entertainment category will be fully made in America (except for chips, wires, components and casing but hey it worked for Sam Walton so go for it)." The Atari Jaguar will retail for approximately $200 (give or take $300) and (one) will be available nationwide next year. The Atari Jaguar packaged unit will include one software experience (TIC TAC TOE 2000) and a Power (Supply and a) Pad (to beat your head against when you keep asking yourself why oh why did you believe them this time?) (R) Controller with a ten-key pad and other special features (secret key sequence brings up image of Sam Tramiel laughing at you)."

Fooled me once, shame on you...

Fooled me twice, shame on me...

--Larry T./Ass't Sysop

(End quote)

For those of you who have never read ST Report, you have just had a taste of the sort of "impartial reporting" that is typical of ST Rpeort and, indeed, any publication controlled by Ralph Mariano, world-famous Atari-hater and accused defrauder of many prospective Atari purchasers. I say "accused" because the Florida State Attorney General has refused to prosecute; the vast majority of Ralphie's accusers are Europeans, and we all know how Europeans fare in Florida.

Anyhow, this is the reason I do not ordinarily download or read STR, nor do I allow it to be uploaded to STarship BBS. If I want slander, I can go read the Amiga groups. <G> If I want news, there are certainly hundreds of places to get it where the publishers have no axes to grind against Atari in general.

And, Ralph, if you're reading this and you don't like it - sue me. You'll find that I am protected by the same 1st Amendment rights that you are.

(Besides, I have nothing of value to take...)

Oh, yes - look carefully at the list of "never to be released" cartridge titles in that article. You'll see at least 2 that I have played personally; and the Jag CD was released, and even available in several local retail stores both here in the Pacific Northwest, and Houston. I saw them personally.

Don Schoengarth barked in U.COMP.SYS.ATARI.ST on 31 Mar 96:

g> I have rece-#ntly installed a Tweety Board(stereo).This thing will
g> create sound along with a lot of static.Is there anything to do about
g> this.If so what ????

Depending on the particular sounds (and especially with digitized audio),
the Tweety Board's output an be pretty awful. Get a 3PDT switch and wirte
it like this:

```
| | | |
| | | | |
To Amplifiers
```

Basically, this will allow you to switch to monaural sound when the noise
is too awfull.

Hi there!

In <4jf3pk$i4b@blackice.winternet.com>, Rich Mier (rbmier@winternet.com) wrote:
>[...]
> I saw some posts awhile back about some HD drives not
>supporting a partition greater then 256MB and some limilted at 512MB.
>Any truth to this? As far as I read, no one answered the question. I'm
>using ICD PRO utilities. Anyone, speak up.
With TOS prior to 1.04, the partition limit is 256MB, independent from the driver you use. This is because GEMDOS in this versions of TOS can only use up to 32768 sectors with a maximum of 8192 bytes, making a total of 256 megabytes (per partition).

TOS 1.04 to 3.06 (i.e. all versions prior to Falcon TOS) can use up to 65536 sectors with a maximum of 8192 bytes, making a total of 512 megabytes (per partition), independent of the driver you use.

TOS >= 4.01 and MagiC can also access partitions up to 1 Gigabyte (65536 sectors with 16384 bytes, making 1024MB). Although TOS 4.0x seems to be able to cope with partitions larger than that (i.e. up to 2048MB), this is not a good idea because one cluster then has 65536 bytes, which does not fit in 16 bit, making most utilities accessing partitions directly crazy, because they read 0 bytes per cluster (the clsizb-field of the BIOS parameter block is a 16-bit-integer only!)

So, if you want to use your harddrive on all computers, independent of the version of TOS (or better: GEMDOS), do not make your partitions larger than 256MB. Use up to 512MB if you have TOS 1.04 or higher, and up to 1024MB if you have a Falcon or if you use MagiC.

The partition size is independent of the harddisk driver, but it may be that your partitioning software can't create partitions with the maximum size for your version of GEMDOS.

Note: _Never_ write to a partition which is too large for your current version of GEMDOS, i.e. do not write to a 1024MB partition on an ST if you don't have MagiC running. Reading such partitions with the wrong GEMDOS will give you nonsense, while writing will _trash_ it.

Also note that it's best if your partitions all have a bit less than 2^n megabytes. E.g., do not make a partition with 256MB (2^8), use 250MB. If you did, you'd waste much space because the clusters would be twice as large (in the above example 16384 bytes instead of 8192 with TOS 1.04), and any file with data in it needs at least one cluster, no matter how short it is.

As a final statement: Even though it seems you can't get new harddisks with less than 1 gigabyte nowadays, create two or more partitions on them, because this gives you more safety (if one partition crashes, the others stay intact) and also saves some space (because the clusters do not get too large).

Ciao

Thomas

AFAICR the initial betas did NOT support PPP :(

However it will be in the full release version. :)

A full list of new features will have you dribbling all over your
keyboard so I won't list them. Sorry, but just wait, its stunning.

I didn't see the post until noon the next day about the Atari Warehouse sale.
I tried to e-mail in an order, but the mail box was full.
So, I went ahead and faxed it in that afternoon.
$250.00 for a TT. Who could resist?

Mike
